Who will buy CORSA in Jakarta?

Consumer behaviour, social, cultural and economic environment, and the most relevant target customers for CORSA's first international flagship

Prepared by Tiago Reimann, HSG Capstone team | 8 October 2026 | Frameworks: PESTEL (Social, Economic) and CAGE (Cultural, Economic)

1 Goal of the research and limitations

Goal. Identify which Jakarta customers CORSA should target first, and what their behaviour means for **price, product, marketing and the Jakarta financial model**. This answers the scope question "Who are the most relevant CORSA customers in Jakarta?" and the request from Meeting 4 to structure the customer research by category and link it to the financial model and the other teams' work.[1]

Method. Desk research on Jakarta (DKI Jakarta province), compared with Switzerland. **PESTEL** is a checklist of outside forces (Political, Economic, Social, Technological, Environmental, Legal); we use the **Social and Economic** parts. **CAGE** measures the distance between two countries (Cultural, Administrative, Geographic, Economic); we use the **Cultural and Economic** parts. Sources: Statistics Indonesia (BPS), Bank Indonesia (BI), the Ministry of Health, survey and research firms active in Asia (Jakpat, NielsenIQ, Momentum Works), Swiss federal statistics and two team datasets (a Statista Indonesia export and **3,061** Jakarta restaurant reviews).

What this report can say with confidence

- How much Jakarta residents **earn and spend**, and where the money is
- How young urban Indonesians **choose food, pay and order**
- How Jakarta **differs from Switzerland** in income, prices and culture
- Which **customer groups** exist and roughly how large they are

Important limitations

- **No CORSA customer asked yet:** willingness to pay, visit frequency and pasta acceptance are **unknown**
- Many surveys cover **urban Java**, not Jakarta only
- BPS website blocked automated access: BPS figures come **via Databoks and GoodStats**; re-check on BPS
- Benchmarks (Oakberry, Starbucks) show **what can work**, not proof of Jakarta demand

2 Key takeaways

IDR 4.08M
South Jakarta spending per person per month (CHF 190), the highest in Indonesia
BPS Susenas 2025 [2]

48.9%
of Jakarta's 10.72M people are Gen Z or Millennials (about 5.2M)
BPS SUPAS 2025 [3]

Only 19%
of Indonesians would pay 20% more for food with added health benefits
NielsenIQ 2025 [4]

-10.6M
Indonesian middle class: 57.3M (2019) to 46.7M (2025)
BPS via Kontan [5]

Topic	Bottom line
Target customer	· **Primary:** health-aware **young professionals (25 to 39)** around **SCBD, Senopati, Kuningan** · **Community engine:** South Jakarta run and padel clubs (**78%** of runs are group runs)[6] · **Secondary:** higher-income students (trial), expats (about **15,000**; brand image)[7] · **Not** "all Gen Z"
Behaviour	· Eat out often: **63%** at least twice a week[8] · Choose on **price (60%) and taste (59%)**; health **not in the top 10**[8] · **62%** still eat **rice daily**[9] · Delivery is **promotion-driven** (**55%**)[10]; discovery via friends (**44%**) and **TikTok** (**40%**)[11]
Opportunities	· **Highest-spending catchment in Indonesia:** South Jakarta · **Group culture** suits community formats · **Fitness boom** and fully **cashless** payment · **Staff costs** about **18x** lower than in Switzerland
Risks	· **Low ceiling on health premiums**[4] · **Shrinking middle class:** eating out is cut first[12] · **Halal** certification is mandatory[13]; **crowded** coffee market · Delivery fees about **20%** (**2021 to 2022** data); **food costs rise faster** than menu prices
Economics	· Prices are about **one quarter of Swiss levels:** Big Mac **CHF 2.00 vs CHF 7.30**[14,15] (the Big Mac index is a recognised purchasing-power indicator) · Average Jakartan: **IDR 38,000** (**CHF 1.77**) **per day on all food**[2] · **Price in rupiah** for a narrow, wealthier group; never convert Swiss prices
What CORSA should do	· Model the **primary segment** in **Tier 1 districts** · **Three price levels:** entry coffee or snack, core bowl, premium bowl or bundle · **Localise** (halal, spice, rice or grain option); **keep the brand** · Acquire through **run and padel clubs**; use delivery for **discovery**
Still missing	· **Willingness to pay**, **visit frequency**, **pasta acceptance** · High-income **CBD headcount**; current **competitor prices** · How to get them in **90** days: **section 8**

3 Jakarta vs Switzerland: social and economic environment

~26%
Jakarta price level vs Switzerland

18x
lower staff cost (minimum wage vs Swiss hospitality)

CHF 190
South Jakarta spend per person per month

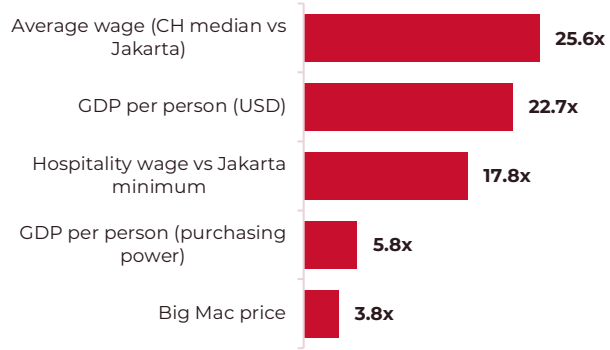

5 vs 79
individualism score: Indonesia vs Switzerland

In short: Jakarta is far cheaper, more group-oriented and more religious than Zurich. Swiss prices cannot be copied, but staff costs are a fraction of Zurich's. Only a few districts, led by South Jakarta, have the spending power a premium concept needs.

Topic	Switzerland	Jakarta / Indonesia	What it means for CORSA
Income	· Median wage **CHF 7,024**/month[16]	· Average wage **IDR 5.9M (CHF 274)**[17] · Minimum wage **IDR 5.73M** (**CHF 267**)[18]	· **Price for the local wallet** · Staff costs about **18x lower**
Food spending	· **CHF 540**/household/month eating out (about **CHF 260** per person)[19]	· **IDR 1.15M (CHF 54)**/person/month on **all** food[2] · Prepared food about **17%** of spending (2024, unverified)[20]	· A CORSA meal competes with **a whole day** of food spending
Price level	· Big Mac **CHF 7.30**	· Big Mac **IDR 43,000 (CHF 2.00)**, cheapest in the index[14]	· Prices about **26% of Swiss**[15] · A **CHF 20** Zurich meal feels like **IDR 110,000** locally
Costs	· Inflation **0.2%** (2025), **1.0%** (Sep 2026)[21]	· Inflation **3.28%** (Sep 2026) · Food, drink, tobacco **4.37%**; **restaurants only 2.70%**[22]	· **Costs rise faster than menu prices** · Review prices yearly
Inequality	· Smaller gaps between areas	· Gini **0.435**, **highest in Indonesia**[23] · South **IDR 4.08M** vs Central **IDR 2.59M** per person[2]	· Target a **micro-catchment**, not the average Jakartan
Culture	· Individualist (**79**) · Low power distance (**34**) · Indulgent (**66**)	· **Collectivist (5)** · High power distance (**78**) · Restrained (**38**)[24]	· **Group formats**, visible **status** · Say **"balanced"**, not "treat yourself"
Religion	· Mostly secular	· About **84 to 87%** Muslim[25] · **Halal mandatory**[13]	· **Halal supply chain** from day one · **Ramadan** hours

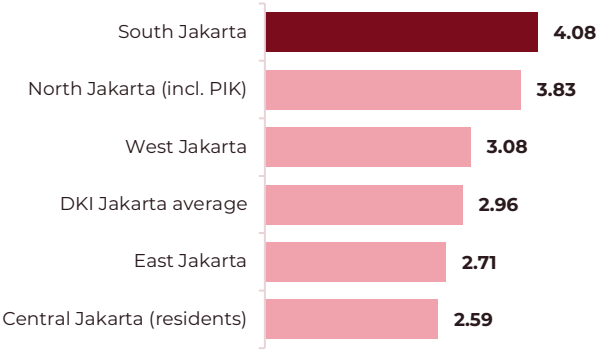

How many times higher is Switzerland?

Switzerland divided by Indonesia or Jakarta [15, 16, 17, 18, 14]

Where the money is in Jakarta

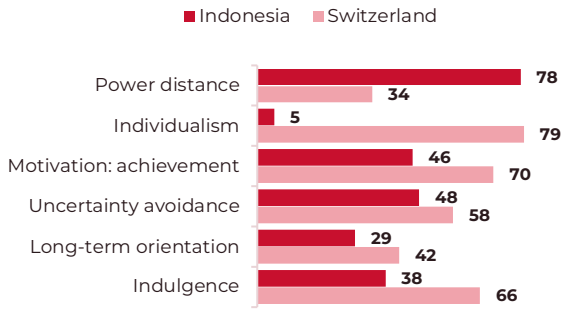

Spending per person per month, IDR million, 2025 [2]

Reading: wages and output are 18 to 26 times higher in Switzerland, but everyday prices only about 4 times, so local purchasing power is closer than exchange rates suggest. South Jakarta (CHF 190 per person per month) is 38% above the Jakarta average.

Cultural profile (Hofstede scores, 0 to 100)

Revised scores; older sources show Indonesia individualism 14 [24]

Keep vs adapt (CAGE cultural distance)

Keep	· **Racing and Italian identity** · Specialty coffee, Mediterranean health promise · Premium design, community
Adapt	· **Halal sourcing:** no pork, no wine-based sauces · **Chilli or sambal** option; **rice or grain** bowl next to pasta · **Group formats**, Ramadan hours, low-sugar drinks
Test	· **Pasta acceptance:** wheat is familiar (**14.5bn** instant-noodle servings a year)[26], but **62%** eat **rice daily**[9] · Meeting concern on wheat pasta:[1] **no data yet**

4 Relevant consumer behaviour in Jakarta

60% / 59%
choose a place on price / taste

63%
actively try to eat healthily

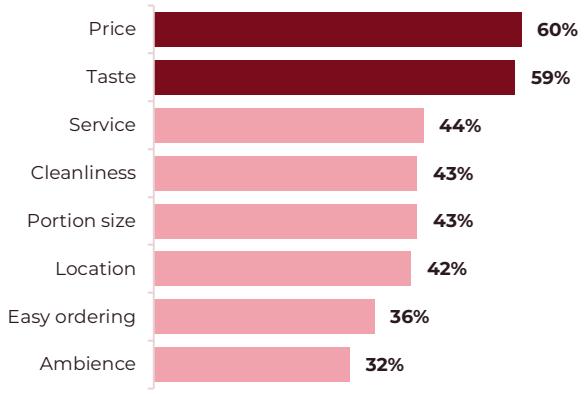

19%
would pay 20% more for health

40%
try new places after TikTok videos

In short: Young urban Indonesians eat out very often, pay digitally and discover places on social media, but they choose mainly on price and taste. Health matters, yet the premium people will pay for it is small. CORSA must win on taste, portion and experience, with health as the reason to feel good about the choice.

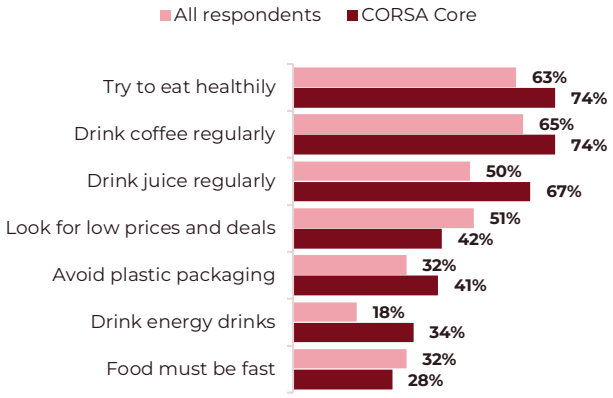

Why young Indonesians choose a place to eat

Share naming each factor, age 15 to 25, urban Java, 2025 [8]

Survey respondents vs the 'CORSA Core' profile

Share agreeing, Statista Indonesia 2026 (online sample); Core n=141 [27]

The 'CORSA Core' filter (defined by the team in Statista; definition to be documented) is more health-oriented, drinks more coffee, juice and energy drinks, and is less deal-driven. Small sample (141; only 67 for 'low prices and deals'): treat gaps under 10 points with caution.

Behaviour	What the evidence says	What it could mean for CORSA	Caution
Eating out often	· **63%** eat out at least twice a week[8] · Main occasions: **dinner 41%, lunch 37%** · Prepared food = **largest food item** nationally[28]	· Design for **weekday lunch** and **after-work dinner**	· Most goes to **cheap warungs (61%)**; modern cafes **26 to 27%**[11]
Taste and price first	· **Price 60%, taste 59%**; health not in top **10**[8] · Flavour mentioned **2x as often** in critical as in positive reviews (**22.5% vs 11.0%**)[29]	· Lead with **taste** and **portion value** · Nutrition = **proof, not headline**	· Urban Java, age **15 to 25**; may exclude Jakarta
Health, with a price ceiling	· **63%** try to eat healthily (**74%** CORSA Core)[27] · **48%** of Jakarta adults **overweight or obese**[30] · Pay **+10%**: **48%**; pay **+20%**: **only 19%**[4]	· Real need, **small premium** · Price like local healthy bowls; **no extra health premium**	· National data, not CORSA's menu
Digital ordering and delivery	· QRIS: **65.8M** users[31] · Delivery **USD 6.4bn**; **55% use it for promotions**[32,10] · Orders: **snacks 49%, drinks 33%**[10]	· **QRIS everywhere** · Delivery for **discovery and drinks**; reward pickup	· About **20% commission (2021 to 2022)**[33]
Downtrading	· **51%** feel a downturn; **eating out cut first**[12] · Yet **61%** would cut essentials for a **viral product**[34]	· Keep an **entry-price** item · Premium must feel **"worth it"** and shareable	· National and Greater Jakarta samples
Snacking	· Snack about **3 times a day** · **89%** loyal to snack brands, **highest of 12 markets**[35]	· **Small bowls, protein snacks, functional drinks**	· No data on meal replacement
Customisation	· **No reliable Indonesian data**	· **Limited, fast choices:** base, protein, sauce, size	· Test in the survey first
Coffee	· **46%** drink coffee **daily**, afternoon peak[9] · Only **23%** of Gen Z pay **IDR 25,000** (**CHF 1.16**) or more[36] · Starbucks **IDR 52,000** (**CHF 2.42**); Kopi Kenangan **IDR 18,000** (**CHF 0.84**)[37,38]	· Specialty at **IDR 35,000 to 55,000** = **top price tier** · Needs a **clear quality or functional** reason	· **Crowded: USD 3.51bn** chain market[39]
Loyalty and community	· **Strongly collectivist** culture[24] · Trial driven by **friends (44%)** and **TikTok (40%)**[11]	· **Group bundles**, "model for two", run-club rewards	· No Indonesian loyalty or subscription data

Checking earlier claims (Preliminary analysis and Meeting 4)

Each claim was traced to its original study.[40] Most come from the **United States**: they show a direction, but they are **not Jakarta evidence**.

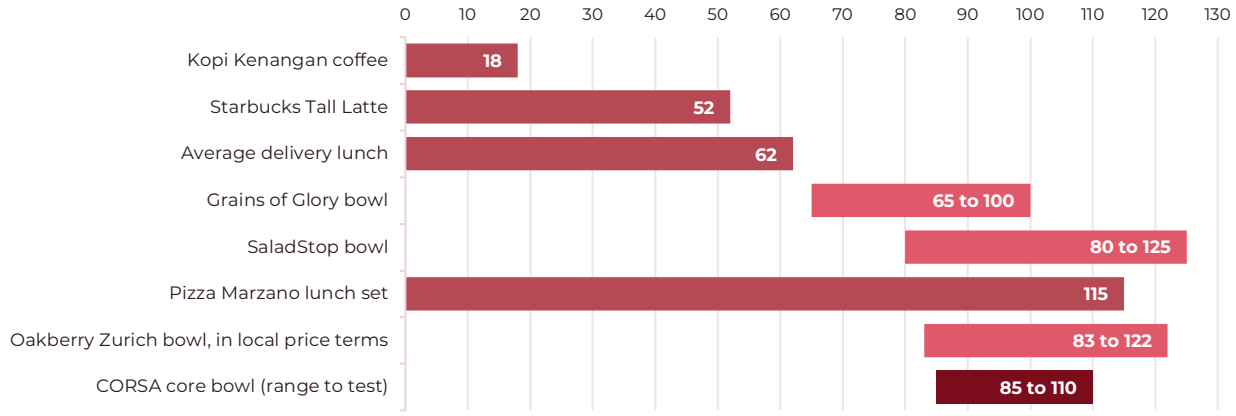

Claim	Verdict	What the evidence says	Use for CORSA
Convenience is the No. 1 reason (72%) for Gen Z and Millennials	True, US 2020	· US survey, over **2,000** people aged **15 to 39**[41] · Indonesian proxy: **73%** say time and money shape their choice[42]	· **Valid direction:** speed and value matter, even for premium
Taste and freshness: 41% of need-based conversations	True, US data	· US social media and menus **2023 to 2025**; **health only 30%**[43]	· Matches Jakarta: **taste beats health**
Young people prefer snacks and small meals	True, incl. Indonesia	· **71%** of Gen Z and Millennials prefer many small meals (**12** markets incl. Indonesia, 2024)[35]	· Supports **small bowls and functional snacks**
Oakberry loyalty: +50% retention, +25% spend	True, vendor claim	· Thanx case study of Oakberry's US app; **self-reported, no control group**[44]	· Shows an app's **potential**; not proof for Jakarta
56% cite healthfulness (Meeting 4)	True, US/Canada	· IFIC 2026: taste **88%**, price **78%**, convenience **61%**, **healthfulness 56%**[45]	· Same ranking as Jakarta: **health after taste and price**

Benchmark: Oakberry and Jakarta price anchors

Oakberry	Evidence	Lesson for CORSA
Simple, scalable product	· Founded 2016; **about 1,000 stores** by May 2026[46] · Two core products, three sizes, **unlimited toppings for one price**[47]	· Keep the **menu short** · Let customers choose **within a fixed price**
Asia is not proven	· Indonesia: **4 stores, all in Bali** (since Nov 2023); Jakarta and Surabaya **"planned"**[47] · **None** in Singapore, Malaysia or Hong Kong	· **No Oakberry in Jakarta yet**, but it may arrive · Western success **does not prove** Jakarta demand
Price	· Zurich bowls **CHF 14.90 to 21.90** (delivery app)[48] · At Indonesian price levels (about **26%**): **IDR 83,000 to 122,000**	· Matches local healthy bowls (**IDR 50,000 to 125,000**)[49] · **Supports the core bowl range** in section 7
Investment	· **IDR 1.5 to 2.5bn (CHF 70,000 to 116,000)** per Indonesian shop · Payback **24 to 36 months**[47]	· Small-kiosk reference for CORSA's **CHF 200,000** frame · CORSA's **120 to 180** sqm flagship is **much larger**

Jakarta price ladder: where a CORSA bowl would sit

IDR thousand per item; restaurant menu prices exclude 10% tax and 5 to 10% service. Bars = price range; single prices shown as one value [38, 37, 10, 49, 48]

Healthy-bowl prices come from 2023 menu lists and are probably 10 to 20% higher today. The CORSA range (dark red) sits with local healthy bowls, well above an average delivery lunch.

5 Relevant consumer megatrends

65.8M
QRIS users (Jun 2026), up from 28.8M in 2022

78%
of South Jakarta runs are group runs

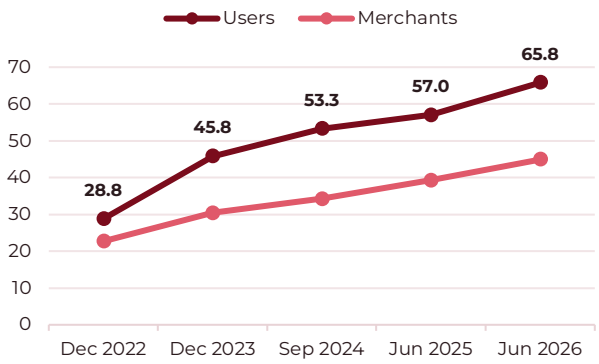

-10.6M
middle class since 2019

87%
of Indonesian employees work fixed office days

In short: Six trends matter for CORSA. Cashless payment, community fitness and health labelling are tailwinds. A shrinking middle class and a promotion-driven delivery market are the main headwinds. Trends were kept only if they change who buys, how often or at what margin.

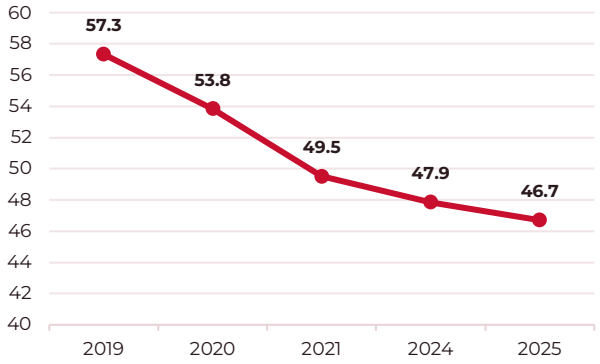

Cashless is now standard: QRIS growth

Millions, Bank Indonesia checkpoints [31]

Headwind: Indonesia's middle class is shrinking

Millions of people, BPS definition; 2022 and 2023 not shown [5]

Trend	What is happening (data)	Opportunity or risk	Limitation
Cashless and app-first	· QRIS users **28.8M** (2022) to **65.8M** (Jun 2026) · Transactions **doubled** in a year · Food and drink = **largest category** (**35.9%**, Sep 2024)[31]	**+ Opportunity** · Fast checkout · Payment-linked loyalty	· Expected, **not a differentiator**
Community fitness	· South Jakarta: **78% group runs**, world's highest[6] · Marathon: **31,000** runners in 2025, **double** 2024[50] · Jakarta: **326 padel courts**[51]	**+ Opportunity** · **Low-cost acquisition** via clubs · Post-workout bowls and drinks	· Small, trend-driven group
Health and sugar labels	· **Nutri-Level grades (A to D)** decreed Apr 2026: on menus and delivery apps, large businesses first[52] · Sugary-drink tax **postponed**; excludes in-store drinks[53]	**+ Opportunity** · **Grade A or B drinks** beat sweet local coffee	· Timing unclear · Sweet toppings hurt credibility
Social and viral discovery	· TikTok reaches **180M** Indonesian adults[54] · **40%** try places after creator videos; **48%** drawn by opening promos[11]	**+ Opportunity** · Launch with **creators and run-club events** · A **shareable** store	· Viral demand **fades fast**
Value-seeking consumer	· Middle class **-10.6M** since 2019[5] · Middle-class job share **14% to 8%**[55] · Confidence still positive (**118.5**)[56]	**- Risk** · **Fewer regular buyers**; top segment more stable	· Model a **conservative** frequency
Back to the office, along the MRT	· **87%** of Indonesian employees work fixed office days[57] · MRT riders **46.5M** (2025), up from **40.8M**[58] · CBD office occupancy **76.3%**[59]	**+ Opportunity** · Reliable **weekday lunch and coffee** near stations	· A quarter of CBD space empty; **high rents**

6 Potential customer segments

23 / 30
score of young CBD professionals, the highest

3.3M
formal workers in Jakarta

0.94M
people commute into South Jakarta daily

~15,000
expat workers: too few for volume

In short: Six groups were compared. Young professionals working or living around SCBD, Senopati and Kuningan score highest: concentrated near the planned sites, out on weekdays and able to afford a premium meal more than once a week. The fitness community is smaller but is the best way to reach them. Students and expatriates support, but are not the core.

Segment	Who and how many	Spending power	Needs	Price sensitivity	Likely purchases	Main risk
A. Young CBD professionals (25 to 39)	· **3.3M** formal workers in Jakarta[60] · Est. **360k to 540k** CBD desk workers (from CBRE floor space)[59] · **0.94M** commute into South Jakarta daily[61]	· **Medium to high** · Avg wage **IDR 5.9M** (**CHF 274**)	· Fast lunch, coffee · **Healthy and premium** · **87%** in office on fixed days[57]	Medium	· Weekday lunch, coffee · **1 to 3x a week** (to test)	· Many earn the average wage · Intense lunch competition
B. Affluent South Jakarta residents	· Highest spend: **IDR 4.08M (CHF 190)** per person/month[2]	· **High**	· Weekend brunch, dinner · Social visits, status	Low	· Weekends, evenings	· Small, scattered · **Very demanding**
C. Running and padel community	· **31,000** marathon runners[50] · **326** padel courts[51] · South Jakarta: world leader in group runs[6]	· **Medium to high**	· Post-workout **protein** · Functional drinks, **belonging**	Low to medium	· After training, events	· Small, trend-driven
D. University students	· **837,400** students in Jakarta[62]	· **Low: 48%** of Gen Z spend under **IDR 10,000** per coffee[36]	· Cheap, social, shareable	Very high	· Occasional; entry products	· **Low ticket** · Discount dependence
E. Expatriates	· About **15,000** foreign workers (2024), likely an undercount[7]	· **High**	· Familiar Western food · Healthy options	Low	· Regular if close by	· **Too small** for volume
F. Families and groups	· Households of about **3.7** people (North Jakarta **3.72**)[63]	· **Medium**	· Sharing, kid-friendly · Malls, **Ramadan** group dinners	Medium to high	· Weekends, holidays	· Pasta for families **untested** · Long stays

Segment comparison (team scoring, 1 to 5)

Higher is better; based on the evidence above, to be revalidated

	A	B	C	D	E	F
Size	4	3	2	4	1	4
Spending power	3	5	4	1	5	3
Frequency	4	3	4	3	3	2
Fit with CORSA	4	4	5	3	4	2
Easy to reach	5	4	4	3	3	3
Evidence	3	2	2	3	2	2
Total (max 30)	**23**	**21**	**21**	**17**	**18**	**16**

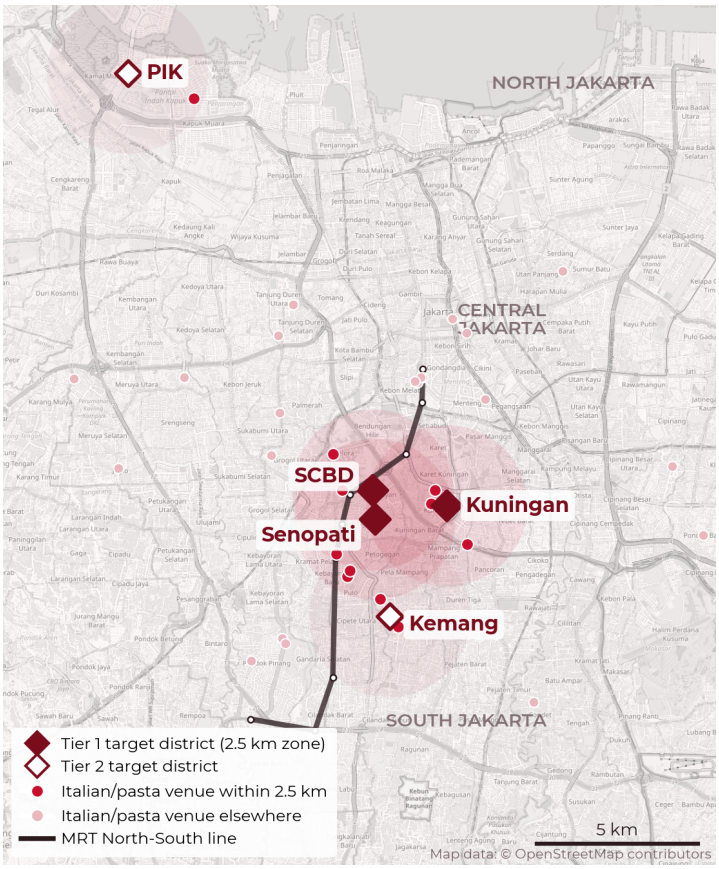

Why A is the primary target

- **Only group** combining scale, concentration near Tier 1 sites, a **weekday** habit and premium income
- **B and C overlap** with A (same districts, same age): together they form the **core**
- **D and E:** entry products and brand image; **F:** test later (weekends, PIK, malls)

What would change this choice: if fewer than about **1 in 5** CBD workers would pay the core bowl price weekly, shift towards residents (B) and a smaller format.

Target districts, competitors and MRT

Italian and pasta venues from the team's review dataset [29]; base map [64]

12 of 36 venues lie within 2.5 km of a target district; their average rating is **4.68**, so CORSA's Zurich **4.9** is **not a unique advantage** locally.[29]

7 Opportunities, risks and implications

19%
would pay 20% more for health

CHF 267
Jakarta minimum wage vs CHF 4,744 Swiss hospitality

~20%
delivery commission (2021 to 2022 data)

+4.4% / +2.7%
food cost vs menu price inflation

In short: Findings are ranked by the two project indicators: money affected (cash flow and profit) and people affected (reach and engagement).[1] The biggest money questions are price and visit frequency. Neither is known yet; both can be tested before signing a lease.

Finding	Type	Money	People	Implication and action	Who uses it
Health premium ceiling	- Risk	High	High	· Only **19%** pay **+20%** for health[4] · Healthy bowls (**IDR 80,000 to 125,000**)[49] already cost **1.3 to 2x** a delivery lunch (**IDR 62,356**)[10] · **Stay within the competitor range**; justify with portion, taste, experience	Finance: price, ticket
Downtrading	- Risk	High	High	· Eating out is **cut first**[12] · Model a **conservative** visit frequency; keep an **entry product**	Finance: scenarios
Staff cost advantage	+ Opportunity	High	Low	· **CHF 267** vs **CHF 4,744** per month[18,16] · Invest in **service speed**: slow service in **27.9%** of competitors' critical reviews[29]	Finance: staff plan
South Jakarta wallet, CBD traffic	+ Opportunity	High	Med.	· **Highest spend** in Indonesia; **0.94M** daily commuters[2,61] · Choose sites by **daytime population and income**	Location team
Delivery economics	+/- Mixed	Med.	High	· **USD 6.4bn**, but **55% promo-driven**[32,10]; about **20% commission** (**2021 to 2022**)[33] · Model delivery **net of fees**; push drinks and pickup	Finance; operations
Community and collectivism	+ Opportunity	Med.	Med.	· Individualism **5 vs 79**[24]; world-leading group running[6] · Clubs, "model for two", group bundles may **lower acquisition cost**, high in the first months[1]	Marketing; benchmarking
Halal requirement	! Must-have	Med.	High	· **Mandatory** for medium and large firms since Oct 2024[13]; **84 to 87%** Muslim[25] · Budget **certification and halal sourcing** (cheese, stocks, no wine)	Operations; legal
Cost inflation	- Risk	Med.	Low	· Food, drink, tobacco **+4.37%** vs restaurants **+2.70%**[22] · Food costs must **grow faster** than menu prices in the model	Finance: costs
Sugar labels, coffee crowding	+/- Mixed	Low	Med.	· Nutri-Level can **reward low-sugar drinks**[52] · Coffee is **crowded** (**USD 3.51bn**)[39]: position as **specialty or functional**	Product

Inputs for the Jakarta financial model

Model input	Evidence-based starting point	Range to model	Confidence
Exchange rate	· **1 CHF = IDR 21,500** (8 Oct 2026)[65]	· **+/-10%** (rupiah fell about **10%** vs USD in a year)	Strong
Core bowl price	· **IDR 85,000 to 110,000 (CHF 3.95 to 5.12)** before tax and service · In line with local healthy bowls[49] and Oakberry Zurich in local terms[48,15]	· **IDR 75,000 to 125,000** · Add **10% tax** and **5 to 10% service**	Medium
Specialty coffee price	· **IDR 40,000 to 50,000 (CHF 1.86 to 2.33)** · Between Kopi Kenangan (**IDR 18,000**) and Starbucks (**IDR 52,000**)[37,38]	· **IDR 35,000 to 55,000**	Medium
Visits per core customer	· **No Jakarta data**	· **1 to 3 per month** (conservative) to **1 to 3 per week** (optimistic)	**Missing**
Delivery fee	· About **20% commission** plus promotions (**2021 to 2022**, unverified for 2026)[33,10]	· **20 to 30%** of delivery sales	Weak
Staff wage floor	· **IDR 5,729,876 (CHF 267)**/month in 2026, **+6.17%** a year[18]	· **+6%** per year	Strong
Food cost growth	· Food, drink, tobacco **4.37%**; volatile food up to **6.21%**[22]	· **4 to 6%** per year	Strong
Seasonality	· **Ramadan:** daytime demand falls, evening and group demand rise; **8 in 10** plan to spend more[66]	· One month with shifted hours	Medium

8 What we know, what we still need to know, and how to get it

7
low-cost research actions in 90 days

150 to 200
intercept interviews in Tier 1 districts

30 to 50
blind taste testers

~22 Oct
family office introduction

In short: The environment is well documented. What is missing is direct evidence from CORSA's own target customers. Seven low-cost research actions in the next 90 days would replace the biggest financial-model assumptions with real numbers.

Question	What we know	What is missing	Why it matters	How to get it
Can the target customer afford CORSA?	· Incomes, spending, price anchors by district · **Strong**	· Price acceptance for **CORSA's menu**	· Sets **ticket size**, the largest revenue driver	· **5-minute intercept survey (n = 150 to 200)** in SCBD, Senopati, Kuningan · Show **three price levels**
How often will they come?	· Eating-out frequency of young urban people · **Medium**	· **Visit frequency** for a premium bowl	· Frequency x customers = **daily orders, break-even**	· Same survey · **Pop-up or partner counter** with tracked repeat visits (Meeting 4 idea)
Will they like pasta bowls?	· Wheat noodles common; rice daily · **Medium**	· **Taste acceptance** of CORSA recipes	· Menu, waste, **food cost**	· **Blind taste test:** 3 core vs 3 localised recipes, **30 to 50** target customers
How many target customers per site?	· Commuters, floor space, occupancy · **Medium**	· **Headcount and income** in specific towers	· **People affected**; site choice	· **Lunchtime foot-traffic counts** · Broker and landlord data; family office contacts (via Samuel)
What do competitors charge, how busy are they?	· Selected menu prices; **3,061** reviews · **Medium**	· **On-site prices**, queues, table turnover	· Price positioning, **capacity plan**	· **Store visits** and delivery-app price scan of **15 to 20** venues in Tier 1 districts
Do community and subscription formats work?	· Strong group culture; subscription claims **unverified** · **Weak**	· Interest in run-club offers, "model for two", meal packs	· Acquisition cost, **cash timing**, loyalty	· **Two run-club or padel events** with tracked codes · Survey question on subscription types
What do young Jakartans think of CORSA?	· National surveys only · **Medium**	· Views of **Jakarta-based** young adults	· Secondary segment, **social reach**	· **Poll of 50 to 100 students** via HSG partner Universitas Gadjah Mada (Meeting 4 proposal, with Samuel's approval)[m]

Next step: run the **intercept survey, price test and taste test** together in **one Jakarta field week**, coordinated with the family office introduction planned for around 22 October.[m] Results feed directly into the **base, conservative and optimistic scenarios** of the business case.
