Recap

01 · RECAP

Overview

The meeting advanced Corsa's Jakarta market-entry research and financial case. **Samuel** reviewed the research, asking for stronger verification, trusted sources and investor-friendly summaries; **Matthieu** described work organized under CAGE and said he had answered point 6 of the scope. **Samuel** estimated that about 30% of **Matthieu**'s work remained, mainly verification and clearer presentation. **Paul** was absent, and his incomplete report was assigned for review; **Marius** couldn't speak. The group did not settle which market-entry framework to use, the halal requirements, or the financial assumptions, so the project's feasible overall workload remains open.

Jonas presented the Jakarta financial model and discussed CAPEX, rental and location scenarios, pricing and revenue; **Joshua** introduced the financial section and pressed for a location recommendation. The interim presentation was set for 21 October, and documents and presentation materials are due by 21 October. **Matthieu** is to pull market-entry information together by the night of 13 October, while **Tiago** is to review **Paul**'s report and report the framework choice by that night. The team aims to get through item 8 by 19 October. The financial model will focus on rupiah, with comparison at the end, and pricing will be middle and affordable. No next meeting date was specified.

02 · RECAP

Main topics

Jakarta Financial Model

24 min · **Jonas**, **Joshua** and **Samuel**

Joshua introduced the financial work, and **Jonas** described a model drawing on data in the drive and additional Jakarta research on competitors, restaurants, locations, costs, CAPEX and OPEX. The model links changes in its inputs to outputs, but **Jonas** said its assumptions still need to be confirmed or rejected. His starting CAPEX scenario assumes that most items are bought; he plans to compare buying with renting or leasing, including the approach used for the Zurich flagship. **Jonas** also noted that salary costs may change with annual indexing, offering complexity and workforce qualifications.

Jonas said renting requires less capital up front and can offer more flexibility if an experiment does not work, while **Joshua** argued that cash is especially valuable at the beginning and renting is the only solution then. **Jonas** had not finished researching rental solutions. He said rent strongly affects break-even and that his current revenue scenarios use minus 20% and plus 20%, which need refinement for location-specific factors. Senopati Main Road could offer visibility and activity, but availability and cost are uncertain; side streets may work with effective promotion. **Samuel** urged weighing location strengths and weaknesses against the brand concept, including whether a distinctive feature such as a Formula One simulator would matter more than extra seating.

The group did not settle an initial marketing investment or the revenue it might generate, which **Samuel** asked **Jonas** to show. **Joshua** directed the team to use rupiah in the model and compare at the end; **Jonas** raised including Swiss francs on the funding page, and **Tiago** said potential gains could be reinvested until the business is bigger. **Jonas** described menu-price comparisons, including café latte and Bolognese, and said the baseline might be too low; **Samuel** set the direction as middle and affordable. **Jonas** estimated Jakarta VAT at about 10 percent but was not certain. **Samuel** requested that the numbers be challenged; **Marius** was in class and did not speak.

OUTCOME The model will focus on rupiah and compare at the end, and pricing will be middle and affordable; assumptions, rental and location choices, marketing guidance, and the exact Jakarta VAT rate remain open. (29:51, 37:11, 50:44)

Culture Research Verification

13 min · **Samuel**, **Matthieu** and **Jonas**

Samuel praised the expanded culture research but asked for clear findings, trustworthy sources and confirmation rather than unsupported claims. **Matthieu** said he had incorporated information from the general reports and journalist information about new halal certification, organized the material under the cultural, economic, administrative and geographic parts of CAGE, and answered the questions in point 6 of the scope. **Samuel** said sentences about research not conducted should explain why and what was intended, or be replaced with clear explanations and confirmations, using government webpages or legal materials where useful.

Jonas explained that halal suppliers alone do not ensure halal restaurant operations: processing must also comply, and cooking with alcohol could invalidate compliance even when other ingredients are halal. **Samuel** distinguished halal ingredients, a halal food place and a Muslim-owned business, and said Corsa did not have to be a Muslim food spot. He suggested understanding the issue through a possible interview with a knowledgeable Muslim person and, if requirements prove significant, considering a small kitchen niche of pre-cooked meals using halal beef or another solution. Neither proposal was settled.

Samuel estimated that about 30% of the work remained, mainly verification and bringing the information together in a clear, accessible form. He said graphics and maps could help investors understand and trust the research, and that the material should be understandable to investors without food-industry knowledge. **Matthieu**'s work was therefore not considered finished: remaining confirmation and clearer presentation were still needed. **Samuel** also asked **Tiago** or another team member to review **Paul**'s incomplete report, which had some points still unknown.

OUTCOME **Matthieu** was to verify and consolidate the research with clear sources and visuals; the specific halal requirements and whether to interview an expert or develop a menu solution remain open. (05:10, 09:06, 13:21)

Market-Entry Framework

6 min · **Samuel** and **Tiago**

Samuel asked whether the team intended to use PESTEL, noting that CAGE already covered many findings that PESTEL would capture. He said PESTEL could still provide a useful summary or addition, while leaving the choice to the team. **Samuel** asked for a framework and document outlook by the 21st, allowing at least 10 days to prepare documents and a presentation. He asked **Matthieu** to consolidate market-entry information by tomorrow night and **Tiago** to consider options with his group and report the choice in the main group chat by tomorrow night.

Samuel described the eventual output as an ordered, recipe-like document of 10 to 15 pages that a non-specialist investor could understand in about 10 minutes. He said the order could be changed, so this was guidance rather than a settled sequence or framework choice. He emphasized confirmations and verified research to build investor trust rather than relying only on assumptions. The group was expected to answer the relevant questions in a clear structure, but no specific framework was selected.

OUTCOME The framework choice remained open; **Tiago** was to discuss the options with his group and report the selection in the main group chat by tomorrow night. (17:01, 18:47, 19:46)

Interim Presentation Date

4 min · Matthieu, Samuel and Jonas

Matthieu raised uncertainty about whether the interim presentation would be on the 21st or 22nd. He explained that he had civil protection on the 22nd and a mandatory course presentation on the morning of the 21st. Samuel said the 22nd was not possible for him and proposed the 21st. The 23rd was also considered, but Jonas and Matthieu could not attend then.

Tiago supported the 21st as the best option among those discussed. Jonas said the 21st slot was already in place and committed to confirm it with Heiko that day. The discussion settled on the 21st, with the confirmation of the booked slot still to be shared.

OUTCOME The interim presentation was settled for the 21st, and Jonas was to confirm the booked slot with Heiko. (21:16, 24:42, 25:09)

Also discussed

- Samuel set a goal of reaching item 8 by the 19th and called for further assumption validation and concise presentation summaries. (25:19, 26:23)

03 · RECAP

Key points

- The interim presentation was settled for 21 October; Jonas was to confirm the slot with Heiko that day. (24:42, 25:09)
- The financial model will focus on rupiah, with comparison made at the end, and Samuel set the pricing direction as middle and affordable. (48:13, 48:46, 50:44)
- Jonas's current revenue scenarios use a basic case with minus 20% and plus 20%, which he said need refinement to include more variables. (40:27)
- Senopati Main Road was identified as potentially ideal because it is busy and has many shops, but rental availability and cost were unknown, while rent can materially affect break-even. (39:54, 42:02)
- Jonas estimated Jakarta VAT at about 10 percent if he was right, but the exact rate remained uncertain. (50:50, 50:53)

04 · RECAP

Ideas discussed

Consider PESTEL

Samuel proposed PESTEL as a possible summary or addition to the CAGE work, while noting that CAGE already captured many of the same findings. The team had not chosen a framework. (15:04, 17:01, 17:56)

Investigate Halal Requirements

Samuel suggested interviewing a knowledgeable Muslim person to understand the halal issue and, if it proves significant, considering a small niche of pre-cooked meals using halal beef. Neither proposal was settled. (09:49, 10:54)

Add Visual Explanations

Samuel suggested graphics and maps to make **Matthieu**'s market-entry research clearer and more convincing to investors. This was presented as a way to support the research presentation. (14:18)

Compare Rental Solutions

Jonas proposed comparing buying with renting or leasing for CAPEX items, and researching providers that might rent premises or equipment. The comparison and rental research were still to be done. (31:32, 38:28)

Match Location to Concept

Samuel proposed weighing each location's strengths and weaknesses against the Corsa concept, and suggested asking **Ana** how Oakberry built its first 10 flagships. **Jonas** discussed possible car-community appeal and the trade-off between seating and a simulator. (43:28, 44:20, 45:49)

05 · RECAP

Decisions

01 The interim presentation will be on October 21, 2026. (23:52, 24:16, 24:27, 24:42)

02 The financial model will focus on rupiah, with a comparison made at the end. (48:13, 48:46)

03 The pricing direction is middle and affordable. (50:44, 50:48)

04 The team will provide a framework and document outlook by October 21, 2026. (17:56)

06 · RECAP

Next actions

Tiago

TASK	DUE
Review **Paul**'s incomplete report, or arrange for another team member to review it, and address the remaining unknown points. (01:03)	tomorrow
Consider framework options, discuss them with his group, and share the choice in the main group chat. (18:47)	tomorrow night

Matthieu

TASK	DUE
Verify the culture research, bring the information together, and make it clear and accessible with trusted sources and useful visual explanations. (06:11, 13:21, 14:18)	No date
Pull the market-entry information together and provide an outlook. (18:47)	tomorrow night

Jonas

TASK	DUE
Confirm the interim presentation slot with Heiko and share that it is secured. (25:09)	today
Share three observations or learnings from preparing the financial model. (36:07)	No date
Validate and refine the financial model assumptions, compare buying with renting or leasing, research available rental solutions, refine location scenarios, and make the outputs more readable for investors. (31:32, 33:19, 34:48, 38:28)	No date

No owner

TASK	DUE
Provide a framework and document outlook for the market-entry work. (17:56)	the 21st
Work through item 8 and validate assumptions using the team's resources. (25:19)	until the 19th
Estimate the initial marketing investment and the revenue expected from it. (46:42)	No date
Meet separately to review and challenge the financial numbers. (49:03)	No date
Challenge **Jonas**'s numbers. (49:03)	No date

07 · RECAP

Open questions

- Which framework will the team use to organize the market-entry work, PESTEL or another framework?
  Raised by **Samuel** (15:04, 17:01, 17:56)
- What halal requirements apply to the proposed food operations, and will the team need an interview or a menu solution such as a pre-cooked halal-beef niche?
  Raised by **Samuel** (09:49, 10:54)
- How will the team verify the research claims and provide sufficiently clear, trusted sources?
  Raised by **Samuel** (06:11, 11:44, 12:25)
- Which financial-model assumptions should be confirmed or rejected, including the CAPEX and rental approaches, and what is the exact Jakarta VAT rate?
  Raised by **Jonas** (31:32, 33:19, 38:28, 50:53)
- Which location offers the best profitability, considering rent, availability, visibility, expected customers, margins, and fit with the concept?
  Raised by **Joshua** (39:08, 41:35, 42:02)
- How much should be invested in initial marketing, and how much revenue would that investment generate?
  Raised by **Samuel** (46:42)

08 · RECAP

Per person

Samuel

Samuel represented Corsa and guided discussion of the market-entry research, investor-facing presentation, and Jakarta financial model.

POINTS MADE

- He said the general-entry work included reports from **Tiago** and **Paul**, and that **Paul**'s report still had some unknown points.
- He said customer behaviour affects willingness to pay and payment behaviour, and described the team's work on this topic as well done.
- He said culture research needed verified findings and trusted sources, noting that he had not yet confirmed the information.
- He distinguished halal meat, a halal food place, and Muslim business ownership, saying Corsa need not be a Muslim food spot.
- He suggested interviewing a knowledgeable Muslim person and considering a pre-cooked halal-beef niche if halal requirements proved significant.
- He said unclear statements about research should explain what was intended or be replaced with clear confirmations, using government webpages and legal materials.
- He estimated that about 30% of **Matthieu**'s work remained, mainly verification and synthesis, and suggested graphics and maps for investors.
- He proposed PESTEL as a possible summary or addition to CAGE, while noting that CAGE already covered many similar discoveries.
- He described an investor-facing output of 10 to 15 pages that a non-specialist could understand in about 10 minutes.
- He said investor trust should come from confirmations and verified research, not only assumptions.
- He settled the interim presentation for the 21st, said the 22nd was not possible for him, and noted the 23rd conflicts for **Jonas** and **Matthieu**.
- He set a goal to get through item 8 by the 19th and called for more assumption validation and concise presentation summaries.
- He suggested using about 3 to 5 bullet points per presentation page so listeners could understand the work within the page scope.
- He said investors may give the financial model to their accountant and asked **Jonas** to share three observations or learnings from preparing it.
- He asked whether renting offered advantages and whether external financial income or sponsorships had been considered.
- He suggested asking **Ana** how Oakberry built its first 10 flagships and evaluating locations against both their trade-offs and the brand concept.
- He asked what initial marketing investment might be needed, including out-of-home or general marketing, and what revenue it could generate.
- He gave the pricing direction as middle and affordable.

Jonas

Jonas, the data analyst in Team B, explained halal-operation considerations and presented the Jakarta financial model, its assumptions, and location research.

POINTS MADE

- He explained that halal compliance covers processing and restaurant operations as well as suppliers, and cooking with alcohol could invalidate compliance.
- He said the 21st presentation slot was already in place and that he would confirm it with Heiko that day.
- He said the financial model uses data in the drive plus research on Jakarta, competitors, and typical restaurant opening patterns.
- He said the model covers capital, venue, locations, potential cost of goods sold, OPEX, and CAPEX, with linked outputs changing together.
- His starting CAPEX scenario assumes most items are bought, and he planned to compare buying with renting or leasing as for the Zurich flagship.
- He said Indonesian salaries may be indexed each year, including minimum wage, and may vary with the offering's complexity and workforce qualifications.
- He said model assumptions still needed confirmation or rejection, and the financial work might need a more readable investor document.
- His location research covered tier-one and tier-two neighborhoods and relied mostly on rental announcements, with comparisons of cost, attractiveness, and target-customer fit still needed.
- He said renting needs less upfront capital than buying and may offer flexibility if an experiment does not work.
- He said he still needed to research rental solutions, including companies that might rent more or less everything.
- He said rent strongly affects break-even, since a hyped neighborhood requires more volume or higher margins to break even and make profits.
- His current revenue scenarios use a basic scenario with minus 20% and plus 20%, which he said needed more variables.
- He identified Senopati Main Road as potentially ideal for its activity and shops, but found few rental announcements and did not know availability or cost.
- He said a visible, more expensive street might bring customers directly, while a side street could work through advertising or influencers.
- He compared accessible restaurant menus for prices including café latte and Bolognese, and said the current base might be too low.
- He raised whether pricing should be middle and affordable or target higher-range customers, then acknowledged **Samuel**'s direction.
- He estimated Jakarta VAT at about 10 percent, within a possible 5 to 10 percent range depending on province and region, but was uncertain.

TASKS

- Confirm the interim presentation slot with Heiko and share that it is secured.
- Share three observations or learnings from preparing the financial model.

- Validate and refine the financial model assumptions, compare buying with renting or leasing, research available rental solutions, refine location scenarios, and make the outputs more readable for investors.

Matthieu

Matthieu organized Team A's culture and geography research under CAGE, added halal-certification information, and discussed presentation scheduling.

POINTS MADE

- He said he incorporated general reports and journalist information about new halal certification, then organized the research into CAGE's cultural, economic, administrative, and geographic parts.
- He said he had answered the questions in point 6 of the scope.
- He explained that certified ingredients alone do not certify the finished menu and preparation process, referring to the new certification information **Jonas** sent.
- He raised uncertainty about the interim presentation date and explained his civil protection and course commitments on the 22nd and 21st.

TASKS

- Verify the culture research, bring the information together, and make it clear and accessible with trusted sources and useful visual explanations.
- Pull the market-entry information together and provide an outlook.

Joshua

Joshua introduced the financial discussion and raised questions about rental, location profitability, model currency, and Jakarta tax.

POINTS MADE

- He introduced the financial section and invited **Jonas** to take the group through the financial work.
- He argued that cash matters at the beginning and renting is the only solution then, and asked **Jonas** to explain location profitability and recommend a location.
- He asked about model currency and directed the group to focus on local currency, with a comparison at the end.
- He asked how much tax is paid and what the exact Jakarta VAT rate is.

Tiago

Tiago contributed to scheduling and financial discussion, supported the 21st presentation date, and raised reinvesting potential gains.

POINTS MADE

- He said he would be unavailable the next day because a delivery was due at the end of the day, but had Wednesday free.
- He supported the 21st as the best presentation date among the options discussed.
- He said potential gains could be reinvested until the business is bigger.

TASKS

- Review **Paul**'s incomplete report, or arrange for another team member to review it, and address the remaining unknown points.
- Consider framework options, discuss them with his group, and share the choice in the main group chat.

Points to double-check

From an automatic check (gpt-6-luna). Some may be false alarms.

OVERVIEW Overview
The transcript does not support the claims that **Paul** was absent, **Marius** could not speak, or that documents and presentation materials are due by October 21; it also gives no deadline for **Tiago** to review **Paul**'s report by tomorrow night.

OVERVIEW Overview
The transcript does not say that the group discussed whether the project's feasible overall workload remains open.

MAIN TOPICS Jakarta Financial Model, paragraph 1
The transcript does not support the claim that the Zurich flagship's approach was specifically to rent or lease many elements; **Jonas** said he wanted to check whether buying or leasing would be worthwhile.

MAIN TOPICS Jakarta Financial Model, paragraph 2
Joshua said renting was the only solution at the beginning, not that cash was especially valuable while renting was only one option.

MAIN TOPICS Jakarta Financial Model, paragraph 3
The transcript does not support the claim that **Tiago** said potential gains could be reinvested; **Joshua** made that comment, and **Tiago**'s response is unclear.

MAIN TOPICS Culture Research Verification, paragraph 1
The transcript does not support that **Samuel** praised expanded culture research; he said it contained more information and focused on verification and sources.

MAIN TOPICS Culture Research Verification, paragraph 3
Samuel said to ask **Tiago** or get help, not specifically that **Tiago** or another team member should review **Paul**'s report.

KEY POINTS The financial model will focus on rupiah, with comparison made at the end, and **Samuel** set the pricing direction as middle and affordable.
The transcript supports using rupiah and comparing at the end, but **Samuel** stated the pricing direction, not a group decision.

DECISIONS The financial model will focus on rupiah, with a comparison made at the end.
Joshua gave the direction to focus on rupiah and compare at the end, but the transcript does not establish this as a settled team decision.

DECISIONS The team will provide a framework and document outlook by October 21, 2026.
Samuel requested an outlook within the week and documents and a presentation by the 21st, not a framework and document outlook specifically due on the 21st.

NEXT ACTIONS Review **Paul**'s incomplete report, or arrange for another team member to review it, and address the remaining unknown points.
Samuel asked **Tiago** or someone else to look at **Paul**'s report by tomorrow; he did not assign **Tiago** to address the unknown points.

NEXT ACTIONS Confirm the interim presentation slot with Heiko and share that it is secured.
Jonas committed to confirm with Heiko and share that the slot was secured, but the transcript does not say he must share it today.

NEXT ACTIONS Meet separately to review and challenge the financial numbers.
Samuel asked **Jonas** and **Ana** to meet separately, not the group generally.

NEXT ACTIONS Challenge **Jonas**'s numbers.
Samuel asked **Marius** to challenge **Jonas**'s numbers; the transcript does not assign that task to the group generally.

PER PERSON **Tiago**: He said potential gains could be reinvested until the business is bigger.
The transcript attributes the reinvestment comment to **Joshua**, not **Tiago**.

Transcript

00:00 **Samuel** Go through the market entry team structure, or maybe I would say to summarise that a bit, and then maybe the financial part, because some of you may not be involved in the financial part, but I think everyone is involved in the end in the market entry as well. Or to give a summary, like an overview of the market entry. I'm just gonna quickly open that. Oh, I lost my link, I'm sorry.

01:03 **Samuel** So, starting with general reports, we have the one from **Tiago** and the one from **Paul**. And as I mentioned last time, of course, it's not nice to hear that **Paul** is still in the hospital, but I think we have to find a solution here because what he has written down is good, but it's not complete. We do have some points not yet known. And I wanted to ask you, **Tiago**, maybe for tomorrow, if you can have a look at that, or someone else from the team. Okay. That would be great. So if we talk about general entry, we have 2 reports for the others in the team.

01:58 **Samuel** I think it makes sense to read that through as well, especially the one from **Tiago**. Customer behavior can also influence a bit how people, or how much people are willing to pay, or how they behave in terms of paying in the end. But I think this part from the group is really well done yet. If we go to culture. That's the latest one I had a look at. This is the one from **Matthieu**. It's also really good and detailed. Oh, I didn't see that. You updated it, **Matthieu**? Is that a yes?

02:45 **Matthieu** Yeah, if I can explain myself. So I had a file from last week, and then we had this meeting on Thursday or Wednesday, I don't remember, and so then I just went to the 2 general reports of **Paul** and **Tiago**. I just tried to look for some information that I could implement in my parts as well. And finally I just put journalist information as well about the new halal certification. Okay. And yep, so here it is, and then I tried to split it into the CAGE framework, so I have the cultural part, economic part, administrative part, and geographic part.

03:40 **Matthieu** And so I think that from what you saw, the blue things are the new things. So yeah, I think that's pretty much it.

03:52 **Samuel** Huh. Yeah, I mean what I see is that there is a lot more information now.

04:10 **Samuel** But I think my feedback last time was to insert, are you wait. This is the culture findings index. So

04:23 **Matthieu** Then you have Sergio explained the CAGE framework, so that's everything is split into the framework. But if you want, I put everything in the general report. Needs just one big

04:40 **Samuel** Didn't you do a geographic one?

04:43 **Matthieu** Yes, that's this one. This one is culture. But if you click on the geographic, if you go back in the drive. Yeah. This is the geographic document, so if you just open it

05:00 **Samuel** I only see this one geographic here.

05:04 **Matthieu** Yeah, but you can open it.

05:06 **Samuel** Yeah, this is the one. No, this is

05:08 **Tiago** Culture.

05:10 **Samuel** Yeah, that's what. No, here is geographic. Yeah, so if you double-click on it, it's a new one. Okay, sorry. Yeah, you see. My brain is not working for me. But okay. I had a look at the geographic part. Okay, this comes after. Okay, just for me, culture findings. Give me a second. Okay, so I think we really need findings slash confirmations because in terms of research, in proper research, we can confirm that, for example, 85 percent are Muslims. That's an example of what **Marius** just wrote. Because of this, we can add the sources that we looked up.

06:11 **Samuel** I see not a lot of sources, which is a good thing or a bad thing, can be both. I didn't verify the information. So either we can put sources on or we can somehow confirm it in a different way. That's why I mentioned to insert sources that you guys are keen on or have trust in. So this would be a great thing if I see this document maybe going down to 2 pages in the end. Okay. Without reading it, okay? Yeah. I will read it afterwards and I'm gonna put some comments in if I see something, okay? Yes. Okay, sorry guys.

07:20 **Matthieu** You did all of those. Yeah, well, I did the first one and then I just split the documents into four

07:29 **Samuel** parts. So those ones are, like, pretty small. That's okay. That's okay. But did you summarize the topics from the main document from the business scope?

07:48 **Matthieu** I answered the questions that were asked on the scope on point 6.

07:55 **Samuel** Okay, great.

07:56 **Matthieu** Yeah.

07:58 **Samuel** Okay. Good. Okay. There was one thing. I think it was here. This sentence. Buying certified ingredients alone does not establish certification of the finished menu and preparation process. Like, how come

08:40 **Matthieu** Why? Why not? I think that's because of the new certification that **Jonas** sent this afternoon. And

08:54 **Samuel** Yeah. That comes from that. Yes, **Jonas**, please.

09:06 **Jonas** You're muted. Oh, okay, sorry, I didn't hear that you wanted me to answer. But from what I can read, it's just that you can have suppliers that are certified, but then the processors you have in the restaurant also need to comply, basically. So even though, for example, if you cook with alcohol, like your pasta with red wine, then that wouldn't be, even though all the rest is basically halal, that would just break things. And then it's also about the operations, basically. Yeah, not only

09:43 **Matthieu** Yeah.

09:44 **Jonas** Basically.

09:49 **Samuel** But, okay, I think, mm-hmm, maybe we have to have an interview with a proper Muslim guy, but I think there's a big difference between having halal meat and being a halal food place.

10:06 **Jonas** Yeah, absolutely.

10:07 **Samuel** And also being not halal but a Muslim business owner. I know for a fact as a Muslim, as a proper Muslim, and I think **Joshua**, in terms of if we take salt. I think he mentioned that, right? He's not allowed to buy a house with interest. Yeah, as I remember.

So, okay. But this doesn't belong to us, so it doesn't matter if we are a Muslim business owner, and it doesn't matter if we are a Muslim food spot. We do not have to be a Muslim food spot. Of course, it helps if we don't use alcohol in the kitchen and use halal beef properly.

10:54 **Samuel** But if it's just that big of a thing, we can also just have a small niche in the kitchen of just pre-cooked meals in terms of halal beef, or find a solution for that. But I think you have to understand this topic really well then. And if **Marius** is the one who did the biggest research, maybe, **Marius**, it would be nice after your school, whatever, to inform the class, to inform our group on what you found out. Thank you. Okay. If I see a sentence like this, research has not conducted a line-by-line comparison of Swiss and Indonesian food law.

11:44 **Samuel** If we write that, then we at least explain why, or we just don't write it and explain it straight away. I think this is a typical ChatGPT sentence. I'm not sure, I'm just saying. And I would rather explain why or give a bit more information about what type of food law you want to import-export. Like, what was conducted here?

12:25 **Samuel** For example, here you have a subject and you explain no pork or no vegetarian should not be presented as proof of halal certification. Is still a better sentence than saying no pork and vegetarian research has been taken in place in terms of halal food certification. I don't get this sentence, but I get this sentence. Okay? So please don't give us open sentences. Either explain them or again proof. We need confirmations. And that you will find confirmations, you will find government web pages, you will find some stuff from the law. We don't need to be experts, but again here, 2 pages, great. So let's see if those 2 pages are at least clear for everyone.

13:21 **Samuel** I think **Matthieu**, if you go over your 3 things, you will have a really clear summary of all those. Like you, I think you did 80%, 60%, 70% of the work right now. The remaining 30 is about verifying and putting the information together that also, I would say, a normal human being or someone stupid would understand. That's what we have to do. Some investors will not be in the food business. But they will need to see this, like they will have to see to feel trust in what we did. So in terms of understanding, oh my God, that makes sense. Oh yeah. Absolutely. Oh, I didn't know that, really? Oh, sources here.

14:18 **Samuel** Okay, nice. They will gain trust. Okay. I'm not saying it has to be that beautiful like the one from **Tiago**. Of course it would help. But here, graphics. They help. That's what I mentioned last time about geography. If you put on some maps, if you explain why it isn't that, it helps. And again, in the end you can ask **Tiago** or get yourself some help on how to deliver it, maybe in a way that also someone that doesn't understand halal will understand it. You have a lot of information from a lot of different resources.

15:04 **Samuel** And I think now it's about time that once **Matthieu** went over his information on how to pull them together into one. And I think in the end it was a PESTEL that you guys wanted to do, right?

15:24 **Tiago** So, oh, this regarding my document is very fun. Not a, that's, it's a good

15:36 **Samuel** thing, **Tiago**, we have no chance to understand you. I'm really sorry.

16:14 **Samuel** Oh yeah, **Tiago**, **Marius**, maybe you have to connect the microphone with your phone. The last messages from **Marius** were just like an AI bot. Always right.

17:01 **Samuel** The PESTEL is like a foundation of the CAGE, but here the CAGE as we did it includes most of the discoveries we would have had in the PESTEL. Yeah, yes, for sure. But the framework PESTEL, I think I liked it a lot. So it doesn't have to be PESTEL, but in the end I see like PESTEL and explaining those fields. It would give a perfect summary of or like addition or almost whole summary of what we should do in the scope. But let's move forward to the scope, because this is what we have to focus on in my opinion. In terms of, I think, the 22nd.

17:56 **Samuel** So let me just check the business scope here. So here we have the full business package interim with a presentation, right? And we do have different topics. Of course, not everything is perfectly reliable to a PESTEL, but I know you guys can pull that together in a way that it makes sense. So either use the framework PESTEL as a main topic leader or choose another one. But give us an outlook maybe within this week, as we have the 12th already, so that you guys have at least 10 days. I would say until the 21st to prepare the documents, right? So, and the presentation.

18:47 **Samuel** So, **Matthieu**, in terms of outlook information on market entry, I think maximum until tomorrow night would be great to pull those information together, maybe provide it to **Tiago**. **Tiago**, until tomorrow night you can think about what type of topics or frameworks would you like to take in the group, discuss it with your group, and then we have to write about it in the main group chat. So that the financial team also understands which type of, I would say, framework we're using here.

19:46 **Samuel** Those are the questions that we have to solve anyway. And this is how I would go through, guys. Because it just has an order. You can choose the order you like. You don't have to follow that, but it helps. In the end, it has to be a framework again that a stupid person, not even stupid, like a person that is not from that field understands. It's like a recipe that investors go through and maybe they take 10 minutes of their time, and in the end it will be like 10 to 15 pages. And they need verification in the research. And they need to have trust.

20:36 **Samuel** And we build trust with confirmations and not only with assumptions. Any questions till now?

20:45 **Tiago** Do you hear me or is it worse? Huh? Do you hear me? Well, not.

20:52 **Samuel** Yes, okay.

20:54 **Tiago** It's just tomorrow I need to deliver for another day. So basically, we have something due at the end of the day. So I don't think I'm gonna have time tomorrow, but I would have time Wednesday. Wednesday, the whole day I have nothing.

21:10 **Samuel** Okay. **Matthieu**, Wednesday is good as well for you.

21:16 **Matthieu** Yes, it's all good. And if I can just, it's a bit out of the subject but not really. I'm on the... I just saw on the schedule for the interim presentation that it's gonna be on the Wednesday 21st for us because it's written like Corsa to be confirmed as project partner cannot attend on Thursday.

21:49 **Samuel** Yes. Yes. So the presentation is on the 21st. You guys ask for the 21st. I mean, you guys can also ask for the 23rd.

22:06 **Matthieu** Okay. I think you have...

22:10 **Samuel** Right, you asked Heiko.

22:12 **Matthieu** Already. I did not, maybe I missed the information, but I think I missed the information. Because I thought it was on the 22nd.

22:26 **Samuel** Someone asked. I think someone asked Heiko. Maybe **Paul**.

22:32 **Matthieu** Ah, okay.

22:33 **Jonas** Or did you tell him that you could not do it like on the 22nd and therefore he assumed that it would be on the 21st? Might be possible?

22:43 **Matthieu** No, I didn't because I didn't think it was possible to do some...

22:50 **Samuel** Let me check the group chat because I think I've wrote it in the group chat. Okay. This was in the very beginning.

23:21 **Samuel** I don't remember. I really don't know. Yeah, but we can't.

23:28 **Matthieu** But anyway, just for saying that at the beginning I was not supposed to be there on the 22nd because I have civil protection. But on the 21st in the morning I have a mandatory presentation for a course. So I had to take a day off from the civil protection, which means I could be there as well on the 21st.

23:52 **Samuel** So, okay, however, I know for a fact for a long time the 22nd is not possible for me. And that's why we would suggest the 21st. But we can ask Heiko? Maybe for the 23rd. Would that help you guys to have a bit more time?

24:16 **Jonas** Yes. I won't be here.

24:20 **Tiago** 23rd.

24:27 **Matthieu** And I won't be here either as I have the civic protection.

24:36 **Tiago** The best would be 21st, I think, for, I mean, 2 days and not the bigger interface. Yeah.

24:42 **Samuel** Okay. So let's do the 21st then. Okay. I think ask **Paul**, but I think if **Paul** didn't ask, we should write Heiko, right? Who wants to write Heiko? To make it a day earlier?

25:09 **Jonas** Yeah, I can, but actually he already put that in the slot, so we just need to confirm. I'll do that today, so we'll share that the slot is secured.

25:19 **Samuel** Okay. Great. So **Jonas** will take care of the confirmation. Okay, so to be really aligned with the topics, I'm just gonna open that one quickly. The goal is, until next week, in the next 7 days, so until the 19th, that we are through until number 8. This has to be the goal. So we need a little bit more validation onto our assumptions with the resources from everyone. I've seen it in all the documents. We need more summarization. Also, **Tiago**, you did really wide research. We have to pull that a bit together. It will help you guys in terms of the presentation.

26:23 **Samuel** Because in the presentation, and this is where it counts, you have to go through like duck. You have like 3 bullet points per page. And in those 3 bullet points, maybe 5 bullet points, Heiko and everyone else listening needs to understand what you guys did. And this is why your summarization is so important. It doesn't mean it's not correct, it doesn't mean parts are missing. It's on you to combine the information. It may feel wrong in the beginning, but in the end we cannot, I think there's a scope on how many pages you should write. Okay. **Joshua**, financial part.

27:23 **Joshua** Yes. So

27:27 **Samuel** And sorry for my voice, really.

27:29 **Joshua** Thank you, **Jonas**, for the work and for the sheet already. I don't know if the other guys want to listen because it's really just about all the slides.

27:52 **Samuel** I mean, why not? Feel

27:54 **Tiago** About the first parts? Sorry. Are we didn't want to talk about the market entry parts? It's because the audio is kinda bad. I'm really sorry about this. But I don't really understand, like, the some, it cuts, so I'm not following that much. I'm truly sorry about that. Not best condition. I just have to finish something at home. Really updates and then the time, actually. I'm sorry.

28:30 **Joshua** Yeah, just write us, we can still talk later. When do you

28:35 **Tiago** arrive? I guess it's true. Okay. Until I get there. It's just like if there's something important for me on the financial part, if I go, that's okay, we'll change the question.

29:08 **Joshua** All right. Yes. So did the other guys see what the financial guys have done already or not? **Jonas**? You want to take us through?

29:23 **Jonas** Yes, sure. You want me to share the screen, so you can actually see the files?

29:32 **Samuel** Yes. Yeah, perfect.

29:35 **Jonas** Yeah. Perfect. Well, let me just...

29:40 **Joshua** You have a nice spike, by the way.

29:42 **Jonas** Oh, thank you so much. Yeah, that's a real one. That's just not a background. It's...

29:49 **Joshua** Yeah. It's a co-close.

29:51 **Jonas** Style. Thank you. Yeah. Like, when I have interviews, I always receive questions about it. It's, yeah, really cool to print the ice. Let's... Yeah. Okay, so you should be able to see my screen now. Basically, what we did is that I used data that were already available in this drive and also collected some data about Jakarta, about competitors, about typical restaurants, like when they open, and then generated the attached report. I used it to have a broader overview because I'd never done that before, and I wanted to have a look at all the different aspects that we need to take into account.

30:42 **Jonas** So therefore, in the data, there is that little introduction, and then I basically gathered all the data, made some predictions. Some assumptions still need to be revised, and also many of them, I will also use the data from Group 1 to refine. For example, with Ramadan, we also add some really cool inputs from the cultural part. Well, what we've done so far is that we go through the different questions. We use that as a base to obtain this model and went step by step. So, the capital, the venue, the locations, the potential cost of goods sold, the OPEX, all the CAPEX.

31:32 **Jonas** Regarding the CAPEX, as a starting scenario, I assumed that most of the things were bought, but actually, as you did for the flagship in Zurich, you rented, you leased a lot of elements, and therefore I also want to double-check that to see where's the difference. Is it worth it to, I don't know, buy this or lease it instead? And then we also consider all the different costs, and everything is linked, so if we change the elements, for example, I don't know, the staffing. You can see that I added a few comments on every slide to see actually what the variables are. The yellow...

32:22 **Joshua** Stuff is your comment, okay.

32:23 **Jonas** Yeah, that's always, but like, yeah, I explained basically what it's for and also, okay, what's missing, what could change, what are the variables that can change. So, for example, you can see that, for example, yeah, of course, for wages, depending on the complexity that we do, if we just do simple coffee or more elaborate, then we might have a more qualified workforce, and therefore it would change the cost of salaries. So you have that.

32:51 **Jonas** Then, of course, it can be changed because many salaries in Indonesia also have an indexation every year, for example, for minimum wage. So, and then if we change the 11 there, you should see on the tuk on the P&L, that's like the code should also change on the, yeah, there basically. So that's basically the work we've done so far. So that was also to give a proper overview.

33:19 **Jonas** And now the mission for us is to just go further, to confirm or infirm all the assumptions, to check and also, like, maybe make a proper document that is really easily readable for investors because, like, no investor spends 10 minutes reading financial modeling. They just want to see the outputs and if they actually gonna make money.

33:45 **Samuel** Many investors will give it to their accountant and will say, “Go through.”

33:54 **Jonas** Yeah, that's the thing. Also, basically, just for the location, because I basically gathered many locations in the tier-one and tier-two neighborhoods, and then, like, if you look at the REN data, it's basically all announcements that I could find. You can see, like, just announce the location, and then, like, the idea is to just have an idea, okay, what does it cost? How is the demand for, like, commercial surfaces? And also want to improve there because I mostly have Roku, but I want to have, like, other more modes to react, clearly see, like, and have different modeling because, of course, then it's gonna affect everything else. Yeah, then that I found, like, quite interesting.

34:48 **Jonas** It's also to compare the different locations. I also content the work from group one. I'm gonna have a look because the idea then is to also see the attractiveness and if, like, the location might be really cool in itself, but does it fit our target customers and, or does it fit, like, really what we want to do? And then, like, just compare it and also, like, with the price because, of course, there are, like, really huge surfaces that are risk appetite. Where do you see the risk appetite?

35:32 **Samuel** No, **Marius** wrote that. It was a question to him. I didn't want to

35:37 **Jonas** interrupt you. Okay, yeah. So as I mentioned, that's also, like, further information. I don't know, like, I see you did, like, a few feedbacks for that. Gonna, like, take them into account and then, like, also refine that. But yeah, this file gives us already, like, a cool overview of, like, what we want to take into account and where, what do we need to work on. Really helps to get some structural work instead of just diving into information without having any help at the end.

36:07 **Samuel** **Jonas**, what are, like... Sorry? What are, like, three for the group? What are, like, three? How do you say, observations that you made while preparing financials? What are, like, three maybe learnings, or what is, if you have to sum it up in two to three sentences?

36:31 **Jonas** Two to three sentences. Well, basically, the ecosystem in the different roots, like, completely different. So not, like, about the cost, also about the demand. Like, in some areas, that was really hard to find some announcements on the web to see if there were

available spaces for the typical restaurants. So high demand, higher price, taking to take into account. Then, yeah, main difference, like, the CAPEX depending on the capital we have available. Renting is really advantageous, even though I've not, like, finished completely the things. And what is

37:08 **Samuel** Renting advantages?

37:11 **Jonas** I mean, just that regarding the capital, you have, like, less capital to invest, like, directly. If you buy, you actually own, but then, like, it can cost, I mean, if you have a fully equipped kitchen, it can cost a lot, and also depending on the degree of robotization, because as you mentioned, it's gonna be hybrid. We may not need certain furniture that long because we also have, like, improvements in that regard, and therefore it also allows, like, way more flexibility. I don't know if we just invest, like, in infrastructure for beverages, it doesn't work because customers don't like that.

37:51 **Jonas** If we bought it, we just have that takes place, that costs money. And we cannot, we can resell it, but for a lot. If you lease it and you experiment with, like, a flop and it doesn't work, you can, like, more have more flexibility too. So, like, maybe, yeah, change what you're doing. So that's the main difference I see for now, like, between renting and buying, so in terms of competitive advantage.

38:19 **Samuel** So did we already put interest in and post potential sponsorings as well, or external financial

38:28 **Jonas** incomes? Not yet, actually. I think for buying versus renting, I want to do proper research myself to see what solutions are available to rent. I think there are companies that actually rent more or less everything. And yeah, good input, **Marius**, something to look at. And if in your network or among the potential contacts you have some professionals, for example, anything you might be in talks about or going to be in talks about, that can also be really interesting.

39:08 **Joshua** Yeah, so for the discussion of buying and renting, I think cash is king, you know. In the beginning, it's really helpful to have some cash on the side, so renting is the only solution. Yeah. So don't focus too much on this decision. Okay. What would be really interesting for making a financial decision is the I saw you made based on the location. Yeah, and this will be the key point: where can we be most profitable, yeah? And explain to us a little bit more about this finding.

39:54 **Jonas** Well, what I find is that basically, I think it's a bit biased because in some of the assumptions there, you don't have that many locations. But the price of the rent impacts a lot in terms of break-even. So if you are in a really hyped neighborhood, we have to sell a lot more volume or have higher margins to actually break even and make profits. So that's where we take the different districts into account.

40:27 **Jonas** And then if we have a logically higher rent because we are in a really hyped mall or a really busy street, we expect to have more customers or to sell them for a higher price, and that's where this comes from. And basically, for the revenue, I also have 3 scenarios. Basically, I take a basic scenario and set it at minus 20% and plus 20%, but it needs to be refined because we might have more variables to take into account in the different scenarios, basically. Yeah.

41:03 **Jonas** So basically, based on the cost of the rent, but then it might be refined if we take, for example, I don't know, if we say, yeah, we go to Senopati Main Road, therefore we have a higher rent, but it's more hyped to have more high-income people that are both in the streets, and therefore we can also expect higher margins to increase the revenue per customer, for example.

41:35 **Joshua** Yes, so from this, what is your suggestion? Where should we go, and why not? And yes, because the locations I see there are like 6 options here, 6 districts, and, you know, it should also be a flagship store, so this will also have some power to influence the revenue. Yeah.

42:02 **Jonas** Well, I mean, if we can, like, tier-one street location might be more advantageous. Senopati Main Road. I also had a look on Google Maps to see it's like a really busy street, like a lot of shops already, but so it seems that really many people go there to consume, to drink, to eat. And the thing is that I saw very little announced, like, on possible rent or surfaces for a lease. So that would be, I think, really ideal. But the thing is, the availability and at what cost?

42:35 **Jonas** Because since Kashking, I mean, we have never been in Indonesia, maybe having a two-way rent would just, like, wouldn't be that advantageous. And then, like, you have the side streets that are also, like, really close in the foreign location, but less likely to be seen from the outside. So it also depends on, like, for example, advertisement campaigns. Do we come to the people, or do people just come to us by seeing us on the street or in the mall? Or do we have, like, for example, I don't know, influencers? Because if people know the loc- know that we exist, they would come even though it's, like, one street away apart.

43:14 **Jonas** If we counter the fact to be really visible on the street, then, like, worth it to have, like, a more expensive rent to have a really attractive and seeable location. Yes, Sam.

43:28 **Samuel** Two things are really important that I've seen. First thing, you need more, I would say, clarification, and I think **Ana** could provide that with her research on Oakberry. So maybe you can ask her how they built the first 10 flagships. Yeah. What did they focus on? There's no right and wrong. In the end, nobody knows. But I think there is a good way of finding the sweet spot, finding the middle. We don't need to be on the main road, but maybe it helps, as you mentioned. But then it's all about how many positives do we have and how many negatives? Yeah. And what are the numbers?

44:20 **Samuel** And the second thing is we should never forget that it's a new brand entering a country. Yeah. And if a new brand enters a country, I'll make an example. If we have a location where we can replicate a pit stop from Formula One in terms of the size, in terms of how it looks. Yeah. It may help more than having a really big, I don't know, like surface in a shopping mall, but it doesn't look like our concept. Yeah. So the more we can align with our concept, the more it may help also to write good numbers because people understand our concept.

45:08 **Samuel** So it's a really hard job in financial marketing as well, but it's where we can really work, finding the right location for the concept itself. And maybe you will find a shopping mall next to the racetrack. I don't know. I'm just, it's just an example. Maybe you find something next to the car area of this town. So whatever helps. Yeah, so giving you again also not an assumption, more clarity so that you can highlight SCBD and Senopati side street because of this and that.

45:49 **Jonas** I mean, if you look at, yeah, there was already a difference, like in terms of brand, but yeah, of course, car community, you mentioned it. Like, I'm thinking about Japan, you know, where they have these huge, like, Toyota and Honda communities that go around cars. That might exist in Indonesia, yeah, sure. And also then, for example, depending on the type of surface we have, we might have more sitting places, but the cash you make per square meter by having 5, 6 more sitting spots instead of having, I don't know, like, a Formula One simulator, you can also create a difference in terms of traction. Yeah.

46:39 **Jonas** And yeah, so thanks for the input.

46:42 **Samuel** Okay. Yeah, just from my side, marketing costs: what should we invest in the beginning in marketing there, over there, in out-of-home, maybe general marketing or whatever? Maybe you can share this page quickly. And the rest is all **Joshua**. I think guidance now is really important to go in the right direction of how much we need and with how much do we walk out if we invest this amount of money, right? Yeah, of revenue. Yeah, of revenue, but how much pre-revenue?

47:34 **Jonas** The revenue we expect for the first month. Let me just check monthly.

47:43 **Joshua** This was also my comment. Because sometimes it's hard to see which is, it's groupie or it's

47:51 **Jonas** Yeah, I saw your comment, and basically, so your investors are based in Indonesia or in Switzerland? Both. Both. Okay. So should we have both files? So one in Rupiah and one in Swiss francs, or just one that is easily convertible, because

48:13 **Joshua** Yeah, just in Rupiah, and then at the end we make the comparison. So

48:18 **Jonas** Yeah, I think we make the

48:20 **Joshua** I did that.

48:20 **Jonas** On a few. Yeah, maybe on the funding one I should have the one in Swiss francs too.

48:31 **Samuel** Yes.

48:32 **Joshua** Yes, so it

48:34 **Jonas** Because, yeah, of course, if you see 400 million Rupiah, I'm like, that sounds a lot, or it is clear, and I completely understand. Yeah, that might sound quite

48:46 **Joshua** Yeah. Yeah, focus in local currency.

48:50 **Tiago** Yeah. Because

48:51 **Joshua** Also, the potential gain. Yeah, we want to reinvest it until we have a really bigger

49:00 **Samuel** Liquidity.

49:01 **Tiago** And then

49:03 **Samuel** Then, okay. So **Jonas** and **Ana**, I think it's good if you have a separate meeting. Yep. **Marius** is now in class. I think it would be great if you challenge the numbers. **Marius** is risky. What? Like the teacher. Yeah, sorry. **Marius**, please challenge the numbers of **Jonas**. Thank you.

49:37 **Jonas** Yeah, we challenge. And, yeah, just one last thing about the pricing. I mean, I went further, you know, **Tiago** did a database with all the restaurants, like Italian restaurants, Italian, like. So I went further on the database and looked at every menu I could access to

see the average prices we have, and so we have an overview of what's the usual price that the potential competitors or restaurants that are already established and sell the same kind of food or drinks as us apply.

50:12 **Jonas** The base is a bit maybe too low, but also it gives an idea how much do they sell a café latte, how much do they sell a Bologna there? And then we can also, with other variables, like since some are hotels, some are also pop-ups, see where we stand actually in terms of pricing. And also, should we sit in the middle and be affordable, or should we target more high-range customers?

50:44 **Samuel** Middle, affordable. The more the better. Okay.

50:48 **Jonas** Yeah.

50:50 **Joshua** How much tax do you pay on the

50:53 **Jonas** VAT is between 5 and 10 percent, and in Jakarta it depends on the province and the region in Indonesia. And if I'm right, in Jakarta it's 10 percent of VAT, more or less. Yeah, I think I have it somewhere.
