Recap

01 · RECAP

Overview

The meeting advanced the capstone proposal for Corsa by reviewing customer research, the financial case, Indonesian research and the possible Zurich hybrid location. **Tiago** presented findings on healthfulness, portion sizes, customization, subscriptions and the social experience of a venue; **Samuel** asked for the research to be structured and prioritized, while **Jonas** and **Samuel** discussed how to assess customer and community impact in forecasts. **Jonas** is still researching restaurant-specific costs of goods sold and margins. **Paul** raised possible implications of Indonesian collectivism, power distance and dietary norms, but said Indonesia-specific evidence was still needed. **Samuel** said menu, operating, staffing, margin and equipment evidence was not yet visible in the material he had seen.

Samuel set the deadline for research and other material in Drive at lunchtime on 9 October, with review by him and **Joshua** that day; **Matthieu** was asked to share links by Wednesday at the latest, and **Jonas** expected more reliable margin figures in a couple of days. **Samuel** also said the capstone would continue over the next 2 to 3 months. The group agreed not to adopt Gemini Notebook for now, not to contact Indonesian restaurants for now, and not to share project documents outside the group; **Tiago** may send the adjusted project-scope document with the red title page to the university. The meeting clarified these working constraints, but did not settle the feasible overall scope, the group's purpose beyond Corsa's existing research, or the Zurich site's size and customer-facing design. No next meeting date, time or place was specified.

02 · RECAP

Main topics

Research Coordination and Review

16 min · **Samuel** and **Tiago**

Samuel said weekly meetings could focus on what the group had done, but stressed that results arriving just before a deadline would leave too little time for review and adjustment. He said the capstone would continue over the next 2 to 3 months and that work after 9 October mattered as much as work before it. Progress updates could continue, but **Samuel** said he needed to see a paper or screen sharing to judge whether the work was sufficient; the exact weekly meeting format was not settled.

Samuel asked the group to share research through the group chat and Drive, with a brief explanation and link, so others could find and understand the material. He asked Matthieu to share links by Wednesday at the latest and urged the group to collect and share data during the remaining research days. Samuel initially requested uploads by 6 p.m. on the 8th, then corrected the deadline to lunchtime on the 9th so he and Joshua could review the materials that day. He asked Tiago to organize Team A's folder and Paul to organize Team B's, including evidence, references and source files.

Tiago proposed Gemini Notebook, formerly NotebookLM, to connect project files and relate findings across team members' research. Samuel declined adopting the setup for now, citing the cost of upgrading company employees' accounts and the need for the group to learn to work together remotely; Tiago offered his subscription, but Samuel remained unconvinced that sharing it was possible. Tiago later asked about connecting Drive to his Gemini notebook and said he did not think he could connect it because it was not his cloud account. Samuel suggested upload notifications and downloading files.

OUTCOME Materials are due in Drive by lunchtime on the 9th for Samuel and Joshua's review, the folder work was assigned, and the NotebookLM setup was not adopted for now. (18:08, 33:15, 36:46)

Customer Research and Forecasts

15 min · Tiago, Samuel and Jonas

Tiago presented customer research comparing Oakberry and Starbucks. He reported that 56% valued healthfulness, 80% of Oakberry customers liked customizability, and 78% of Gen Z and 67% of millennials liked meal-based subscriptions. He also described interest in both smaller and larger portions, and said customers may value a place to hang out and a sense of belonging as well as the food. Tiago committed to structuring the findings in a report, while Samuel asked for categorized, prioritized material presented with both text and graphics.

Samuel advised keeping Oakberry in view and comparing competitors on features with substantial effects on cash flow or community, rather than minor marketing details. He cautioned that Starbucks had bet on location and size, with many locations closing because they were too large for students staying for hours, and cited vouchers as a cash-flow-related feature. Jonas asked how findings should inform forecasts, noting high customer-acquisition costs in the first weeks and months of opening in Indonesia. Samuel proposed assessing money and people affected; Jonas added lasting reach and likelihood of retention, while Samuel said community effects should be listed even if initially hard to measure.

Jonas was researching restaurant-specific cost of goods sold and margins in relation to a targeted ROI, but said his figures were still broad and that he expected more reliable figures in a couple of days. **Samuel** noted that menu, operating data, staffing, margins and equipment research were not yet visible in the material he had seen, while accepting that the work could take more time. Later, **Tiago** offered a roster to help the team enter figures in the financial model and test whether assumptions made sense; **Jonas** described this as trial and error. No precise method for measuring impact or completed cost figures were established.

OUTCOME **Tiago** will structure the customer findings and **Jonas** will continue the cost and margin research, while the forecasting measures and final comparison scope remain unsettled. (03:05, 11:13, 14:09)

Indonesian Customer Research

15 min · **Samuel**, **Tiago** and **Paul**

Paul explained Hofstede's cultural-dimensions framework, saying Indonesia is highly collectivist, with group belonging, social norms and family highly important, and that power distance could matter for operations. He said he still needed concrete Indonesia-specific data and raised, without establishing it, the possibility that wheat-based Italian-style pasta might fall outside accepted dietary norms. **Samuel** saw collectivism as a possible opportunity for Corsa and asked the group to consider how it could apply. He requested about five bullet points and asked whether a subscription, family or two-person model would fit.

Tiago first proposed emailing Jakarta universities and successful companies for insight into people who visit restaurants with a similar profile. Later, he proposed contacting Indonesian restaurants because menus do not show what customers actually order or how they choose between Western and Indonesian-style dishes. **Samuel** said nobody should contact Indonesian restaurants for now because interviews relate to Corsa's investors and he would handle them. As an alternative, he suggested checking for an HSG collaboration with an Indonesian university, identifying the one with the most students and possibly arranging a quick call.

Tiago identified the University of Gadjah Mada as an HSG partner in Indonesia, reporting 55,000 students and collaboration with the University of Sangam. Samuel suggested a short poll of 50 to 100 students from a possible group of 1,000, although the intended maximum poll duration was uncertain between two and five minutes, and also mentioned possible school and teacher input. Jonas offered a contact who studies electronics and possibly robotics at an Indonesian university and works as a Jakarta SME's head of marketing. Samuel said not to share project documents with outside contacts, while authorizing Tiago to send the adjusted project-scope document with the red title page to the university. Samuel also raised unresolved menu questions about herbs and sautéed chicken.

OUTCOME Restaurant contact is prohibited for now and outside contacts must not receive project documents; Tiago may send the adjusted scope document, while the university approach, poll and cultural and menu research remain open. (23:31, 39:32, 43:55)

Zurich Hybrid Location

8 min · Samuel, Tiago and Paul

Samuel said he and Joshua were aligned on finding a new Zurich location for cash-flow reasons, describing a pop-up in practice that would not be marketed as a pop-up and would run for at least one year. He described a hybrid site using robotics and people, not a fully autonomous or human-run location, and said the team was working with ETH and hoped for an official connection. The size remained unclear: Samuel said it could be less than six square meters and that 30 to 40 to 50 to 100 square meters would be welcome, while later saying five to seven square meters was the minimum for fresh food and supply.

Paul suggested adapting an electric-vehicle charging-station pizza vending machine concept to sell pasta. Samuel said Corsa would need a higher-quality approach and that fresh food and supply made a very small machine unsuitable, citing five to seven square meters as a minimum compared with vending machines around one square meter and two meters high. Jonas offered a robotics club connection at ATA, but Samuel said Corsa was already pursuing students and professors and that support could be requested if needed. Tiago argued that customers seeing a robot make pasta would be more compelling than pressing a button; Samuel said the first hybrid location in Jakarta had not settled whether to show the kitchen, and that product experience and execution mattered more than live cooking.

OUTCOME The hybrid concept remains under consideration, but the site, size and whether customers will see the kitchen or robot remain unresolved; neither the vending-machine idea nor the robotics-club connection was adopted. (50:50, 52:44, 55:03)

03 · RECAP

Key points

- **Tiago** reported that 56% of customers in his research valued healthfulness, 80% of Oakberry customers liked customizability, and 78% of Gen Z and 67% of millennials liked the idea of a meal-based subscription. (03:05, 04:08, 06:54)
- Research and other material must be in Drive by lunchtime on 9 October for review by **Samuel** and **Joshua** that day; **Samuel** corrected his earlier reference to 6 p.m. on the 8th. (36:03, 36:46)
- **Jonas** was researching restaurant-specific cost of goods sold and margins for a targeted ROI and expected more reliable figures in a couple of days, while **Samuel** said menu, operating data, staffing, margins and equipment evidence were not yet visible in the material he had seen. (14:09, 14:45)
- **Paul** said Indonesia was identified as highly collectivist by the framework he consulted, but concrete Indonesia-specific data on power distance was still needed; he also raised, without establishing, whether wheat-based Italian-style pasta might fall outside accepted dietary norms. (23:31, 24:47)
- The Zurich hybrid concept would combine robotics and human beings and would not be fully autonomous, but the minimum site size remained unclear between references to less than six square meters and five to seven square meters, and the Jakarta kitchen's visibility was undecided. (50:50, 51:37, 55:03)

04 · RECAP

Ideas discussed

Offer multiple portion sizes

Tiago proposed offering smaller and larger portions based on his Oakberry research. **Samuel** praised the example and asked him to include it in structured research, but no implementation decision was made. (03:05, 04:08, 05:33)

Explore meal subscriptions

Tiago proposed subscription plans for drinks, food, or both, with different plans and limits, as a potential source of recurring income. **Samuel** asked for the idea to be written down; it was not adopted as a decision. (06:54, 07:26, 08:19)

Assess broader impact

Samuel proposed judging impact by money and people affected, while **Jonas** added whether effects last and lead to customer retention. **Samuel** said community benefits should still be listed even when they are difficult to measure. (11:13, 12:24, 13:13)

Use collectivism as opportunity

Samuel asked the team to develop about five points on how Corsa could use collectivism and consider subscription, family or two-person customer models. **Paul** had raised collectivism as a possible factor, but its relevance still required research. (24:47, 26:24)

Find a Zurich pop-up

Samuel proposed finding a cheaper Zurich location so that money could go toward a robot, describing a hybrid site using robotics and people and inviting the group to share location leads. The site's size and details remained unsettled. (50:02, 50:50)

05 · RECAP

Decisions

01 The group will not adopt the proposed Gemini Notebook or NotebookLM setup for now. (33:15)

02 No one will contact Indonesian restaurants for now; **Samuel** will handle the interviews related to Corsa's investors. (39:32)

03 Project documents will not be shared with contacts outside the group. (43:55)

04 **Tiago** is authorized to send the adjusted project-scope document with the red title page to the university. (43:55)

05 Research and other materials are due in Drive by lunchtime on 9 October 2026 for review by **Samuel** and **Joshua** that day. (36:46)

06 **Samuel** and **Joshua** are aligned on finding a new Zurich location for cash-flow reasons. It should operate as a pop-up but not be marketed as one, and run for at least one year. (49:16, 50:02)

07 The Zurich concept will be a hybrid location using robotics and people, not a fully autonomous site or one run only by humans. (50:50, 51:37)

06 · RECAP

Next actions

Tiago

TASK	DUE
Write a structured report of the customer research, categorize and prioritize the findings, and include graphics as well as explanatory text. (03:05, 05:25, 06:37)	No date
Provide a roster to help with the financial model. (20:19, 21:00)	No date
Find a suitable folder structure for Team A. (37:27)	No date
Send the adjusted project-scope document with the red title page to the university. (43:55)	No date

Jonas

TASK	DUE
Continue researching restaurant-specific cost of goods sold and margins and produce more reliable figures. (14:09)	In a couple of days
Reach out to his friend in Indonesia about whether he can provide relevant insights or help. (42:58, 45:59)	No date
Send Samuel his friend's LinkedIn. (45:59)	No date

Paul

TASK	DUE
Find a suitable folder structure for Team B. (37:27)	No date

No owner

TASK	DUE
Put research and other materials in Drive for review by **Samuel** and **Joshua**. (14:45, 36:46)	By lunchtime on 9 October 2026
Prepare about five bullet points on how Corsa could use Indonesian collectivism as an opportunity, including whether a subscription, family, or two-person model might fit. (25:48, 26:24)	No date
Share research in the group chat and Drive with a short explanation and a link. (27:07, 29:54, 30:44)	No date
Share links on the work. (27:07)	Wednesday at the latest
Check the HSG connection with Indonesian universities and identify the university with the most students. (39:32)	No date
Call **Samuel** beforehand with the name of a possible Indonesian university. (39:32)	No date
Keep an eye on the project-scope questions. (45:59)	No date
Let **Samuel** know about any suitable Zurich location leads. (50:02)	No date

07 · RECAP

Open questions

- How much of Corsa's requested work, including work packages 1, 2, and 3 and the additional work packages, is realistic within the capstone's available time and capabilities, and how should the group build on information Corsa has already collected? (14:45, 18:08, 19:07)
- What specific menu, operating, staffing, margin, and equipment evidence is needed, and how should customer, cash-flow, and community impact be assessed for the forecasts?
  Raised by **Jonas** (10:36, 11:54, 14:45)
- What Indonesia-specific evidence is available on collectivism, power distance, and dietary norms, and what does it mean for Corsa's food and customer models, including subscriptions, family or two-person options, herbs, and sautéed chicken?
  Raised by **Paul** (23:31, 24:47, 26:24, 46:48)
- How should the group approach an Indonesian university, and will it arrange a call or run a student poll, with what scope and duration?
  Raised by **Samuel** (39:32, 40:20, 41:39, 42:23)
- What size and specific site will the Zurich hybrid location have, given references to less than six square meters and to five to seven square meters as a minimum?
  Raised by **Samuel** (50:50, 52:44)
- Will the kitchen or robot be visible to customers in the first hybrid location in Jakarta?
  Raised by **Samuel** (55:03, 55:51)

08 · RECAP

Per person

Samuel

As Corsa's representative, he guided the research priorities, review process, outreach boundaries, and discussion of the Zurich hybrid location.

POINTS MADE

- He emphasized giving advance notice about work and asked for research to be structured, categorized, prioritized, and supported by graphics and explanatory text.
- He advised keeping Oakberry in view, comparing high-impact competitor features, and considering Starbucks vouchers and oversized locations as examples affecting cash flow or community.
- He proposed assessing impact by money and people affected, while still listing community benefits that may be difficult to measure initially.
- He said menu, operating, staffing, margin, and equipment evidence was not yet visible, and emphasized time for review and adjustment before deadlines.

- He asked the group to consider how Indonesian collectivism could benefit Corsa, including through community and subscription, family, or two-person customer models.
- He expected research to be shared in the group chat and Drive with a short explanation and link, rather than kept separate.
- He corrected the materials deadline from 6 p.m. on the 8th to lunchtime on the 9th, when he and **Joshua** would review them.
- He declined the Gemini Notebook proposal for now and said nobody should contact Indonesian restaurants because he would handle investor-related interviews.
- He suggested checking for an HSG collaboration with an Indonesian university, identifying the university with the most students, and potentially arranging a quick call.
- He proposed a poll of 50 to 100 students from a possible group of 1,000, limited to two or five minutes, without finalizing its scope.
- He proposed first approaching Indonesian university leadership broadly to explore a poll, interviews, or related projects, rather than starting with specific requests.
- He said project documents must not go to outside contacts and authorized **Tiago** to send the adjusted project-scope document with the red title page.
- He raised unresolved questions about Indonesian cultural and menu preferences, including which herbs to use, whether to offer sautéed chicken, and project-scope questions.
- He suggested downloading Drive files after enabling upload notifications and invited **Tiago** to share requirements for improving the meeting-summary tool.
- He said he and **Joshua** were aligned on finding a cheaper Zurich location for cash-flow reasons, describing a hybrid site using robotics and people.
- He said the Zurich hybrid site would not be fully autonomous or run only by humans, and mentioned Corsa's work with the University of ETH.
- He said fresh food and supply require a larger setup than a small vending machine, leaving the Zurich site's minimum size unclear.
- He said the team had not decided whether to show the kitchen in its first hybrid location in Jakarta.
- He questioned whether showing a robot making pasta would remain a selling point, and said Corsa should prioritize execution until it has greater resources.

Tiago

As a capstone group member, he presented customer research, proposed Indonesian research outreach and collaboration tools, and shared information about an HSG partner university.

POINTS MADE

- He reported that 56% of customers in his research valued healthfulness, while Oakberry customers liked multiple portion sizes, including portions that were not too large.
- He reported that 80% of Oakberry customers liked customizability and proposed offering different sizes at Corsa for customers seeking lighter or larger meals.
- He reported that 78% of Gen Z and 67% of millennials liked meal-based subscriptions, suggesting different plans for drinks, food, or both, with limits.
- He said customers may pay for a venue's vibe, a place to hang out, and a sense of belonging as well as food.
- He proposed emailing Jakarta universities and successful companies to learn about customers at similar restaurants, identifying the inquiry as a university group project.
- He proposed Gemini Notebook as a way to connect team members' files and research, and offered to share his subscription.
- He proposed asking Indonesian restaurants how customers choose between Western and Indonesian-style dishes, noting that menus do not show what people actually order.
- He identified the University of Gadjah Mada as an HSG partner in Indonesia, reported 55,000 students, and mentioned collaboration with the University of Sangam.
- He noted that a suggested 6:30 call would be almost midnight in Indonesia and said the timing made no sense.
- He asked about connecting Drive to his Gemini notebook, then said he likely could not connect it because it was not his cloud account.
- He argued that customers watching a robot make pasta would be more compelling than simply pressing a button to receive it.

TASKS

- Write a structured report of the customer research, categorize and prioritize the findings, and include graphics as well as explanatory text.
- Provide a roster to help with the financial model.
- Find a suitable folder structure for Team A.
- Send the adjusted project-scope document with the red title page to the university.

Paul

As a strategic advisor, he discussed Indonesian cultural factors and raised a possible dietary-norm concern, then proposed a pasta vending-machine concept.

POINTS MADE

- He explained that Hofstede's framework identifies Indonesia as highly collectivist, with group belonging, social norms, and family important, depending on the evaluation.
- He identified power distance as potentially important to operations, said he still needed concrete Indonesian data, and raised a possible concern about wheat-based Italian-style pasta.
- He said the country-comparison website was quick to consult and that prior familiarity with the framework made the work easier.
- He proposed adapting a pizza vending machine at an electric-vehicle charging station into a vending machine for pasta.

TASKS

- Find a suitable folder structure for Team B.

Jonas

As Team B's data analyst, he discussed how to assess customer impact for forecasts, reported restaurant-cost research, and offered potential Indonesian and robotics contacts.

POINTS MADE

- He asked how customer research should inform forecasts, noting that customer-acquisition costs are high during Indonesia's first weeks and months of opening.
- He argued that impact assessment should consider whether reach lasts and whether people remember the brand and may become customers.
- He reported researching restaurant-specific cost of goods sold and margins for a targeted ROI, with more reliable figures expected in a couple of days.
- He described entering figures and examining the results as a trial-and-error approach to the financial model.
- He offered a potential Indonesian contact who studies electronics and possibly robotics and works as a Jakarta SME's head of marketing.
- He offered to connect Corsa with the robotics club at ATA and said its students focus on robotics hardware.

TASKS

- Continue researching restaurant-specific cost of goods sold and margins and produce more reliable figures.
- Reach out to his friend in Indonesia about whether he can provide relevant insights or help.
- Send **Samuel** his friend's LinkedIn.

Points to double-check

From an automatic check (gpt-6-luna). Some may be false alarms.

NEXT ACTIONS Share links on the work.
Samuel specifically asked **Matthieu** to share links by Wednesday, not the group generally.

OPEN QUESTIONS What Indonesia-specific evidence is available on collectivism, power distance, and dietary norms, and what does it mean for Corsa's food and customer models, including subscriptions, family or two-person options, herbs, and sautéed chicken?
Paul raised the cultural and dietary questions, but **Samuel** raised the specific questions about herbs and sautéed chicken.

Transcript

00:23 **Samuel** Hello. Hello, can you hear us? Do you hear me? Like I said, I'm in a lecture. I'm only able to listen. Oh, okay. All right. Perfect. Perfect. So great. And we were almost everything. Did anyone get an update from Anna on what she was working on?

00:47 **Tiago** Not yet. And why? I had a rough weekend. I listened on person things, but I didn't really take the time. I'm sorry.

01:10 **Samuel** Okay. The reason is because Anna gave us a message 20 minutes before the meeting. So, as I said, communication is really important, but 20 minutes before a meeting nobody can react. So I take that as a reminder for the future, guys, that whenever you have something, let us know in advance. We cannot work on last minute like 20-minute reminders or something. So take it as a future rule that we let each other know beforehand so that our employees, our partners can react to what we do. Then, who would like to start? Who would like to start? Show us a bit on what he or she worked, he worked on.

02:04 **Tiago** I can start. Yes. On my side, I started building some customer profiles based on the strategy used by Oakberry but also by Starbucks because I think Starbucks is also relevant. If our... wait, I took some notes, sorry. If the target group are young professionals, students, people that are also more connected to also like to globally like to internet and everything, so like active young individuals, how it's written in the documents. I thought Starbucks was also somewhat relevant on some aspects, on how they and also because there are more studies about the Starbucks customer base than from Oakberry because Oakberry is pretty recent.

03:05 **Tiago** And I found some interesting numbers that I can share, and I'm gonna add them to a report at the end on the Google Drive so everybody can take a closer look at it. But some relevant points I wanted to share was, of course, taste is the most important aspect, but we knew that. But something that we also, with price and convenience and healthfulness of 56% healthfulness, which everyt until now everything aligns with Corsa. Something that I thought interesting is that having access to multiple size options, a lot of things that people liked about Oakberry was that the portions were not too big, which I think is kinda weird.

04:08 **Tiago** But some people are just looking for something small to eat and fast to eat, and that's something they liked at Oakberry. If we adapt this at Corsa, I think the way this could be adapted would be to have different sizes. I don't know if that was also already the case in Zurich. But having a smaller option for people that are not that hungry but just want to eat something, as well as something that people can eat if they're really hungry. Also, 80% of customers like that at Oakberry, the fact that it's customizable. I saw strong demand for having the ability to customize their food.

05:08 **Tiago** Which I think I mentioned in the first meeting, but I'm not sure. I think I really agree with this point.

05:20 **Samuel** **Tiago**. Do you have all of this written down somewhere?

05:25 **Tiago** Yes, but I have just notes I took, but I'm gonna write a document with all the points structured.

05:33 **Samuel** Okay. Because what I saw from now until now is that you really have a good eye in terms of research, and especially, for example, the example you made right now with the different sizes, and last time we talked about something else that was quite remarkable to have written down. The real important thing is here that once you have all of that together, please put them into categories. I know you will make that, but I'm just saying it as a that I said it. Put it into categories and make it structured.

06:14 **Samuel** Yep, structured, of course, but the thing is with text is that people nowadays, even myself sometimes, may not read to the end. So put the working things

06:28 **Tiago** on top. And do you like graphs? Graphs, like graphical illustrations. I don't know. I know I like it.

06:37 **Samuel** I mean, I mean graphical, yeah, of course. I love everything that is somehow visible with colours and stuff. But with graphs, the thing is you cannot go into detail. So I think both is important.

06:54 **Tiago** Just the 2 last points I wanted to make today, because I already thought about this last meeting and I ended up forgetting to mention it, was I had this idea, and the research I made confirmed this idea, not on purpose. 78% of Gen Z and, like, 67% of millennials said that they liked the idea of having a meal-based subscription.

07:26 **Tiago** My first idea was maybe, of course, I could have some sort of a subscription-based plan for the drinks where you pay a monthly subscription and you have access to, let's say, drinks with a hard cap of, like, I don't know, really, if you wanna have, you can have different plans. This could also be applied to food and drinks, and you could have different times. The good point with the subscription-based idea would be that nobody gets food 20 times at the same place, or, like, goes every day. Some people will do maybe, but not everyone. Absolutely. But you have this constant income.

08:19 **Samuel** We discussed this before, but I think that's 100% something to be written down.

08:25 **Tiago** Mm-hmm. And the last point is that when people buy at Starbucks or Oakberry, they're not only paying for the food, they're paying for the vibe, to have a place to hang out, and for this sense of belonging, which could also be adapted. But that's some really initial research. I want to go deeper on some points, and also if it brought you some ideas, I'm happy to get some other perspectives I could deepen. That's

08:56 **Samuel** it for me. In terms of the question, which competitors or comparable concepts already exist, I really would love to have the approach here still to have an eye on Oakberry because the thing is with Starbucks, in the end, they had and they will close many locations right now because they were also betting on the location, on the size, and then they were too big for students to come for hours and just have a coffee and those things.

09:32 **Samuel** So if there are some good parts about the concept, and I'll make an example for Starbucks, they launched an app, I don't know how many years ago, but I think in the last 2 or 5 years, where you can put a certain amount of money as a Guthaben, how do you say that in English? A voucher. A voucher.

09:58 **Samuel** And Starbucks quickly became somehow a bank, a small bank, or maybe big bank, because everyone was buying the vouchers or got some, yeah, cash flow running

food, yeah. And if we compare with other competitors, then please only with necessary things that have a big impact on cash flow or big impact in terms of community, but, like, big-impact things. Let's not compare small running gags or small things in terms of marketing or something. Unless it's all query. Unless it's Oakberry. Yes, you want us?

10:36 **Jonas** Yeah, I mean, these are really interesting insights, and the thing is, if I also, like, on my side, we're gonna do some modeling, forecast things, and these are, I mean, since we're gonna open in Indonesia, customer acquisition costs are really high in the first weeks and months of opening. These are really interesting, but we would also need to know whether they are really relevant so we can also take them into account when we do our forecasts. So maybe do you already have an idea about that? Because I've done like... Yes. There are

11:13 **Samuel** 2 indicators, the 2 easiest. One is money, cash flow, the other one is the amount of people that will be affected. Yeah. Just ask yourself those 2 things. If you have a certain amount of money that is affected, like a big amount of money in terms of the concept, and you get some numbers from the financial team soon, you will realize, okay, I think that's important. And that's why I said structure it from top to bottom, because you will find things that may not affect many people, which sound important but are not really. So those 2 things, I would say, are the most important indicators.

11:54 **Jonas** Yes. So the optimal would be to have, for the smallest amount of money, the largest impact possible in terms of people getting affected, right? If they get affected in a positive way, of course. Yeah, in a positive way, of course. Yeah. But positive, like, in terms of TikTok, you can have millions of views without having any impact because the average watching time is 2 seconds, so it doesn't have a lasting impact.

12:24 **Jonas** So we should also assess a bit more qualitatively, like, okay, we reach X persons, but is it a lasting impact, and what's the likelihood that they actually retain our name and our possibly future customers, right?

12:39 **Samuel** I mean, yes. Yes, but the thing is, going viral on Instagram or TikTok can also affect the community in a positive way that you don't see, that you cannot measure in the beginning. But from time to time, you realize, oh my God, this place is full. Why are the people making pictures? Why do they meet here? So I would say the example of **Tiago** before, in terms of what people liked, is that they have a place to hang out as well.

13:13 **Samuel** Is something that you can't really measure in amount of people right now, and you cannot really tell how much money you have to spend because in the end you should spend almost zero money on community. But list it on the list. At least you have it on. That's what **Joshua** said today to **Marius**. I don't wanna read it wrong, but I think he said something like, "Oh, sorry, it's in finance. It's in the finance chat." Try to fill out the first numbers, try to fill out the first texts. There is no wrong or right because you are estimating. Yeah. Okay. Another thing, **Tiago**, or good to go for **Paul**? Yeah.

13:59 **Samuel** Or let's maybe let's first do the group market entry. I think if it makes more sense to not maybe, sorry, **Paul**. Yeah, you want

14:09 **Jonas** us. Any other points? Not really. I mean, from aside, like, I'm doing, like, for research on, like, basically what's the optimal, like, for a restaurant-specific cost of goods sold and, like, margin you can have, like, to get your ROI, like, targeted. But it's not, like, really of relevance yet. It's still quite broad and it's bizarre, but I think I'll be able to have, like, some

really proper figures, like, in a couple of days when I'll have, like, more time to really dive into

14:45 **Samuel** Okay, what you mean by a couple of days? I think next week. This week I have to get a look at the timeline again. Give me a second. On the 9th of October, right? Yeah. But then we have to the expectation for today was that you guys show us what type of documents you prepared, what type of research you prepared, what did you collect, and where do you need maybe a little bit more, you know, impact on something or support? Because right now we don't see anything in terms of the menu of operating data or staffing or margins, equipment, whatever. Yeah.

15:37 **Samuel** I have no problem with that. You guys need a little bit more time, but then again, if you tell us, we could have postponed the call maybe to the 7th of October. Yes, **Matthieu**? Two

15:55 **Tiago** times. The mic.

16:08 **Samuel** We cannot hear you? Yeah, no, we can, I think.

16:22 **Tiago** Not here? Why, wait, can I just share an idea I had? It's really quick. I was thinking about emailing some universities in Jakarta and some successful companies there also to get more insights about the type of people that go to the restaurants that have a similar profile, saying that it's for group projects from the University of Sangal

17:04 **Samuel** Let's, sorry, give me one second because **Matthieu**, I will.

17:19 **Tiago** Wait, I have an idea.

17:22 **Samuel** I have an idea too, so let's call him. Yeah, that's what I have to do. Can you hear me, guys, now? Yeah. Okay, good. Okay, no way, it's not working. So what I wanted to say, this one about the remark that for me, I that the weekly meetings were supposed just to take what we did and not to point a specific moment. I was supposed to be building some more, if you understand what I mean, or that. Yeah, I understand what you mean. I understand what you mean.

18:08 **Samuel** But if we think about delivering the some final results the day before or like the deadline, we need some time to go through, and then you need some time to adjust it. So I know you are students and you're used to learn and put information in your head in the way, really last second. I did it the same for many years, but in terms of the capstone project, I don't think that's, I don't think that would work for the next 2, 3 months to continue like that, because I can already tell it's not an exam that we fulfill on the 9th of October. It's where we have to like work on.

19:07 **Samuel** So everything after the 9th of October is as important as what we do today. It's not like we can fulfill something on the 9th and then it's done and we can keep going maybe on the 12th. So having said that, yeah, we can keep it to that you guys just show us what you did in the meantime. But if I don't see a paper or not a screen sharing, I know it's not enough. Okay, yeah, we can, I understand this, it's a bit more fun. Just for my part, I have a presentation to do that's due tomorrow.

19:59 **Samuel** So still I have to work, and during the work weekend, so it's time, it's more than I plan for entering on Wednesday after the presentation. Like the whole day. Yeah. Yeah, I'm not sure. I think it does.

20:19 **Tiago** Yes, sorry, guys. Yeah, but kids crying. Yeah, I think we should just focus on the next steps. We can also call, I don't know, Thursday. It's okay for me. We just need to move on and deliver something. I think this is what you mean, Sandy. Yes, for the financial model, for my part. I can give you a roster that will help you a lot, then you don't have to spend too much time on Excel sheets already, and just start, and then you get a feeling for the numbers, you know.

21:00 **Tiago** 'Cause each time you put something in, you think about, is this really something? And then at the end you look at the, I don't know, like, on the flow or on the result, and then you know, okay, this is the right thing or this is not the right thing, and does it make sense or not?

21:30 **Jonas** Yeah. Just trial and error.

21:37 **Samuel** Okay, then we had **Tiago** **Matthieu**. In terms of culture and geography, I'm assuming, sorry, I'm assuming that, yeah, you will go through the work during this week. Is that okay? Yeah, it's only, sorry, I had you on mute. Say it again. Easily fine. Okay. Then, yeah. **Paul** for also **Marius**. Yes. Are you familiar with the cultural dimensions of Geert Hofstede? Of Geert Hofstede, that's the author of the original research. No, show me something new today.

22:35 **Paul** I will show you. I compared **Joshua**. Do you have, have you heard about it? I don't know if I can send you the link, I think, but I'm on your screen sharing. Sorry.

22:56 **Samuel** No. Does it work? I don't share. I don't think I should screen. You can send it to me and I can share it as well. Whatever. Yeah, okay. You have to share a screen sign, this with a mitten nach oben. Yeah. Müsste es eigentlich kein gesamter Bildschirm oder so. Aber ich sag. I think. Here. How it works. Yes. Yes. Basically, the original work of the house.

23:31 **Paul** I've written a paper about this last semester. It compares, I think, over 100 different countries in different cultural aspects, how they are similar and where they diverge. And what I found very interesting for Indonesia, for one, is the difference in the acceptance of power distance, which will be very important for the operational business. But more importantly, individualism versus collectivism. The next step for me would be to see what data I can find on how collectivist Indonesia is, as it's one of the most collectivist countries in this evaluation worldwide. Depending on the exact evaluation, but generally, one of the most collectivist countries in the whole world. Collective what? Kollektivisch. Kollektivist. In

24:43 **Samuel** One sentence in German, sorry.

24:47 **Paul** Also wenn man Individualismus versus Kollektivismus vergleicht, ist Indonesien mit der höchsten Bewertung als kollektivistisch einzustufen. Which means that they have very high emphasis on belonging to a group and adhering to social norms. Family has the highest priority, which I'm afraid could have a negative impact if a wheat-based Italian-style pasta, for example, is seen as something that does not stick to the norm that they accept as part of their diet. I know for the Philippines there is data on especially how rice fits into the culture. I still have to see what concrete data there is for Indonesia that I can use.

25:48 **Samuel** Great stuff and really important for everyone to know. It's a big chance. I chose Indonesia because I know they bet on community, and I've seen it in Hong Kong, where it's insane. You can take a Danish bakery that just recently opened, and people go crazy

about it, and they go crazy about it together. Run clubs in Hong Kong and other places, Singapore, huge. Huge. So if there's a big group, there's an even bigger group joining. You took it out as maybe something, yeah, to be really aware of.

26:24 **Samuel** So I would say to also justify that a bit, and it doesn't have to be a big text or something, but maybe 5 bullet points on how to take it as a chance, the collectivism, I cannot say. To take it as a chance and how to escape individualism in terms of community. Because we're gonna give that in terms of food, 100%. But let's try to give them communities. So how, if someone, if **Tiago** is saying subscription-based model, would the community like that, or do they need a family model? I don't know. Or do they need a model for 2? What does it really mean?

27:07 **Samuel** It may be a stupid example right now, but I hope you get what I mean. So the more you exchange your information, I know you don't have an office and you don't work eight hours a day in the same place, of course, but the more you share with each other, and this is what I mean when I say the group chat is or should be a group chat. **Matthieu**, at the latest on Wednesday, I want to see links from you. I want to be like, guys, I did a deep dive. I was in for three hours. This is my summary. I collected this data because I had to. This is my part.

27:54 **Samuel** I share it with you. Please work with this information. Maybe **Paul** is working on the same night on it, and maybe **Tiago** the next morning. But you guys are so strong together, I think you don't see it. You see it now, because **Paul** really did something here. And you all can use it. **Jonas** gave a thumbs up. I think, **Marius**, you did that one time, and even **Tiago** was also really inspired by this information. **Paul**, can I ask you how long did it take you to do that?

28:32 **Paul** Since I already dove really deep into this topic last semester, where I didn't compare Asia, I compared Russia to Central Europe, but I am familiar with this framework, so it wasn't that difficult.

28:48 **Samuel** Okay. How long did it take you to do that?

28:52 **Paul** I mean, this is a website where you can type in which country you want to see the scores of. That takes two minutes. But the reason, yeah, this I can send you the link to this.

29:05 **Samuel** This is not, this is just typing in the country and comparing. Okay. Sometimes two minutes can be enough, guys. Trust me, I did a course in two weeks, imagine. I had sometimes only two minutes on some things. And then it took me an hour maybe to find out a better solution after. But I had an overview. I knew what to expect. And this is where I would like to have you very soon. By very soon, I mean tomorrow. Like really tomorrow. It can be ten minutes, but ten minutes can be enough. It can be the end of the lunch break, it can be something in between classes. It's just ten minutes.

29:54 **Samuel** Just one question to ChatGPT. Give me references. Give me websites. Let's compare it. Give it to Claude. Pull it together. And ask yourself, does it make sense or not? This is the research phase which we are in, and I don't want to stress you in the end or to stress on indications before delivery time. This is where we can expect failures, and I really don't see us there. So let's take at least the days that we have now remaining and collect data with each other, share the data in the group chat, and save it down in the drive and send the drive link. Everyone has access to the drive. Just share it.

30:44 **Samuel** Hey, I put that document in that folder, here is the folder. If someone is not looking at it, okay, their fault. But make it accessible for everyone. Next time, with a comment. Save time of the other person. Hey, I looked at this. This is what came out. Here's the link. It takes you 2 minutes. It takes you 10 minutes. Expectation management. 10 seconds more. Everywhere. 10 seconds more. And we will increase hours of work.

31:19 **Tiago** Can I make a suggestion about the way to work with files in the group? Yeah. Are you familiar with Gemini Notebook? Formerly NotebookLM. At first, it's a tool created by Google which was tailored for students. But the good thing with it is that you can upload, if you have the premium version of Gemini, which I have, so I can create it.

31:51 **Tiago** You can create it. It's like an AI which can have a huge context window, and you can upload up to, I think, like 5 million words to it as sources: PDF, Markdown, Word files, audio, everything. And you can connect it to the drive as well, and when you ask a question to this AI, just like judge bt it's like a normal chatbot. It's gonna make links between the parts done by everyone, and I've used this in a group project. I don't know to what extent you could be interested in it, but it's great because sometimes I might be working, I don't know, on how to reach the target

32:44 **Tiago** The customer, the target customer, and then **Paul** has this really good point on how they behave, and it's gonna connect the two. And then you can build on what other people did, sometimes even without knowing or remembering that he had done that while he was doing the research, you know. I think it can be interesting, but it's up to you.

33:15 **Samuel** No, I got it. Thank you very much for bringing that up. I need to do an upgrade for all the employees that I have in the company. It's a collective subscription, as I've seen right now. I don't think we will make that now. And also, we don't, we're just learning on communication. So let's at least try to work remotely together, and I think in the near future or in any other job, you guys are gonna compare at least, hey, should I use the AI or should I work with my employees in between that? So yeah, thank you for bringing it up. I'm always open for new AIs.

33:57 **Samuel** If you have any others next time, please bring it up, of course. This one costs too much in terms of the short

34:06 **Tiago** No. I have the subscription. I can share it with you.

34:14 **Samuel** I don't think you can. Okay. It's really on every Google account, as I can see here. You know, I have a Google Business Workspace. So, okay. No, it's not a private one. Okay. Great. Great. So then I do my part of expectation management, and I hope I help you with that for this week and also next week. So if we open the plan, shall we?

35:04 **Samuel** We're talking about the business draft review model with evidence gaps. An evidence gap can be an assumption where we may not have the evidence, as, for example, the one from **Paul**. Is it a threat or is it an advantage that this country really aligns on collective? So yeah, but at least we have to put it together, and we have to put all the information together, not only from one, from six. And this is what I was thinking about: hey, is it enough time? So please be keen on that. Today's the 5th. 6th, 7th, 8th.

36:03 **Samuel** So on the 8th, I would expect something by 6 p.m., if that's possible, and I want that everyone uploads their stuff in the drive first. Then we have a look through that. And

someone puts that together on the 9th. Who has the most amount of time on the 9th? I think it should be at least 2 people. I can check.

36:44 **Tiago** On the 9th. I got

36:46 **Samuel** some time on the 9th. You don't have to put it together on the 9th, actually, I think. I would have them on the 8th. You know what? Everyone would upload it by the 9th. It's okay. It's okay. We're gonna have a look at it on the 9th, **Joshua** and I. But please do it by lunchtime. 9th lunchtime, everyone in his folders in terms of finance. Yeah, please make some clear structures in your team, fuller teams.

37:27 **Samuel** In team A, **Tiago**, please, and in team B, **Paul**, find a structure for the folder that makes sense for everyone so that you guys can divide by evidence and maybe references, or you have some PDFs, or maybe you will find the business case of Starbucks, or maybe you will find a book that is open source. So whatever it is, whatever PDF it is, please put it in the folders.

38:08 **Tiago** Just on the idea of contacting the Indonesian units, because they have extensive research on customer behaviour in Indonesia, as well as contacting restaurants as a group project and not like for another company, it could, we could get some relevant insights because theory is something, then they are actively selling to Indonesian and to European, and the idea of contacting other restaurants, like bigger, more famous restaurants, would be to have an idea on how Indonesians relate to Western food and on their choice, because I looked at a lot of menus, but at the end we don't know what they order.

39:03 **Tiago** So the idea would be to ask them, on certain dishes that they sell, how differently do people behave when they buy that kind of food or something that is more Indonesian-like or totally Western. That would be my idea. And I have some addresses that I would think would be relevant to contact.

39:32 **Samuel** So one really important thing. I don't want anyone right now to contact other restaurants in Indonesia because tomorrow it's related to our investors. I take care of that to take those interviews. The only thing that I would like, or maybe makes more sense, is maybe HSG has any collaboration with an Indonesian university. Then maybe with more than one. So let's take the one out that has the most amount of students. And maybe to get on a quick call, or I don't know, you guys know the process on how to connect or how to talk to them by email or call or whatever. And to quickly call me beforehand, "Hey, Sam, it's this university."

40:20 **Samuel** We're talking about 1,000 students. Maybe out of that 1,000 we have 50 to 100 students that would fill out our poll. How long does the poll take? Hey, let's not do it longer, let's not make it longer than two minutes to do or five minutes to do. And then we have a great, I don't know, insight of the behavior of how they eat. And maybe we can do one with a kid's school and maybe one with some of the teachers as well or something, so we get a great insight from all types of groups. So

41:02 **Tiago** HSG has one partner university in Indonesia, which is the University of Gadjah Mada. It has 55,000 students. And 55,000 students. And it's a close partner of the University of Sangam, they are collaborating on bachelor and master level, which is pretty good.

41:33 **Samuel** 55,000 people.

41:35 **Tiago** 55,000, yeah. But only one

41:39 **Samuel** in Indonesia. Do you think it makes sense to ask Haiko how to pull that up? Because I don't think it's the last thing we need from them, maybe. And maybe we could make an introduction that is more open, a little bit more like, "Hey, guys, actually it's a bit short notice, but we just have this group and the capstone project and the Boucher Card," like, give them a proper introduction to the project with the professor or the main responsible person there to prepare something for the next two weeks. You know, "Hey, we have a poll and maybe we have some interviews with," or maybe you guys have similar projects.

42:23 **Samuel** Maybe they have another project in-house in terms of robotics. Maybe they have something in terms of buying and selling food, maybe they have something in terms of delivery. So I would make it a bit more, think like a CEO. A CEO, he wants to connect with the company, and the school itself is also somehow a company for us. So let's try to connect with the CEO first, then let's talk about the certain things, because I was not expecting such a big school. **Jonas**, sorry. Thank you for waiting.

42:58 **Jonas** I think I mentioned before, but I have a friend of mine who owes me some favors, that studies in these universities. He studies electronics and maybe some robotics. And he also works as a head of marketing for an SME based in Jakarta. So even though he's not studying marketing, he might have some insights, or at least, like, of how the customer behaves there. If I'm allowed, I can gladly just reach out to him and maybe give an intro to you if that's needed, and if he, to see if he can bring us anything relevant.

43:31 **Jonas** They might have, you know, I don't know, like robotic clubs in the university, marketing club book, or just a chair of marketing where they have certain data about how the customer behaves, and some of this data are maybe really relevant and are not accessible for us from Switzerland. So, I mean, it doesn't hurt, but don't want to just take the initial chance if you

43:55 **Samuel** don't want to. No, that's really cool. There's just 2 things to be aware of. First of all, we cannot share any documents with those people. Please make sure about that. In terms of asking the school, **Tiago**, I give you the permission to send the adjusted business scope, project scope that you've collected in the end, that you've fulfilled in the end, the one with the red title page. Of course, in terms of the university, we have to give them an understanding on what we do.

44:31 **Samuel** In terms of friends and everything, great and cool, but in an official way, maybe our weekly calls, put them onto the weekly call: “Hey, do you have time next Monday?” Maybe say 6:30, so everyone has the chance to maybe say hello. So we do a small introduction, a really small one, and then we can drop the questions, or even better, maybe even better for the first call beforehand, our group collected those questions. Could you answer those questions, or do you have time, or do we have to think about how to reach that person before we just say, “Hey, we are the cool ones from the course”?

45:17 **Samuel** I think it should be, we should be able to collect information for everybody in the group. That's really important, and not only for one. But of course, yeah, maybe for this week, and you can catch him for something small. Try to reach him for something and ask him after, “Hey, do you actually have more time?” We are a group of 6. Yep.

45:44 **Tiago** 6:30 would be 11:30 there. At 23:30. Mm-hmm. In the morning, in the afternoon, at night. Oh, almost midnight. I mean, it's no point. So it makes no sense at all.

45:59 **Samuel** Yeah, that's what I mean. No, maybe you reach that person by yourself and try to work with him maybe until the 9th or the 12th or whatever, and then we collect data, and then I know what questions certain people have. Yeah. Yeah. But you can send me his LinkedIn; I would be interested. Yeah. Wait on the pitch right now. Okay, I think then, yeah, we are aligned. Thank you very much. Last thing is on our project scope, which I told you to focus on in terms of working on the project. Please keep an eye on the questions. That's all I wanted to say.

46:48 **Samuel** Also, this topic I see a little bit separately because of what **Paul** and **Tiago** and **Jonas** just mentioned and found out. You see, it's a really big thing, maybe because Indonesia has culture, which I mean is a beautiful thing. It's easier to frame people in Europe, as you can see in the Western Hemisphere. So, yeah, maybe it's a bit harder to get to the cultural fit there. What herbs? Again, what herbs do we have to implement in the food? Still a question that I didn't answer today. Do we have sautéed chicken on the menu? I'm joking, I don't know. So, yeah, those are actually things that are really important as well.

47:40 **Samuel** And then for the financial team, of course, number

47:44 **Tiago** Seven, a pillar two. Just for me working, do you allow me to connect the drive to my notebook, Adam? Gemini notebook. Because I like to connect the

48:06 **Samuel** You cannot really... You want to connect within the company documents? Like with Google Business, with the M. No.

48:14 **Tiago** Oh, no, I cannot. Sorry. I don't think I can connect it to my Google Gemini notebook because it's not my cloud out, so

48:23 **Samuel** But to be honest, you can just, I think, set in the Einstellungen, in the settings, that you want to get a notification whenever someone is uploading a file. And it's not that many files. So just download the files and you put it in your L. It's good. In terms of your Pocket thing, similar Pocket call thingy summary that recognizes people's voices and everything. Let me know what you need and let's implement it for next time, for next meeting, for whatever. It's here. Okay. So you just, or you just send it to us. I think it's much better than the one from Pocket. And maybe go to California and sell it to Apple.

49:16 **Samuel** I don't know. Pocket is from Apple. I think they bought it. It looks really similar to Apple devices. And it really has problems with Swiss German and everything. Yeah. All right. Anything else? **Joshua**, financial team? You're happy? You want to mention anything else? You don't have to? No, for me it's good. For my part. Let's just start. Maybe last thing so that you guys understand what we're doing on the other side. **Joshua** and I, we had a great meeting on Saturday, and we are really, how do you say, aligned that we have to find a new location in Zurich.

50:02 **Samuel** I was thinking about Indonesia all the time and focusing only on Indonesia, but we also have good reasons in terms of cash flow to create another location in Zurich if possible. Should be a pop-up location. So if you know anyone, if you hear something, of course let us know. We don't sell it as a pop-up at all, so at least one year, but pop-up locations usually tend to be much cheaper. So in terms of taking the money for a robot, it

would be more interesting for us than taking the money for rent and giving it to a landlord that we don't even like.

50:50 **Samuel** So if we have a cheaper location spot available, it can be really small this time. I think **Marius** was asking last time. So **Marius**, also for you. This time it can be less than six square meters. A robot or one robot would fit into a six-square-meter location, but of course, 30 to 40 to 50 to 100 would be great. Then also for Chocta, we call it a hybrid location. I think that's an official thing that we can mention. Hybrid means it will be the first location to implement robotics as best as possible. But of course, we need human beings.

51:37 **Samuel** So maybe keep that just a little bit in your brain, just so that you know it will not be a fully autonomous location, and it would never be just a location run by humans. Yeah, that's one thing, and we are working really close with people and the University of ETH, and I hope we will soon have a connection with them officially to also represent you with the ETH people.

52:13 **Paul** I just had an idea since you're talking a lot about implementing a robot in a restaurant. There is, very near where I live, a charging station for electric vehicles that has a vending machine for pizza. Yeah. Did you think about maybe implementing this concept of a vending machine for pasta?

52:44 **Samuel** Yeah, but with a much higher approach of quality, and in order to do that, it cannot be that small. It cannot, it's just not possible in terms of fresh food, fresh supply. That's why I said I think five to seven square meters is the minimum. And those vending machines are like one square meter, right, and like two meters high. And, or maybe one of, and if, yeah, probably for pizza it's smaller since they're only

53:17 **Tiago** Put in the frozen pizzas like discs. I would be big, I think. Other, I just

53:27 **Jonas** Yeah, you have an ask. Yeah, you just mentioned FR. I know maybe you're already in contact with them, but at start with some contacts regularly with, like, the robotics club of ATA. And so they are, like, really nerdy students into robotics, like really hardware. I can't see if that can be meaningful to just have them on the board or not. But let me know if you want, and then I can maybe connect you or just, yeah.

53:55 **Samuel** Just that, you know, we are finding, or we are on the... We try the best suitable way, and we talked to students, and the students managed to go through the professors. Yeah. Funny thing, we did the same way in ISK. So yeah, I think that's the official way. But if you need support on that, we will actually know. Okay, yeah.

54:19 **Tiago** For me, just regarding the vending machine idea, the robotic updates of any machine. I think there is a huge difference between just pressing a button and getting the pasta, and it's made by a robot, which I think is not something that I'm that much like, "Oh wow." I'm like, "Oh, really?" But if it's a robot and then you see the pasta being made by a robot in front of you, that's a totally different thing. That's wow. That's, okay, nice. But just having like, "Oh, I think, I don't know," it's absolutely...

55:03 **Samuel** I mean, we don't even know if we want to show the kitchen in our first hybrid location in Jakarta. I think the approach of live cooking should die in terms of the future of Corsa because, yeah, I mean, Red Bull doesn't show how they fill up the cans by a robot. For sure, it's a robot that fills the cans today. Red Bull shows the experience that you can

have with the product, and this is also our focus. So if we save money and if we are in the future with our own AI that is connected with the robotics, to call it Physical AI. Yeah, why not?

55:51 **Samuel** But the people, I don't know if you wanna show the people that a robot who just made their pasta. It's so... it wouldn't be a selling point. It's no. Okay. No. I don't want to rely on that because you get trendy for 6 months once everyone has seen it. Maybe you get... you will see other companies building on robotics. We will maybe we're the first, like, fully implemented franchise, blah. Maybe. We don't know. We don't know what's tomorrow. Maybe in 3 years the market is different. So let's just focus on, again, execution over strategy. The faster we execute, that's why those dates are so important.

56:42 **Samuel** The faster we can ask ourselves those questions. Oh, do we want to show the robot, though? Because we just have 50 million from investors, okay, then we can talk about it. But until then, and I wish you a lovely week. Really, I do. I wish you all the best for this week, and take the opportunities that you can have, and stay healthy.

57:12 **Tiago** Thank you very much. Thanks very much. Have a great...

57:15 **Samuel** day. Thanks. Bye-bye. Bye. Bye. Bye-bye.
