CORSA Jakarta: Preliminary Financial overview

Jonas Vuillaume · 9 October 2026 · Based on CORSA Jakarta Financial Model v0.5.1

Status: Most figures are model estimates that have not yet been validated with operators, brokers, suppliers or a lawyer. IRR and 5-year payback are pending.

1. Investment summary

A 150 m², 60-seat CORSA flagship on Senopati's main road needs about IDR 5.09bn (CHF 236k). At 200 guests a day it earns IDR 153m (CHF 7.1k) EBITDA a month, a 20.8% margin [1]. The CHF 200k equity leaves a gap of IDR 772m (CHF 36k). The open question that could change the funding picture most is the legal structure for a foreign-owned company, not the build cost [2, 3].

Metric	Base case	Range (Conservative to Optimistic)
Total investment	IDR 5.09bn (CHF 236k)	IDR 4.37bn to 7.45bn (CHF 194k to 364k)
Gap vs CHF 200k equity	IDR 772m (CHF 36k)	Surplus of IDR 127m (CHF 6k) to gap of IDR 3.35bn (CHF 164k)
Monthly revenue at maturity	IDR 736m (CHF 34k)	IDR 482m to 1,084m (CHF 24k to 48k)
Monthly EBITDA at maturity	IDR 153m (CHF 7.1k), 20.8% margin	IDR −89m to 430m (CHF −4.4k to 19.1k)
Break-even	128 guests/day, IDR 15.7m/day (CHF 727)	93 to 210 guests/day
Year 1, including ramp-up	Revenue IDR 7.30bn (CHF 338k), EBITDA IDR 952m (CHF 44k); cash never goes negative	Base only
IRR and 5-year payback	Pending: the model is being extended beyond year 1	Pending

Source: CORSA Jakarta Financial Model v0.5.1 (Dashboard, Scenarios and Funding sheets) [1]. *Scenarios also flex the exchange rate (IDR 20,500 to 22,500 per CHF; Base 21,600)* [4].

The case holds if three things are true:

- The venue reaches about 200 guests a day
- Guests accept prices near the in-zone average
- A workable legal structure exists for a CHF 200k entry

None of the three is validated yet.

2. Concept

CORSA, a Swiss brand, would open a flagship in Jakarta to test its format in Indonesia: an all-day venue serving specialty coffee and healthy Mediterranean food. The working case is a 120 to 160 m² unit with 60 seats, open 07:00–22:00, selling dine-in, take-away and delivery. Prices are pitched at the smart-casual level of South Jakarta's lifestyle districts (see section 3).

3. Location options

Six districts remain in play. Three of them earn almost the same modelled EBITDA, about IDR 153–156m (CHF 7.1k) a month: PIK, SCBD and Senopati main road, the working case. They get there in

different ways: PIK on low rent, SCBD on higher assumed demand, Senopati in between. Monthly figures at Base maturity, year-1 prices, sorted by EBITDA [1]:

District (tier)	Median asking rent (IDR/m²/month)	Listings	Rent and service charge, 150 m²	Share of revenue	Demand vs Senopati main road	Estimated EBITDA
PIK (2)	91k	3	IDR 13.7m (CHF 0.6k)	2.0%	0.95	IDR 156m (CHF 7.2k)
SCBD (1)	409k + 120k service charge	2	IDR 79.3m (CHF 3.7k)	9.8%	1.10	IDR 154m (CHF 7.1k)
Senopati main road (1)	252k, estimated	1	IDR 37.8m (CHF 1.7k)	5.1%	1.00	IDR 153m (CHF 7.1k)
Senopati side streets (1)	111k	10	IDR 16.6m (CHF 0.8k)	2.5%	0.90	IDR 132m (CHF 6.1k)
Kemang (2)	146k	12	IDR 21.9m (CHF 1.0k)	3.5%	0.85	IDR 105m (CHF 4.9k)
Kuningan (1)	284k + 50k service charge	2	IDR 50.1m (CHF 2.3k)	7.6%	0.90	IDR 98m (CHF 4.6k)

Working case highlighted. Occupancy benchmark: rent and service charge at 8–10% of sales [5, 6]. *Demand levels are team judgements.*

SCBD needs its assumed 10% extra demand just to match the main road, because its rent and service charge are about twice as high. Senopati side streets trade an assumed 10% less demand for 56% lower rent. Kemang and Kuningan fall behind mainly on lower assumed demand, and Kuningan also on rent. PIK looks strongest on paper, but it is Tier 2 and outside the zone used for competitor pricing, so its demand level is the least tested.

The ranking rests on the demand column and on thin rent samples outside Kemang and the Senopati side streets. Footfall counts and the district scoring, planned with gravity models [7, 8], will decide between them.

The rent evidence is 30 asking-rent listings of 100–200 m² from Jakarta property portals, collected 6–8 Oct 2026 [9–20]. Deals usually close 5–15% lower. Senopati main road has one listing, an upper floor at about 289k per m² [16], so the model estimates it as side-street rent times a 2.27 main-road premium. Mall space is much dearer: IDR 564k per m² plus IDR 154k service charge on average [21], in a retail market where occupancy is tightening [22, 23]. Shop-house (ruko) leases typically run at least 12 months, paid 1–2 years upfront [9, 10].

4. Revenue and pricing

At maturity the venue takes IDR 23.6m (CHF 1.1k) a day from 200 in-store guests and 25 delivery orders, about IDR 736m (CHF 34k) a month [1]. Lunch and dinner bring 74% of in-store revenue. Prices are net of the 10% Jakarta restaurant tax (PBJT), which is passed on to guests [24, 25].

Daypart	Guests or orders/day	Average net spend (IDR)	Revenue/day (IDR)
Morning (07–11)	45	65k	2.93m
Lunch (11–15)	75	120k	9.00m
Afternoon (15–18)	35	70k	2.45m
Dinner (18–22)	45	140k	6.30m
Delivery	25 orders	115k	2.88m
Total	**200 guests + 25 orders**	**103k per in-store guest**	**23.55m**

Events and retail add IDR 29m (CHF 1.3k) a month. The model assumes the venue opens at 55% of mature volume and reaches 100% after 9 months, although some chains open above normal and settle later [26]. Seats are not the constraint: at typical dwell times of about an hour [27–29], 60 seats on 60% of the floor [30] could serve far more than the 140 dine-in guests a day assumed. For

scale, Fore Coffee's stores average about IDR 4.7bn of revenue a year [31]; the Base case implies IDR 8.8bn. Regarding daypart revenues, more inputs on Indonesian lifestyle required.

Pricing sits below the local market. Competitor menus were collected for 22 Italian venues in Jakarta [32]. CORSA's placeholder pasta prices sit below most of the target zone, which leaves headroom [33–35]:

Item	CORSA (placeholder)	Casual	Target zone (smart-casual)	Mall and hotel Italian
Pasta	82–135k	~80k	118–165k (average ~133k)	148–190k
Latte	50k	27–30k	38–48k	55–60k

Dine-in prices, net of PBJT [32].

Volume is the weak point. 200 guests a day is above every measured pasta comparable in the dataset [32]. The estimations considers an efficient system with lower time per order. Delivery-app prices run about 15.6% above dine-in [32, 36], and platform commissions average about 22% of the order, weighted by market share [37, 38].

5. Unit economics

Base earns a 20.8% EBITDA margin at maturity and breaks even at 128 guests a day, which leaves a 36% safety margin above break-even. Conservative does not break even: it needs 210 guests a day but assumes 155. Figures are monthly at maturity, year-1 prices [1].

	Conservative	Base	Optimistic
Guests/day	155	200	255
Average net spend per guest	IDR 93k	IDR 103k	IDR 116k
Revenue	IDR 482m	IDR 736m (CHF 34k)	IDR 1,084m
Variable costs (food, packaging, delivery, fees, marketing)	IDR 230m	IDR 310m	IDR 406m
Fixed costs (staff, rent, utilities, overheads)	IDR 341m	IDR 273m	IDR 247m
EBITDA	IDR −89m	IDR 153m (CHF 7.1k)	IDR 430m
EBITDA margin	−18.6%	20.8%	39.7%
Break-even guests/day	210	128	93

The Base margin looks generous against benchmarks, and needs further justifications for investors. Food cost is in line, but staff and rent sit below what restaurants usually pay [5, 6, 39]:

Cost as % of revenue (Base)	Model	Typical range
Food and beverage cost	29.3%	28.5–30.3%
Staff	22.7%	26.9–29.4%
Prime cost (food + staff)	51.9%	up to 60–65%
Rent and service charge	5.1%	8–10%

Staffing is 17 people on two shifts, at IDR 167m (CHF 7.7k) a month including social security and the 13th-month bonus [40, 41]. Every salary is above the 2026 Jakarta minimum wage of IDR 5.73m [42], and levels follow published ranges [43–49]. An expatriate general manager is not included and would add about IDR 40–60m a month, enough to cut the Base margin by roughly a third.

Other operating costs use published rates: electricity at the PLN business tariff and a benchmark consumption [50, 51], water and gas [52, 53], card and QRIS payment fees [54, 55], and marketing, maintenance and waste at industry rates [56–58].

6. Investment and funding

The Base investment of IDR 5.09bn (CHF 236k) is half build-out and half cash tied up before and after opening. Rent paid upfront and the working-capital reserve together account for IDR 1.16bn (CHF 54k) [1].

Block	IDR	CHF	What it covers
Hard costs	2.60bn	120k	Civil works and MEP, interior and furniture, design fee, kitchen and coffee equipment, signage, POS; includes 11% VAT, which restaurants cannot reclaim [25, 59, 60]
Soft and pre-opening costs	0.84bn	39k	Company setup, licences and permits, launch marketing, recruitment and training, opening inventory, pre-opening payroll [61, 62]
Contingency	0.34bn	16k	10% of hard and soft costs [63]
Lease	0.60bn	28k	2 months' rent during fit-out, 12 months prepaid, 2 months' deposit
Working-capital reserve	0.70bn	33k	3 months of fixed costs excluding rent
Total	**5.09bn**	**236k**	

The CAPEX is based on unit-cost estimates, not quotes. Three equipment prices disagree with dealer list prices converted to IDR [64–68]: the combi oven looks about 50% too high, the espresso machine about 20% too low and the grinders about 35% too low. Leasing part of the equipment is being evaluated as a way to cut the upfront amount.

Funding the gap. The CHF 200k equity (IDR 4.32bn) leaves IDR 772m (CHF 36k) to find. The model assumes a 48-month loan at 10.5%, based on the prime lending rate plus a risk premium [69, 70]. Local banks rarely lend to a newly formed foreign-owned company without collateral, so a loan from Switzerland to the parent, or a shareholder loan, is the more realistic route.

Legal structure is the bigger question. A foreign-owned company (PT PMA) needs IDR 2.5bn (CHF 116k) of paid-up capital per business line, which the equity covers. It must also declare an investment plan of more than IDR 10bn (CHF 463k) per business line, about twice this project [2, 3]. Unless that plan can be met over time with more outlets, alternatives such as a local partner holding a CORSA licence or franchise, or a joint venture, may be needed. As a PT PMA the company would pay standard corporate tax, not the 0.5% small-business rate [71], and must withhold 10% tax on rent [72]. This rests on BKPM Regulation 5/2025 as described by consultancy sources and has not been confirmed by a lawyer.

7. Risks and sensitivities

Price and guest volume decide the outcome; cost lines matter far less. No single ±20% move turns Base into a loss, but Conservative, which combines several smaller moves, does [1].

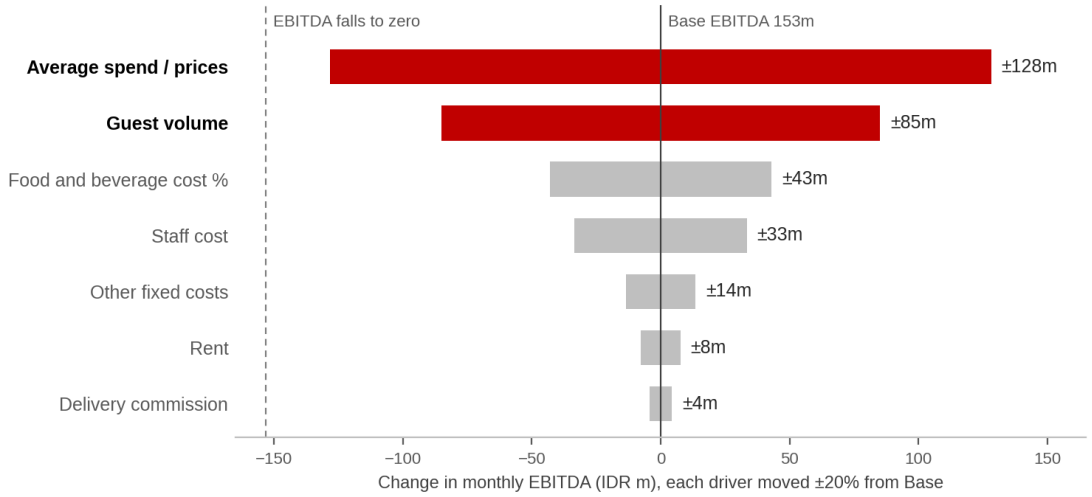

Figure 1. Swing in monthly Base EBITDA when each driver moves ±20% on its own. Source: model Sensitivity sheet [1].

A Monte Carlo run of 1,000 draws around Base [73] gives monthly EBITDA between IDR 60m and 251m (CHF 2.8k to 11.6k) in 80% of cases, and a 0.6% chance of a loss. It ignores ramp-up and is centred on the unvalidated 200 guests a day, so it shows the spread, not the odds of success. This Monte Carlo is meant to give a range and need further refinements.

Risk	Effect on Base	Possible mitigation
Fewer guests than 200 a day	−20% volume cuts EBITDA by IDR 85m a month; at 155 guests the venue loses money. In a US study, about 26% of restaurants failed in their first year [74]	Footfall counts at comparable venues, operator interviews, smaller unit if needed
Prices not accepted	−20% spend cuts EBITDA by IDR 128m a month	Position against the competitor price ladder; test the menu with Pillar 1
Legal structure	The IDR 10bn investment-plan rule could block or reshape a CHF 200k entry [2, 3]	Indonesian lawyer; compare partner, licence and joint-venture routes
Lease terms	Rent is paid 1–2 years upfront; a second prepaid year adds about IDR 450m (CHF 21k) of cash need	Broker quotes and negotiation
Cost drift	Wages are assumed to rise 6.2% a year against 4% for menu prices, which squeezes margins over time [42, 75]	Revisit pricing yearly; automation and staffing concept
Exchange rate	Equity is in CHF, costs in IDR; scenarios run from IDR 20,500 to 22,500 per CHF [4]	Fund in tranches; hold the reserve in IDR
Seasonality	Ramadan starts around 8 Feb 2027; chains report both uplifts and dips [76, 77]	Test the seasonality index with local operators

8. What must be true, and how we will test it

Five conditions carry the case. Each one is still backed by desk research only.

Condition	Evidence so far	Next test
At least 130 guests a day to break even, 200 to hit Base	No measured pasta comparable reaches 200 [32]	Footfall and dwell-time counts at 3 comparable venues per district; operator interviews
Average net spend near IDR 103k (CHF 4.8) per guest	Target-zone pasta prices of 118–165k support it [32]	Final menu and price ladder with Pillar 1
Food and beverage cost at or below 30% of sales	Industry benchmarks only [5, 39]	Recipe costing with Jakarta supplier prices, or imported goods.
A legal route for a CHF 200k entry	Consultancy summaries of BKPM Regulation 5/2025 [2, 3]	Indonesian lawyer: PT PMA thresholds and alternatives
Senopati rent near IDR 250k per m² with workable upfront terms	One main-road listing [16]	Broker quotes for 120–180 m² units, with deal rents and lease terms. More locations must be tested.
