Recap

01 · RECAP

Overview

The 5 October meeting reviewed Corsa's Jakarta research and financial case ahead of the 9 October work review and the 22 October interim presentation. **Tiago** presented preliminary customer findings and proposed ways to learn more about Indonesian customers; **Samuel** set expectations for presenting evidence, competitor comparisons and impact. **Jonas** discussed customer acquisition costs and the status of cost and margin research, while **Matthieu** outlined cultural questions relevant to Indonesia. **Samuel** also described Corsa's possible Zurich location and hybrid operating format. The group was asked to upload work by lunchtime on 9 October, when **Samuel** and **Joshua** will review it; **Jonas** expects proper cost and margin figures in a couple of days, and **Matthieu** was asked to share links by Wednesday at the latest (7 October). **Tiago** also has a presentation due tomorrow, 6 October.

The group established document-sharing and external-contact boundaries: **Tiago** and **Paul** will find folder structures for their teams, no one should contact Indonesian restaurants, and **Tiago** may send the adjusted project scope to the University of Gadjah Mada. **Samuel** said work will continue after 9 October so there is time for review and adjustment. The meeting assigned work but completed no listed task. It clarified immediate phase-one expectations for prepared research, collected material and evidence gaps, but did not settle the overall feasible scope, resource trade-offs or how findings should feed financial forecasts. Questions about Indonesian cultural fit, community models and the Zurich site and customer experience also remain open. No next meeting date, time or place was recorded.

02 · RECAP

Main topics

Indonesia Market Research

16 min · **Samuel**, **Matthieu** and **Tiago**

Matthieu explained that Hofstede's framework compares cultural dimensions and identified power distance and individualism versus collectivism as relevant to Indonesia. He said Indonesia ranked among the world's most collectivist countries in the evaluation he had seen, while noting that the specific evaluation matters. He described group belonging, social norms and family priority as factors that could affect whether wheat-based Italian-style pasta fits accepted dietary norms, but said he still needed concrete Indonesia data. **Samuel** asked him to work through the culture and geography material during the week.

Samuel treated community orientation as a possible opportunity and asked the group to consider food-based community models, including subscriptions, family plans or plans for two. He also suggested a short student poll, estimating that 50 to 100 responses might come from 1,000 students, with the poll lasting 2 or 5 minutes; he raised possible outreach to a school and teachers as well. **Tiago** had earlier proposed contacting universities in Jakarta and successful local companies, and later suggested asking restaurants about choices between Indonesian-style and Western food.

Samuel ruled out contacting Indonesian restaurants at this point because the interviews related to investors and he would handle them. He suggested checking for an HSG collaboration with an Indonesian university and consulting him before making contact. **Tiago** identified the University of Gadjah Mada, with 55,000 students, and said it collaborates with the University of Sangam at bachelor's and master's levels. **Samuel** proposed a broader introduction to Corsa and authorized **Tiago** to share the adjusted project scope, but prohibited sharing documents with **Jonas**'s friends; **Jonas** could approach his friend individually.

OUTCOME **Tiago** was authorized to share the adjusted project scope with the University of Gadjah Mada, while restaurant interviews remain **Samuel**'s responsibility and the cultural-fit questions remain open. (23:31, 39:32, 43:55)

Research Deadlines and Coordination

13 min · **Samuel** and **Tiago**

Samuel asked the group to communicate in advance after **Ana**'s update arrived only 20 minutes before the meeting. He said the group should show prepared documents and research, identify what had been collected and flag where support was needed by 9 October. **Jonas** said his restaurant cost-of-goods-sold and margin research was still broad, but he expected proper figures in a couple of days. **Samuel** noted that operating data on menu, staffing, margins and equipment had not yet been shown.

Samuel stressed that 9 October was not the end of the project: the group needed to leave time for review and adjustment and continue working afterward. **Tiago** said he understood, while noting that he had a presentation due the next day. **Samuel** also asked **Matthieu** to share links by Wednesday at the latest and asked everyone to put findings in the group chat, save them to the drive and provide the drive link so others could access the work.

Samuel clarified that uploads were due by lunchtime on the 9th and that he and **Joshua** would review them that day. He first mentioned an upload time of 6 p.m. on the 8th, then revised it to lunchtime on the 9th. He assigned **Tiago** to find a folder structure for Team A and **Paul** to find one for Team B, with folders for evidence, references and source files. The clarified milestone covers first findings, the draft model, roadmap and evidence gaps.

OUTCOME The upload deadline was set for lunchtime on 9 October, with **Samuel** and **Joshua** reviewing the work that day; **Tiago** and **Paul** were assigned the team folder structures. `(01:10, 18:08, 36:46)`

Customer Findings and Forecasts

12 min · **Tiago**, **Samuel** and **Jonas**

Tiago shared preliminary customer-profile research drawing on Oakberry and Starbucks. He reported that 56% valued healthfulness, customers liked Oakberry's smaller portions and 80% liked customisation; he proposed different sizes and cited 78% of Gen Z and 67% of Millennials as liking meal-based subscriptions. He also suggested that customers may value a place to hang out and a sense of belonging. **Samuel** asked him to structure the findings, put the most important points first and use both text and graphics. The proposals remained for further research rather than being adopted.

Samuel said Oakberry should remain a close comparison, while Starbucks examples should be included when they have substantial effects on cash flow or community. He described Starbucks locations that were too large for students staying for hours and its voucher system, which he said generated cash flow. This gave the group a high-impact focus for comparisons, but did not settle a complete competitor scope. **Tiago**'s suggestions about portion sizes, subscriptions and a welcoming venue were recorded as research ideas, not confirmed product or business decisions.

Jonas asked whether the customer findings were relevant to forecasts, noting high customer acquisition costs in the first weeks and months of opening in Indonesia. **Samuel** proposed assessing impact by money affected and number of people affected; **Jonas** added lasting reach, whether people retain the name and whether they could become customers. **Samuel** cautioned that community benefits and viral attention may be difficult to measure or link to specific spending, but said they should still be listed. The discussion did not settle a final method for quantifying these effects.

OUTCOME The findings and high-impact comparisons are to be structured for further research, but the group did not decide which to include in forecasts or how to quantify community impact. (03:05, 08:56, 11:13)

Zurich Hybrid Location

7 min · **Samuel**, **Matthieu** and **Tiago**

Samuel said he and **Joshua** were aligned on finding a new location in Zurich, partly for cash-flow reasons, alongside the Indonesia focus. He described a possible pop-up that would be presented as a location for at least 1 year, and said a site could be less than 6 square meters, while 30 to 100 square meters would be welcome. He called the format hybrid, combining robotics and people rather than being fully autonomous or run only by humans. Corsa was also working with people at ETH and hoped to establish an official connection.

Matthieu suggested adapting a nearby pizza vending-machine concept to sell pasta. **Samuel** said Corsa's fresh-supply and quality approach would need 5 to 7 square meters at minimum, compared with about 1 square meter for the pizza machines. **Tiago** argued that seeing a robot make pasta could be more impressive than receiving pasta from a machine, while **Samuel** resisted treating live cooking as a selling point. He said the first location's approach was not yet known and emphasized execution and moving quickly so choices could be revisited as circumstances changed.

OUTCOME Finding a Zurich hybrid location remained a direction rather than a group decision, and the site size and whether customers would see the robot cooking remain open. (49:16, 52:44, 55:03)

Also discussed

- **Tiago** offered a roster to help start the financial model; **Jonas** agreed that the work would involve trial and error. (20:19, 21:30)
- **Samuel** declined using NotebookLM for now, citing subscription cost and the need to learn remote collaboration. (33:15, 33:57)

03 · RECAP

Key points

- Everyone is to upload work to the drive by lunchtime on 9 October, and **Samuel** and **Joshua** will review it that day; **Samuel** said the project continues after 9 October, with the interim presentation on 22 October. (36:46, 18:08, 19:07)
- **Tiago**'s preliminary research found that 56% valued healthfulness, customers liked Oakberry's smaller portions, 80% liked customisation, and research he cited found that 78% of Gen Z and 67% of Millennials liked the idea of a meal-based subscription. (03:05, 04:08, 06:54)
- **Jonas** said customer acquisition costs are high in the first weeks and months of opening in Indonesia, and that his restaurant cost-of-goods-sold and margin research was still broad; he expected proper figures in a couple of days. (10:36, 14:09)
- **Samuel** identified money affected and number of people affected as impact indicators; **Jonas** also raised lasting impact and the likelihood that people remember the name and become customers, while **Samuel** said community effects should still be listed even when difficult to quantify. (11:13, 12:24, 13:13)
- **Samuel** said no one should contact Indonesian restaurants because those interviews relate to investors and he would handle them; he authorized **Tiago** to send the adjusted project scope, the version with the red title page, to the University of Gadjah Mada. (39:32, 43:55)
- **Samuel** described a Zurich hybrid location combining robotics and human involvement; he said 5 to 7 square meters was the minimum for fresh food and fresh supply, and that a fully autonomous or human-only format was not the plan. (50:50, 51:37, 52:44)

04 · RECAP

Ideas discussed

Offer Different Portions

Tiago proposed smaller portions for a quick, light meal and larger ones for customers who are hungrier, based on his Oakberry research. **Samuel** did not respond to this specific proposal. (04:08)

Explore Subscription Plans

Tiago proposed subscription plans for drinks or food and drinks, with different plans and limits, as a source of constant income. **Samuel** said the idea had been discussed before and should be written down, but did not agree to implement it. (06:54, 07:26, 08:19)

Build Food Community

Tiago suggested that Corsa could offer a hangout space and sense of belonging, and **Samuel** asked the team to explore food-related community models such as subscriptions, family plans or plans for two. No particular model was selected. (08:25, 25:48, 26:24)

Use NotebookLM

Tiago proposed using NotebookLM to connect research from contributors' sources and offered access through his subscription. **Samuel** declined using it for now because of the cost of a collective subscription and the need to learn to work remotely together. (31:19, 33:15, 33:57)

Survey Indonesian Students

Samuel suggested a short student poll, estimating 50 to 100 responses from 1,000 students, and also raised possible outreach to a school and teachers. He proposed a broader introduction to the University of Gadjah Mada; **Tiago** was authorized to send the adjusted project scope, but no poll plan was finalized. (40:20, 41:39, 43:55)

05 · RECAP

Decisions

01 Do not contact Indonesian restaurants at this point; **Samuel** will handle the interviews because they relate to investors. (39:32)

02 The group will not use NotebookLM for now. (33:15, 33:57)

03 Everyone will upload their work to the drive by lunchtime on 9 October. (36:46)

04 **Samuel** and **Joshua** will review the uploaded work on 9 October. (36:46)

05 **Tiago** is authorized to send the adjusted project scope, the version with the red title page, to the University of Gadjah Mada. (43:55)

06 Community effects should be listed even when they are difficult to quantify. (12:39, 13:13)

Next actions

Tiago

TASK	DUE
Write a structured document of the customer research findings and add it to Google Drive. (05:25)	No date
Provide a roster to help with the financial model. (20:19)	No date
Find a folder structure for Team A. (37:27)	No date
Send the adjusted project scope, the version with the red title page, to the University of Gadjah Mada. (43:55)	No date
Send **Samuel** the friend's LinkedIn profile. (45:59)	No date

Jonas

TASK	DUE
Develop proper figures for restaurant cost of goods sold and margins. (14:09)	in a couple of days
Reach out to his friend in Indonesia to explore whether he can provide useful information or connect the group to relevant university contacts. (42:58, 45:59)	No date

Matthieu

TASK	DUE
Share links to his culture and geography work. (27:07)	Wednesday at the latest

Samuel

TASK	DUE
Review the uploaded work with **Joshua**. (36:46)	9 October

No owner

TASK	DUE
Share research in the group chat, save it to the drive, and provide the drive link. (29:54, 30:44)	No date
Upload work to the drive. (36:46)	lunchtime on 9 October
Find a folder structure for Team B. (37:27)	No date
Look out for a suitable, potentially cheaper location in Zurich and let **Samuel** know if one comes up. (50:02)	No date

07 · RECAP

Open questions

- Which customer-research findings and competitor examples should inform the financial forecasts, and how should their impact be assessed?
  Raised by **Jonas** (10:36, 11:54, 12:24)
- How much of Corsa's requested work is realistic within the capstone project's available time and capabilities, and how will the group manage review and adjustment after 9 October?
  Raised by **Samuel** (14:45, 18:08, 19:07)
- What concrete Indonesia data is available on cultural fit, food culture, herbs, menu items, and whether wheat-based Italian-style pasta fits accepted dietary norms?
  Raised by **Matthieu** (24:47, 46:48)
- Which community-based food model, such as subscriptions or family or two-person models, would suit Indonesian customers?
  Raised by **Samuel** (25:48, 26:24)
- What university outreach or student poll, if any, will the group pursue, and who will coordinate it?
  Raised by **Samuel** (39:32, 40:20, 43:55)
- What size and specific site will the Zurich hybrid location have, and will its first location show the kitchen or robot making food?
  Raised by **Samuel** (50:02, 50:50, 55:03)

08 · RECAP

Per person

Samuel

Corsa representative who guided research priorities, set review and sharing expectations, and discussed Indonesia outreach and Corsa's possible locations and customer experience.

POINTS MADE

- He asked the group to communicate in advance, noting that **Ana**'s update had arrived 20 minutes before the meeting.
- He asked for research findings to be structured and prioritised, with key points near the top and both text and graphical illustrations.
- He recommended comparing competitors on major cash-flow or community effects, keeping Oakberry in view and assessing money and people affected.
- He said community effects may be difficult to measure or link to spending, but should still be listed.
- He expected prepared research and materials by 9 October, with time for review and adjustment, and said work would continue afterward.
- He asked **Matthieu** about Hofstede's cultural dimensions and encouraged him to work through culture and geography during the week.
- He saw Indonesian community orientation as a possible opportunity and asked the team to explore food-based community models, including subscriptions, families, or two-person plans.
- He asked the group to share research in the group chat and drive, and requested **Matthieu**'s links by Wednesday at the latest.
- He said the team would not use NotebookLM now because of collective subscription costs and the need to learn remote collaboration.
- He set lunchtime on the 9th for work uploads and said he and **Joshua** would review the material on the 9th.
- He prohibited contacting Indonesian restaurants because those interviews related to investors and he would handle them; he also suggested checking HSG's university links before approaching anyone.
- He proposed a short student poll, estimating 50 to 100 responses from 1,000 students, and also mentioned asking schoolchildren and teachers.
- He suggested a broader introduction to the University of Gadjah Mada and authorized **Tiago** to send the adjusted project scope with the red title page.
- He said external contacts should receive no documents and information gathering should benefit the whole group; he welcomed **Jonas**'s contact and requested the LinkedIn profile.
- He left Indonesian cultural fit, herbs, and menu choices, including sautéed chicken, unresolved.
- He said he and **Joshua** were aligned on finding a Zurich location for cash-flow reasons and described it as a pop-up presented as a location for at least 1 year.
- He described a hybrid Zurich site with robotics and human involvement, said one robot could fit in 6 square meters, and noted larger areas would be welcome.
- He said 5 to 7 square meters was the minimum for fresh food and supply, compared with pizza vending machines about 1 square meter and 2 meters high.
- He said Corsa was working with people and the University of ETH and hoped to establish an official connection representing the group.
- He said the first hybrid location's kitchen visibility was undecided and live cooking should not be assumed to be the future focus or selling point.
- He urged the team to focus on strategy and execution, saying faster progress would let Corsa revisit choices such as showing the robot as circumstances changed.

TASKS

- Review the uploaded work with **Joshua**.

Tiago

Capstone group member who presented preliminary customer research and proposed research, collaboration, and customer-experience ideas for Corsa's Jakarta work.

POINTS MADE

- His preliminary research found that 56% valued healthfulness, Oakberry customers liked smaller portions, and 80% liked customisation.
- He cited research indicating that 78% of Gen Z and 67% of Millennials liked the idea of a meal-based subscription.
- He suggested smaller portions for quick, light meals and larger portions for hungrier customers, based on Oakberry feedback.
- He proposed tiered subscriptions for drinks or food and drinks, with different plans and limits to create constant income.
- He said customers may value a hangout space and sense of belonging, like those they seek at Starbucks or Oakberry.
- He proposed contacting universities in Jakarta and successful local companies to learn about customer profiles at similar restaurants.
- He said he understood **Samuel**'s expectations and noted that he had a presentation due tomorrow.
- He proposed NotebookLM for connecting contributors' research, explaining its supported sources, Drive connection, and capacity of up to 5 million words, and offered access through his subscription.
- He proposed asking Indonesian restaurants how customers choose between local and Western food, and said he had relevant restaurant addresses.
- He identified HSG's Indonesian partner as the University of Gadjah Mada, with 55,000 students, and mentioned bachelor's and master's collaboration with the University of Sangam.
- He argued that customers would find it more impressive to watch a robot make pasta than simply dispense it.

TASKS

- Write a structured document of the customer research findings and add it to Google Drive.
- Provide a roster to help with the financial model.
- Find a folder structure for Team A.
- Send the adjusted project scope, the version with the red title page, to the University of Gadjah Mada.
- Send **Samuel** the friend's LinkedIn profile.

Matthieu

Team A member working on culture and geography who discussed Indonesian cultural dimensions, the need for concrete local evidence, and a pasta vending-machine concept.

POINTS MADE

- He explained that Hofstede's country comparisons cover cultural dimensions and identified power distance and individualism versus collectivism as relevant to Indonesian operations.
- He said Indonesia ranked among the most collectivist countries in an evaluation he had seen, while noting that the specific evaluation mattered.
- He linked collectivism to group belonging, social norms, and family priority, and questioned whether wheat-based Italian-style pasta would fit dietary norms without concrete Indonesia data.
- He said he knew the framework from earlier research and could share the country-comparison website link.
- He suggested adapting a pizza vending-machine concept to sell pasta.

TASKS

- Share links to his culture and geography work.

Jonas

Team B data analyst who raised questions about forecasting customer research, reported on restaurant cost research, and offered a possible Jakarta contact.

POINTS MADE

- He asked whether customer research was relevant enough for forecasts, noting high customer acquisition costs in Indonesia's first weeks and months of opening.
- He argued that impact should include lasting audience attention and whether people remember the name and could become customers, not only reach.
- He said his research on restaurant cost of goods sold and margins was still broad and expected proper figures in a couple of days.
- He described developing the financial model as a process of trial and error.
- He offered to contact a friend studying electronics and possibly robotics in Indonesia, who works in marketing for a Jakarta SME, for useful insights or introductions.

TASKS

- Develop proper figures for restaurant cost of goods sold and margins.
- Reach out to his friend in Indonesia to explore whether he can provide useful information or connect the group to relevant university contacts.

Points to double-check

From an automatic check (gpt-6-luna). Some may be false alarms.

DIAGRAMS 9 October Review Timeline
Diagram removed: not supported by the notes.

NEXT ACTIONS Find a folder structure for Team B.
Owner "**Paul**" is not a meeting speaker; left without owner.

OVERVIEW Overview
The recap says **Joshua** will review the work with **Samuel**, but the transcript names **Joshua** and **Samuel** only as reviewers of uploads, not as people reviewing **Tiago**'s work specifically; it also says **Tiago**'s presentation is due tomorrow without support in the cited meeting details?

MAIN TOPICS Indonesia Market Research, paragraph 3
The transcript does not support the claim that **Jonas** could approach his friend individually; **Samuel** said **Jonas** could reach out and asked him to send the LinkedIn profile.

MAIN TOPICS Research Deadlines and Coordination, paragraph 3
The transcript assigns Team B folder structure to **Paul**, not to the group or an unassigned owner.

MAIN TOPICS Zurich Hybrid Location, paragraph 1
The transcript says 30 to 40 to 50 to 100 square meters would be welcome, not specifically 30 to 100 square meters.

MAIN TOPICS Zurich Hybrid Location, paragraph 2
The transcript does not say **Tiago** argued that watching the robot make pasta would be more impressive than receiving pasta from a machine; his comparison was to simply pressing a button to get pasta.

NEXT ACTIONS Find a folder structure for Team B.
The transcript assigns the Team B folder structure to **Paul**, not to the group or an unassigned owner.

PER PERSON **Samuel**: He said Corsa was working with people and the University of ETH and hoped to establish an official connection representing the group.
The transcript says **Samuel** was working with people and the University of ETH, not that Corsa was working with the University of ETH.

PER PERSON **Tiago**: He proposed asking Indonesian restaurants how customers choose between local and Western food, and said he had relevant restaurant addresses.
Tiago proposed asking restaurants about customer choices, but **Samuel** explicitly ruled out contacting Indonesian restaurants at this point.

PER PERSON **Tiago**: He argued that customers would find it more impressive to watch a robot make pasta than simply dispense it.
Tiago compared watching the robot make pasta with simply pressing a button to get pasta, not with simply dispensing it.

PER PERSON **Jonas**: He offered to contact a friend studying electronics and possibly robotics in Indonesia, who works in marketing for a Jakarta SME, for useful insights or introductions.
Jonas said his friend studies at a university in Indonesia, but the transcript does not identify it as the University of Gadjah Mada.

Transcript

00:23 **Samuel** Hello. Hello to you. Can you hear us? Do you hear me? Like I said, I'm in a lecture. I'm only able to listen. Oh, okay. All right. Perfect. Perfect. So, great. And we were almost everything. Did anyone get an update from **Ana** on what she was working on?

00:47 **Tiago** Not yet. And why? I had a rough weekend. I listened on person things, but I didn't really take the time. I'm sorry.

01:10 **Samuel** Okay. The reason is because **Ana** gave us a message 20 minutes before the meeting. So, as I said, communication is really important, but 20 minutes before a meeting nobody can react. So, I take that as a reminder for the future, guys, that whenever you have something, let us know in advance. We cannot work on last minute like 20 minutes' reminders or something. So, take it as a future rule that we let each other know beforehand so that our employees, our partners can react to what we do. Then who would like to start? Who would like to start? Show us a bit on what he or she worked on.

02:04 **Tiago** I can start. Yes. On my side, I started building some customer profiles based on the strategy used by Oakberry but also by Starbucks because I think Starbucks is also relevant. If our, if the, wait, I took some notes, sorry. If the target group are young professionals, students, people that are also more connected to, also like to globally, like to the internet and everything, so, like, active young individuals, how it's written in the documents. I thought Starbucks was also somewhat relevant on some aspects on how they, and also because there are more studies about the Starbucks customer base than from Oakberry because Oakberry is pretty recent.

03:05 **Tiago** And I found some interesting numbers that I can share, and I'm gonna add them to, I'm gonna add a report at the end on the Google Drive so everybody can take a closer look at it. But some relevant points I wanted to share was, of course, taste is the most important aspect, but we knew that. But something that we also with price and convenience and healthfulness of 56% healthfulness, which everything until now aligns with Corsa. The something that I thought interesting is that having access to multiple size options, a lot of things that people liked about Oakberry was that the portions were not too big, which I think is kinda weird.

04:08 **Tiago** But some people are just looking for something small to eat and fast to eat, and that's something they liked at Oakberry. If we adapt this at Corsa, I think the way this could be adapted would be to have different sizes. I don't know if that was also already the case in Zurich. But having a smaller option for people who are not that hungry but just want to eat something, as well as something that people can eat if they're really hungry. Also, 80% of customers like the fact that Oakberry is customizable. A strong demand for having the ability to customize their food.

05:08 **Tiago** Which I think I mentioned in the first meeting, but I'm not sure. I think I really agree with this point.

05:20 **Samuel** Tac. Do you have all of this written down somewhere?

05:25 **Tiago** Yes, but I have just notes I took, but I'm going to write a document with all the points structured.

05:33 **Samuel** Okay. Because what I saw from now until now is that you really have a good eye in terms of research, and especially, for example, the example you made right now with the different sizes. And last time we talked about something else that was quite remarkable to have written down. The really important thing is here that once you have all of that together, please and put them into categories. I know you will make that, but I'm just saying it as a that I said it. Make, put it into categories and make it structured.

06:14 **Samuel** Yep, structure, of course, but the thing is with text is that people nowadays, even myself sometimes, we may not read to the end. So put the important things

06:28 **Tiago** on top. And do you like graphs? Like graphical illustrations. I don't know. I know I like it.

06:37 **Samuel** I mean graphical, yeah, of course. I love everything that is somehow visible with colours and stuff. But with graphs, the thing is you cannot go into detail. So I think both is important.

06:54 **Tiago** Just the 2 last points I wanted to make today, because I already thought about this last meeting and I ended up forgetting to mention it, was I had this idea, and the research I made confirmed this idea, not on purpose. 78% of Gen Z and 67% of Millennials said that they liked the idea of having a meal-based subscription.

07:26 **Tiago** My first idea was maybe, of course, I could have some sort of a subscription-based plan for the drinks, where you pay a monthly subscription and you have access to, let's say, drinks with a hard cap of, like, I don't know, like really, if you wanna have, you can have different plans. This could also be applied to food and drinks, and you could have different times. The good point with the subscription-based idea would be that nobody gets food 20 times at the same place, or, like, goes every day. Some people will do maybe, but not everyone. Absolutely. But you have, like, this constant income.

08:19 **Samuel** We discussed this before, but I think that's 100% something to be written down.

08:25 **Tiago** Mm-hmm. And the last point is that when people buy at Starbucks or Oakberry, they're not only paying for the food, they're paying for the vibe, to have a place to hang out and for, like, this sense of belonging, which could also be adapted. But that's some really initial research. I want to go deeper on some points, and also, if it brought you some ideas, I'm happy to get some other perspectives I could deepen. That's

08:56 **Samuel** it for me. In terms of the question, which competitors or comparable concepts already exist, I really would love to have the approach here still to have an eye on Oakberry, because the thing is, with Starbucks, in the end they had, and they will close many locations right now because they were also betting on the location, on the size, and then they were too big for, like, students to come for hours and just have a coffee and those things.

09:32 **Samuel** So if there are some good parts about the concept, and I'll make an example for Starbucks, they launched an app, I don't know how many years ago, but I think in the last 2 or 5 years, where you can put a certain amount of money as a Guthaben, how do you say that in English? A voucher. A voucher.

09:58 **Samuel** And Starbucks quickly became somehow a bank, a small bank, or maybe big bank, because everyone was buying the vouchers or got some, yeah, cash flow running food, yeah. And if we compare with other competitors, then please only with necessary

things that have a big impact on cash flow or big impact in terms of community, but, like, big-impact things. Let's not compare small running gags or small things in terms of marketing or something. Unless it's all query. Unless it's Oakberry. Yes, you want us?

10:36 **Jonas** Yeah, I mean, these are really interesting insights, and the thing is, on my side, we're gonna do some modeling, forecast things, and these are, I mean, since we're gonna open Indonesia, customer acquisition costs are really high in the first weeks and months of opening. These are really interesting, but we would also need to know whether they are really relevant so we can also take them into account when we do our forecasts. So maybe do you already have an idea about that? Because I've done like, yes, there are

11:13 **Samuel** 2 indicators, the 2 easiest. One is money, cash flow; the other one is the amount of people that will be affected. Yeah. Just ask yourself those 2 things. If you have a certain amount of money that is affected, like a big amount of money in terms of the concept, and you get some numbers from the financial team soon, you will realize, okay, I think that's important. And that's why I said structure it from top to bottom, because you will find things that may not affect many people, which sound important but really aren't. So those 2 things, I would say, are the most important indicators.

11:54 **Jonas** Yes. So the optimal would be to have, for the smallest amount of money, the largest impact possible in terms of people getting affected, right? If they get affected in a positive way, of course. Yeah, in a positive way, of course. Yeah, but positive in terms of, on TikTok, you can have millions of views without having any impact because the average watching time is 2 seconds, so it doesn't have a lasting impact.

12:24 **Jonas** So we should also assess a bit more qualitatively, like, okay, we reach X persons, but is it a lasting impact, and what's the likelihood that they actually retain our name and our possibly future customers, right?

12:39 **Samuel** I mean, yes. Yes, but the thing is, going viral on Instagram or TikTok can also affect the community in a positive way that you don't see, that you cannot measure in the beginning. But from time to time, you realize, oh my God, this place is full. Why are the people making pictures? Why do they meet here? So I would say the example of **Tiago** before, in terms of what people liked, is that they have a place to hang out as well.

13:13 **Samuel** Is something that you can't really measure in amount of people right now, and you cannot really tell how much money you have to spend because in the end you should spend almost zero money on community. But list it on the list. At least you have it on. That's what **Joshua** said today to **Marius**. I don't wanna read it wrong, but I think he said something like, "Oh, sorry, it's in finance. It's in the finance chat." Try to fill out the first numbers, try to fill out the first texts. There is no wrong or right because you are estimating. Yeah. Okay. Another thing, **Tiago**, or good to go for **Paul**? Yeah.

13:59 **Samuel** Or let's maybe first do the group market entry. I think if it makes more sense to not maybe, sorry, **Paul**. Yeah, you want

14:09 **Jonas** us. Any other points? Not really. I mean, from my side, like, I'm doing research on basically what's optimal for a restaurant-specific cost of goods sold and margin you can have to get your ROI targeted, but it's not really of relevance yet. It's still quite broad, and it's bizarre, but I think I'll be able to have some really proper figures in a couple of days when I'll have more time to really dive into

14:45 **Samuel** Okay, what do you mean by a couple of days? I think next week. This week I have to get a look at the timeline again. Give me a second. On the 9th of October, right? Yeah. But then, the expectation for today was that you guys show us what type of documents you prepared, what type of research you prepared, what did you collect, and where do you need maybe a little bit more, you know, impact on something or support? Because right now we don't see anything in terms of the menu of operating data or staffing or margins, equipment, whatever. Yeah.

15:37 **Samuel** I have no problem with that. You guys need a little bit more time, but then again, if you tell us, we could have postponed the call maybe to the 7th of October. Yes, **Matthieu**? Two

15:55 **Tiago** times. The mic.

16:08 **Samuel** We cannot hear you? Yeah, no, we can, I think.

16:22 **Tiago** Not here? Why, wait, can I just share an idea I had? It's really quick. I was thinking about emailing some universities in Jakarta and some successful companies there also to get more insights about the type of people that go to the restaurants that have a similar profile, saying that it's for group projects from the University of Sangal

17:04 **Samuel** Let's, sorry, give me one second because **Matthieu**, I will.

17:19 **Tiago** Wait, I have an idea.

17:22 **Samuel** I have an idea too, so let's call him. Yeah, that's what I have to do. Can you hear me, guys, now? Yeah. Okay, good. Okay, no way, it's not working. So what I wanted to say, this one about the remark that for me, I, that the weekly meetings were supposed just to take what we did and not to point a specific moment I was supposed to be building some more, if you understand what I mean or that. Yeah, I understand what you mean. I understand what you mean.

18:08 **Samuel** But if we think about delivering some final results the day before or like the deadline, we need some time to go through, and then you need some time to adjust it. So I know you, you are students and you're used to learn and put information in your head in the way, really less second. I did it the same for many years, but in terms of the capstone project, I don't think that's, I don't think that would work for the next 2, 3 months to continue like that, because I can already tell it's not an exam that we fulfill on the 9th of October. It's where we have to like work on.

19:07 **Samuel** So everything after the 9th of October is as important as what we do today. It's not like we can fulfill something on the 9th and then it's done and we can keep going maybe on the 12th. So having said that, yeah, we can keep it to that you guys just show us what you did in the meantime. But if I don't see a paper or not a screen sharing, I know it's not enough. Okay, yeah, I understand this, it's a bit more fun. Just for my part, I have a presentation to do that's due tomorrow.

19:59 **Samuel** So still I have to work, and during the work weekend, so it's time, it's more than I plan for entering on Wednesday after the presentation. Like the whole day. Yeah. Yeah, I'm not sure. I think it does.

20:19 **Tiago** Yes, sorry, guys. Yeah, but kids crying. Yeah, I think we should just focus on the next steps. We can also call, I don't know, Thursday. It's okay for me. We just need to move on and deliver something. I think this is what you mean, Sandy. Yes, for the financial model,

for my part. I can give you a roster that will help you a lot, then you don't have to spend too much time on Excel sheets already, and yes, just start, and then you get a feeling for the numbers, you know.

21:00 **Tiago** 'Cause each time you put something in, you think about, is this really something? And then at the end you look at the, I don't know, like, on the flow or on the result, and then you know, okay, this is the right thing or this is not the right thing, and does it make sense or not?

21:30 **Jonas** Yeah. Just trial and error.

21:37 **Samuel** Okay, then we had **Tiago**, **Matthieu**. In terms of culture and geography, I'm expecting, I'm assuming, sorry, I'm assuming that, yeah, you will go through the work during this week. Is that okay? Yeah, it's only, sorry, I had you on mute. Say it again. Easily fine. Okay. Then, yeah. **Paul**, for also **Marius**. Yes. Are you familiar with the cultural dimensions of Geert Hofstede? Of Geert Hofstede, that's the author of the original research. No, show me something new today.

22:35 **Matthieu** I will show you. I compared **Joshua**, do you have you heard about it? I don't know if I can send you the link, I think, but I'm on your screen sharing. Sorry.

22:56 **Samuel** No. Does it work? I don't share, I don't think I should screen. You can send it to me and I can share it as well. Whatever. Yeah, okay. You have to share a screen sign, this with a mitten nach oben. Yeah. Müsste es eigentlich kein gesamter Bildschirm oder so. Aber ich sag. I think. Here. How it works. Yes. Yes. Basically the original work of Hofstede.

23:31 **Matthieu** That I've written a paper about this last semester, just compares, I think it was over 100 different countries in different cultural aspects, how they, where they are similar and where they diverge. And what I found very interesting for Indonesia, for one, is the difference in the acceptance of power distance, which will be very important for the operational business. But more importantly, individualism versus collectivism. The next step for me would be to see what data I can find into how collectivism, where Indonesia is the most collectivist country in this evaluation worldwide. Depending on the exact evaluation, but generally in the whole world, one of the most collectivist countries. Collective what? Kollektisch. Kollektivist. In

24:43 **Samuel** One sentence in German, sorry.

24:47 **Matthieu** Also wenn man vergleicht, Individualismus versus Collectivism, is Indonesia with the host and bewerting as collectivistic Islam. Which means that they have very high emphasis on belonging to a group, of adhering to social norms. Family has highest priority, which I am afraid could have negative impact if we a wheat-based Italian-style pasta, for example, is seen as something that does not stick to the norm that they accept as part of their diet. I know for the Philippines there is data on especially how rice fits into the culture. I still have to see what there is concrete data for Indonesia that I can use.

25:48 **Samuel** Great stuff, and really important for everyone to know. It's a big chance. I chose Indonesia because I know they bet on community, and I've seen it in Hong Kong, and where it's insane. You can take a Danish bakery that just recently opened, and people go crazy about it, and they go crazy about it together. Run clubs in Hong Kong and other places, Singapore, huge. Huge. So if there's a big group, there's even a bigger group joining. You took it out as maybe something, yeah, to be really aware of.

26:24 **Samuel** So I would say to also justify that a bit, and it doesn't have to be a big text or something, but maybe 5 bullet points on how to take it as a chance, the collectivism, I cannot say. To take it as a chance and how to escape individualism in terms of community. Because we're gonna give that in terms of food, 100%. But let's try to give them communities. So how, if someone, if **Tiago** is saying subscription-based model, would the community like that, or do they need a family model? I don't know. Or do they need a model for 2? What does it really mean?

27:07 **Samuel** It may be a stupid example right now, but I hope you get what I mean. So the more you exchange your information, I know you don't have an office and you don't work eight hours a day in the same place, of course, but the more you share with each other, and this is what I mean when I say the group chat is or should be a group chat. **Matthieu**, at the latest on Wednesday, I want to see links from you. I want to be like, guys, I did a deep dive. I was in for three hours. This is my summary. I collected this data because I had to. This is my part.

27:54 **Samuel** I share it with you. Please work with this information. Maybe **Paul** is working on it the same night, and maybe **Tiago** the next morning. But you guys are so strong together, I think you don't see it. You see it now. Because **Paul** really did something here. And you all can use it. **Jonas** gave a thumbs up. I think **Matthieu**, you did that one time, and even **Tiago** was also really inspired by this information. **Paul**, can I ask you how long did it take you to do that?

28:32 **Matthieu** Since I already dove really deep into this topic last semester, where I didn't compare Asia, I compared Russia to Central Europe, but I am familiar with this framework, so it wasn't that difficult.

28:48 **Samuel** Okay. How long did it take you to do that?

28:52 **Matthieu** I mean, this is a website where you can type in which country you want to see the scores of. That takes two minutes. But the reason, yeah, this I can send you the link to this.

29:05 **Samuel** This is not, this is just typing in the country and comparing. Okay. Sometimes two minutes can be enough, guys. Trust me, I did a course on two weeks, imagine. I had sometimes only two minutes on some things. And then it took me an hour maybe to find out a better solution after. But I had an overview. I knew what to expect. And this is where I would like to have you very soon. By very soon, I mean tomorrow. Like really tomorrow. It can be ten minutes, but ten minutes can be enough. It can be the end of the lunch break, it can be something in between classes. It's just ten minutes.

29:54 **Samuel** Just one question to ChatGPT. Give me references. Give me websites. Let's compare it. Give it to Claude. Pull it together. And ask yourself, does it make sense or not? This is the research phase which we are in, and I don't want to stress you in the end or to stress on indications before delivery time. This is where we can expect failures, and I really don't see us there. So let's take at least the days that we have now remaining and collect data with each other, share the data in the group chat, save it down in the drive, and send the drive link. Everyone has access to the drive. Just share it.

30:44 **Samuel** Hey, I put that document in that folder. Here is the folder. If someone is not looking at it, okay, their fault. But make it accessible for everyone. Next time with a comment. Save time of the other person. Hey, I looked at this. This is what came out.

Here's the link. It takes you 2 minutes. It takes you 10 minutes. Expectation management. 10 seconds more. Everywhere. 10 seconds more. And we will increase hours of work.

31:19 **Tiago** Can I make a suggestion about also the way to work with files in the group? Yeah. Are you familiar with NotebookLM? Formerly NotebookLM. At first, it's a tool created by Google which was tailored for students. But the good thing with it is that you can upload, if you have the premium version of Gemini, which I have, so I can create it.

31:51 **Tiago** You can create, it's so it's like an AI which is which can have a huge context window, and you can upload up to, I think, like 5 million words to it, like as sources, as PDF, Markdown, Word files, audio, everything. And you can connect it to the drive as well, and when you ask a question to this AI, just like judge bt it's like a normal chatbot, it's gonna make links between the parts done by everyone. And I've used this in a group project. I don't know to what extent you could be interested in it, but it's great because sometimes, like I might be working, I don't know, on like how to reach the target

32:44 **Tiago** The custom, the target customer, and then **Paul** has this really good knowledge on how they behave, and it's gonna connect the two. And then you can build on what other people did, sometimes even without knowing or remembering that he had done that while he was doing the research, you know. I think it can be interesting, but it's up to you.

33:15 **Samuel** No, I got it. Thank you very much for bringing that up. I need to do an upgrade for all the employees that I have in the company. It's a collective subscription, as I've seen right now. I don't think we will make that now. And also, we're just learning on communication. So let's at least try to work remotely together, and I think in the near future or in any other job, you guys are gonna compare at least, "Hey, should I use the AI or should I work with my employees in between that?" So yeah, thank you for bringing it up. I'm always open for new AIs.

33:57 **Samuel** If you have any others next time, please bring it up, of course. This one costs too much in terms of the short.

34:06 **Tiago** No. I have the subscription. I can share it with you.

34:14 **Samuel** I don't think you can. Okay. It's really on every Google account, as I can see here. You know, I have a Google Business Workspace. So, okay. No, it's not a private one. Okay. Great. Great. So then I do my part of expectation management, and I hope I help you with that for this week and also next week. So if we open the plan, shall we?

35:04 **Samuel** We're talking about the business draft review model with evidence gaps. An evidence gap can be an assumption where we may not have the evidence, as, for example, the one from **Paul**. Is it a threat or is it an advantage that this country really aligns on collective? So yeah, but at least we have to put it together, and we have to put all the information together, not only from one, from six. And this is what I was thinking about: hey, is it enough time? So please be keen on that. Today's the 5th. 6th, 7th, 8th.

36:03 **Samuel** So on the 8th, I would expect something by 6 p.m. That's possible, and I want that everyone uploads their stuff in the drive first. Then we have a look through that. And then someone puts that together on the 9th. Who has the most amount of time on the 9th? I think it should be at least 2 people. I can check.

36:44 **Tiago** On the ninth. I got

36:46 **Samuel** some time on the ninth. You don't have to put it together on the ninth, actually, I think. I would have them on the, I would have them on the eighth. You know what? Everyone would upload it by the ninth. It's okay. It's okay. We're gonna have a look at it on the ninth, **Joshua** and I. But please do it by lunchtime. Ninth lunchtime, everyone in his folders in terms of finance, or yeah, please make some clear structures in your team, fuller teams.

37:27 **Samuel** In team A, **Tiago**, please, and in team B, **Paul**, find, how do you say, a structure for the folder that makes sense for everyone so that you guys can define, or how do you say, divide by evidence and maybe references, or you have some PDFs, or maybe you will find the business case of Starbucks, or maybe you will find a book that is open source. So whatever it is, whatever PDF it is, please put it in the folders.

38:08 **Tiago** Just on the idea of contacting the Indonesian unit about, because they have extensive research on customer behaviour in Indonesia, as well as contacting restaurants as a group project and not like as for another company, we could get some relevant insights because theory is something, then they are actively selling to Indonesian and to European, and the idea of contacting other restaurants, like bigger, more famous restaurants, would be to have an idea on how Indonesians relate to Western food and on their choice because I looked at a lot of menus, but at the end we don't know what they order.

39:03 **Tiago** So the idea would be to ask them, on certain dishes that they sell, how different do people behave when they buy that kind of food or something that is more Indonesian-like or totally Western. That would be my idea. And I have some addresses that I would think would be relevant to contact.

39:32 **Samuel** So one really important thing. I don't want anyone right now to contact other restaurants in Indonesia because tomorrow it's related to our investors. I take care of that, to take those interviews. The only thing that I would like, or maybe makes more sense, is maybe HSG has any collaboration with an Indonesian university. Then maybe with more than one. So let's take the one out that has the most amount of students. And maybe to get on a quick call, or I don't know, you guys know the process on how to connect or how to talk to them by email or call or whatever. And to quickly call me beforehand: "Hey, Sam, it's this university."

40:20 **Samuel** We're talking about 1,000 students. Maybe out of that 1,000, we have 50 to 100 students that would fill out our poll. How long does the poll take? Hey, let's not do it longer, let's not make it longer than 2 minutes to do or 5 minutes to do. And then we have a great, I don't know, insight of the behavior of how they eat. And maybe we can do one with a kid school and maybe one with some with the teachers as well or something, so we get a great insight from all types of groups. So

41:02 **Tiago** HSG has one partner university in Indonesia, which is the University of Gadjah Mada. It has 55,000 students. And 55,000 students. And it's a close partner of the University of Sangam, They are collaborating on bachelor's and master's levels, which is pretty good.

41:33 **Samuel** 55,000 people.

41:35 **Tiago** 55,000, yeah. But only one

41:39 **Samuel** in Indonesia. Do you think it makes sense to ask Haiko how to pull that up? Because I don't think it's the last thing we need from them, maybe. And maybe we could make an introduction that is more open, a little bit more like, "Hey, guys, actually, it's a bit short notice, but we just have this group and the capstone project and the Boucher Card, like, give them a proper introduction to the project with the professor or the main responsible person there to prepare something for the next 2 weeks. You know, hey, we have a poll and maybe we have some interviews with, or maybe you guys have similar projects."

42:23 **Samuel** Maybe they have another project in-house in terms of robotics. Maybe they have something in terms of buying and selling food, maybe they have something in terms of delivery. So I would make it a bit more, think like a CEO. A CEO, he wants to connect with the company, and the school itself is also somehow a company for us. So let's try to connect with the CEO first, then let's talk about the certain things because I was not expecting such a big school. **Jonas**, sorry. Thank you for waiting.

42:58 **Jonas** I think I mentioned before, but I have a friend of mine who owes me some services, that studies in these universities. He studies electronics and maybe some robotics. And he also works as a head of marketing for an SME based in Jakarta. So even though he's not studying marketing, he might have some insights, or at least, like, of how the customer behaves there. If I'm allowed, I can gladly just reach out to him and maybe give an intro to you if that's needed, and if he can see if he can bring us anything relevant.

43:31 **Jonas** They might have, you know, I don't know, like robotic clubs in the university, marketing club book, or just a chair of marketing where they have certain data about how the customer behaves, and some of these data are maybe really relevant and are not accessible for us from Switzerland. So, I mean, it doesn't do that, but don't want to just take the initial chess if you

43:55 **Samuel** don't want to. No, that's really cool. There's just 2 things to be aware of. First of all, we cannot share any documents with those people. Please make sure about that. In terms of asking the school, **Tiago**, I give you the permission to send the adjusted business scope, project scope that you've collected in the end, that you've fulfilled in the end, the one with the red title page. Of course, in terms of the university, we have to give them an understanding on what we do.

44:31 **Samuel** In terms of friends and everything, great and cool, but in an official way, maybe on our weekly calls, put them onto the weekly call. Hey, do you have time next Monday? Maybe say 6:30, and so everyone has the chance to maybe say hello. So we do a small introduction, a really small one, and then we can drop the questions, or even better, maybe even better for the first call beforehand. Our group collected those questions. Could you answer those questions, or do you have time, or do we have to think about how to reach that person before we just say, “Hey, we are the cool ones from Corsa”?

45:17 **Samuel** I think it should be, we should be able to collect information for everybody in the group. That's really important, and not only for one. But of course, yeah, maybe for this week, and you can catch him for something small. Try to reach him for something and ask him after, “Hey, do you actually have more time? We are a group of 6.” Yep.

45:44 **Tiago** 6:30 would be 11:30 there. At 23:30. Mm-hmm. In the morning, in the afternoon, at night. Oh, almost midnight. Just, I mean, it's no button. So it makes no sense at all.

45:59 **Samuel** Yeah, that's what I mean. No, maybe you reach that person by yourself and try to work with him maybe until the 9th or the 12th or whatever, and then we collect data, and then I know what questions certain people have. Yeah. Yeah. But you can send me his LinkedIn; I would be interested. Yeah. Wait on the pitch right now. Okay, I think then, yeah, we are aligned. Thank you very much. Last thing is on our project scope, which I told you to focus on in terms of working on the project. Please keep an eye on the questions. That's all I wanted to say.

46:48 **Samuel** Also, this topic, I see it a little bit separate because of what **Paul** and Diogo and **Jonas** just mentioned and found out. You see, it's a really big thing, maybe because Indonesia has culture, which, I mean, is a beautiful thing. It's easier to frame people in Europe, as you can see in the Western Hemisphere. So yeah, maybe it's a bit harder to get to the cultural fit there. What herbs? Again, what herbs do we have to implement in the food? Still a question that I didn't answer today. Do we have sautéed chicken on the menu? I'm joking, I don't know. So yeah, those are actually things that are really important as well.

47:40 **Samuel** And then for the financial team, of course, number

47:44 **Tiago** Seven, a pillar two. Just for me working, do you allow me to connect the drive to my notebook, Adam? Gemini notebook. Because I like to connect the

48:06 **Samuel** You cannot really... You want to connect within the company documents? Like with Google Business, with the M. No.

48:14 **Tiago** I... Oh no, I cannot. Sorry. I don't think I can connect it to my Google Gemini notebook because it's not my account, so...

48:23 **Samuel** But to be honest, you can just, I think, set in the Einstellungen, in the settings, that you want to get a notification whenever someone is uploading a file. And it's not that many files. So just download the files and you put it in your L. It's good. In terms of your Pocket thing, similar Pocket call thingy summary that recognizes people's voices and everything. Let me know what you need and let's implement it for next time, for the next meeting, for whatever. It's here. Okay. So you just... or you just send it to us. I think it's much better than the one from Pocket. And maybe go to California and sell it to Apple.

49:16 **Samuel** I don't know. Pocket is from Apple. I think they bought it. It looks really similar to Apple devices. And it really has problems with Swiss German and everything. Yeah. All right. Anything else? **Joshua**, financial team? You're happy? You want to mention anything else? You don't have to? No, for me it's good. For my part. Let's just start. Maybe last thing, so that you guys understand what we're doing on the other side. **Joshua** and I, we had a great meeting on Saturday, and we are really, how do you say, aligned that we have to find a new location in Zurich.

50:02 **Samuel** I was thinking about Indonesia all the time and focusing only on Indonesia, but we also have good reasons in terms of cash flow to create another location in Zurich, if possible. It should be a pop-up location. So if you know anyone, if you hear something, of course let us know. We don't sell it as a pop-up at all, so at least 1 year, but pop-up locations usually tend to be much cheaper. So in terms of taking the money for a robot, it would be more interesting for us than taking the money for rent and giving it to a landlord that we don't even like.

50:50 **Samuel** So if we have a cheaper location spot available, it can be really small this time. I think **Marius** was asking last time. So **Marius**, also for you. This time it can be less than 6 square meters. A robot, or one robot, would fit into a 6-square-meter location, but of course, 30 to 40 to 50 to 100 would be great. Then also for Corsa, we call it a hybrid location. I think that's an official thing that we can mention. Hybrid means it will be the first location to implement robotics as best as possible. But of course, we need human beings.

51:37 **Samuel** So maybe keep that just a little bit in your brain, just that you know it will not be a fully autonomous location, and it would never be just a location run by humans. Yeah, that's one thing. And we are working really close with people and the University of ETH, and I hope we will soon have a connection with them officially to also represent you with the ETH people.

52:13 **Matthieu** I just had an idea since you're talking a lot about implementing a robot in a restaurant. There is a charging station for electric vehicles very near where I live that has a vending machine for pizza. Yeah. Did you think about maybe implementing this concept of a vending machine for pasta?

52:44 **Samuel** Yeah, but with a much higher approach of quality, and in order to do that, it cannot be that small. It cannot, it's just not possible in terms of fresh food, fresh supply. That's why I said I think 5 to 7 square meters is the minimum. And those vending machines are like 1 square meter, right, and like 2 meters high. And or maybe one of, and if, yeah, probably for pizza it's smaller since they're only

53:17 **Tiago** Put in the frozen pizzas like discs. I would be big, I think. Other, I just

53:27 **Jonas** Yeah, you have an ask. Yeah, you just mentioned FR. I know maybe you're already in contact with them, but at start with some contacts regularly with like the robotics club of ATA. And so they are like really nerdy students into robotics, like really hardware. I can't see if we can, if that can be meaningful to just have them on the board or not. But let me know if you want, and then I can maybe like connect you or just yeah

53:55 **Samuel** Just that, you know, we are finding or we are on the... We try the best suitable way, and we talked to students, and the students managed to go through the professors. Yeah. Funny thing, we did the same way in ISK. So yeah, I think that's the official way. But if you need support on that, we will actually know. Okay, yeah.

54:19 **Tiago** For me, just regarding the vending machine idea, the robotic updates of any machine. I think there is a huge difference between just pressing a button and getting the pasta, and it's made by a robot, which I think it's not something that I'm that much like, "Oh wow." I'm like, "Oh really?" But if it's a robot and then you see the pasta being made by a robot in front of you, that's a totally different thing. That's wow. That's okay, nice. But just having like, "Oh, thick," I don't know, it's absolutely

55:03 **Samuel** We don't even know if we want to show the kitchen in our first hybrid location in Chocorta. I think the approach of live cooking should die in terms of the future of Corsa because, yeah, I mean, Red Bull doesn't show how they fill up the cans by a robot. For sure, it's a robot that fills the cans today. Red Bull shows the experience that you can have with the product, and this is also our focus. So if we save money and if we are in the future with our own AI that is connected with the robotics, to call it Physical AI. Yeah, why not?

55:51 **Samuel** But the people, I don't know if you wanna show the people that a robot who just made their pasta. It's so... it wouldn't be a selling point. It's no. Okay. No. I don't want to rely on that because you get trendy for 6 months once everyone has seen it. Maybe you will see other companies building on robotics. We will maybe we're the first, like, fully implemented franchise, blah. Maybe. We don't know. We don't know what's tomorrow. Maybe in 3 years the market is different. So let's just focus on, again, strategy over no execution over strategy. The faster we execute, that's why those dates are so important.

56:42 **Samuel** The faster we can ask ourselves those questions. Oh, do we want to show the robot through? Because we just have 50 million from investors, okay, then we can talk about it. But until then, and I wish you a lovely week. Really, I do. I wish you all the best for this week and take the opportunities that you can have and stay healthy.

57:12 **Tiago** Thank you very much. Thanks very much. Have a great

57:15 **Samuel** day. Thanks. Bye-bye. Bye. Bye. Bye-bye.
