Recap

01 · RECAP

Overview

On 7 October, the team aligned on how to work together on Corsa's market-entry research, expectations for evidence, and ways to organize the work. **Tiago** described his experimental-marketing role and customer-behavior research; **Ana** covered Oakberry and benchmarking; **Matthieu** covered cultural and geographic research. **Samuel** set the expectation that students develop their own ideas, verify evidence, and ask him for guidance, and asked **Tiago** to challenge claims and request more information when needed. The group agreed to check source links and publishers. This clarified how to handle discussions with **Samuel** and how to build on Corsa's existing information through analysis, but the project's feasible scope and phase-one objectives remain open.

The framework and task split were not finalized. **Tiago** will create Drive folders for cultural, administrative, geographic, and economic research; **Ana** will continue her document today or tomorrow, and research materials are due in Drive by lunchtime on 9 October for review by Speaker 1 and **Joshua**. **Samuel**'s call with the Indonesia family office is tomorrow, 8 October. He expects the team's work in the middle or end of October and plans a group call with the Indonesia contact around 22 October, once the team is ready; the contact's identity cannot be shared. **Tiago** will discuss the approach with **Paul**, and the team will continue research before engaging the contact.

02 · RECAP

Main topics

Market Research Framework

15 min · **Samuel**, **Tiago** and **Matthieu**

Matthieu proposed using Hofstede's cultural-dimensions framework to connect Indonesian collectivism and the idea of a safe "third place" with Corsa's market entry. **Tiago** offered to send his CAGE slides, covering cultural, administrative, geographic, and economic dimensions. **Samuel** asked **Matthieu** to prioritize the cultural and geographic findings, including where community-building could work while generating enough sales for cash flow. **Samuel** also asked **Ana** to provide information that would support the framework and compare real-world concepts such as Oakberry and Spoleto.

Ana suggested investigating menu choices and customization, including sugar levels, toppings, vegan options, and gluten-free pasta, in light of local preferences and eating limitations. **Samuel** asked her to research creativity, brand representation, and how Oakberry built community, so **Tiago** could distinguish essential practices from possible differentiators. **Tiago** argued that community-building and emotional branding also depend on operational feasibility, including logistics, ingredients, handling raw materials, and contract negotiation.

Tiago proposed a selective PESTLE analysis to describe Indonesia's and Jakarta's context, while CAGE would assess what market differences mean for Corsa. He began outlining political, economic, and social considerations, including disposable income, willingness to pay for food, inflation, currency, wages, and rent, but the explanation was interrupted. **Samuel** said framework analysis could combine the discussion and help answer scope questions; **Matthieu** proposed PESTEL first and then CAGE, while **Tiago** noted that some analysis could be reused.

OUTCOME The group did not settle on a framework or final work split; **Matthieu** is to prioritize cultural and geographic research, and **Tiago** is to send his CAGE slides. (20:31, 25:15, 31:22)

Evidence and Brand Benchmarks

9 min · **Samuel**, **Tiago** and **Ana**

Samuel said he had not yet seen **Tiago**'s data and that **Ana**'s and **Matthieu**'s research still needed source verification. He argued that experiential-marketing work needs truthful, verified facts and studies, and asked **Tiago** to challenge the material and request more information where it was insufficient. **Matthieu** said he had checked the sources he sent, including studies about young people or Gen Z liking healthy food, but acknowledged that some claims remained abstract and could use more data. **Tiago** offered to help verify the evidence.

Ana explained that her Oakberry research so far covered the brand's story and growth, not its Asian markets, and that finding data was difficult because Oakberry publishes little. **Samuel** cautioned against looking only for evidence that confirms a preferred view, saying that a lack of findings could itself be informative. He began suggesting Renelo, with the spelling uncertain in the conversation, as another benchmark, and questioned whether it could be as accessible to franchisees as Oakberry, which he said could be opened with 50 thousand bucks.

Samuel showed a robotics-focused concept and raised questions about how attractive such locations are and whether they are franchised or built directly. **Ana** proposed benchmarking Brazilian chain Spoleto for its logistics and pasta-making approach, conditional on checking whether Jakarta customers would like and recognize the dish. **Matthieu** said the comparison could be interesting. **Samuel** described Spoleto's adaptation to Brazil, including a lot of sauce, cream, and cheese, and said al dente pasta is not familiar there.

OUTCOME The group agreed to verify sources, while Oakberry's Asian-market evidence and the use of Renelo or Spoleto as benchmarks remain to be investigated. (07:13, 12:00, 14:59)

Roles and Collaboration

7 min · **Tiago**, **Samuel** and **Matthieu**

Tiago opened by saying the meeting should align the group's work so members proceeded in coherent directions, and proposed sharing what each person had in mind. **Samuel** agreed that the students should develop their own ideas and said he could intervene with guidance if they had questions. **Matthieu** proposed focusing on the questions in part 6 of the scope and splitting them according to assigned roles, identifying his own work, **Ana**'s benchmarking, and **Tiago**'s experimental marketing.

Tiago described his intended contribution as research on Indonesian customer behavior, comparing what exists and works there and combining findings with **Matthieu**'s cultural research and financial analysis. **Matthieu** said **Tiago**'s work could support the group's claims. Later, **Ana** said she would continue working on the document and add missing material today or tomorrow; **Samuel** encouraged the group to identify gaps in existing information. **Tiago** said he would discuss the proposed approach with **Paul** and ask whether **Paul** wanted to join.

OUTCOME **Samuel** agreed to provide guidance, but the role split was not formally confirmed; **Ana** will continue the document work and **Tiago** will consult **Paul** about the approach and participation. (00:43, 02:55, 41:33)

Indonesia Contact and Timing

3 min · Samuel, Tiago and Ana

Tiago asked for comparable data and more information about the Indonesia contact, while Ana suggested comparing Oakberry's South Korea market entry and its use of a networking contact. Samuel said the contact was a family office working with Indonesia's biggest brands, had just received the business scope, and that he could not share its identity. He had a call with the family office tomorrow and said the group should focus on its current research rather than rush to engage the contact.

Samuel said the work would be wanted in the middle or end of October, once the group had finished its task. He expected to arrange a call between the group and the Indonesia contact around 22nd of October, once the group was ready. The exact timing remained uncertain, and Samuel did not address Ana's proposed comparison with Oakberry's South Korea entry.

OUTCOME Samuel will speak with the family office and arrange a group call around 22nd of October once the group is ready; the contact's identity remains undisclosed. (38:16, 39:19)

Also discussed

- Ana raised order customization as a possible Jakarta research focus, and Tiago offered relevant Statista data accessible through the university. (05:38, 06:24)
- Tiago will create Drive folders by CAGE dimension; Matthieu described his current sources, while the source-review plan remained unsettled. (32:15, 33:18)

03 · RECAP

Key points

- The team agreed to verify sources by following links and checking where information came from, including when using AI tools. (35:32, 36:35)
- Samuel said the work would be wanted in the middle or end of October and proposed a group call with the Indonesia contact around 22nd of October, once the team was ready. (38:16, 39:19)
- Samuel described the Indonesia contact as a family office that works with Indonesia's biggest brands, said it had received the business scope, and said he could not provide its identity. (38:16)
- Matthieu said his current cultural and geographic evidence included one or two surveys conducted by people at universities and academic papers, and that some claims still needed more data. (10:28, 33:18)
- Tiago committed to create a Drive folder for each of the cultural, administrative, geographic, and economic dimensions. (32:15)

04 · RECAP

Ideas discussed

Structure the analysis

Matthieu proposed researching with PESTEL first and then CAGE, while noting that one framework would already be useful. Samuel supported using a framework to combine the work, but the group did not finalize the framework or work split. (29:25, 31:22, 31:58)

Expand brand benchmarks

Ana proposed benchmarking Spoleto for its logistics and pasta-making approach, with Jakarta customer interest and brand recognition still to be checked. Samuel also suggested another possible brand benchmark, named as Renelo or Renello in the notes, but its spelling and suitability remained uncertain. (12:00, 14:59, 20:31)

Explore menu customization

Ana proposed investigating adjustable sugar and toppings, vegan options, and gluten-free pasta in response to local preferences and eating limitations. The research priority and extent of this work were left open. (22:30)

Research brand community

Samuel asked Ana to examine brand representation and how Oakberry built community using real-world examples, so the team could distinguish useful practices from potential differentiators. Ana's existing Oakberry research focused on its story and growth, and Asian-market evidence was still needed. (11:12, 23:38)

Prioritize cultural factors

Matthieu proposed using Hofstede's cultural-dimensions framework and the idea of a "third place" to explain how Indonesian collectivism might relate to Corsa. Samuel supported prioritizing cultural and geographic factors, including locations that could build community and generate enough sales for cash flow. (17:27, 20:31)

05 · RECAP

Decisions

01 The students will develop their own ideas, with Samuel providing guidance when they have questions or need it. (00:43, 01:31)

02 The group will verify sources by checking links and where the information came from. (35:32, 36:35)

06 · RECAP

Next actions

Tiago

TASK	DUE
Research Indonesian customer behavior, compare what exists and works there, and integrate the findings with the cultural and financial research. (03:49, 05:17)	No date
Finish the document containing his data and research. (07:00)	No date
Challenge the evidence in the research and ask Matthieu and Ana for additional information when needed. (09:49)	No date
Send the course slides about the CAGE framework. (18:44)	No date
Create a Drive folder for each dimension: cultural, administrative, geographic, and economic. (32:15)	No date
Discuss the approach with Paul and ask whether he wants to join. (41:33)	No date

Ana

TASK	DUE
Develop the Oakberry research on the Asian market and look for supporting data. (11:12)	No date
Research creativity, brand representation, and how Oakberry built community using real-world concepts for comparison. (23:38)	No date
Continue working on the document and add material if she finds gaps. (40:30, 41:09)	today or tomorrow

Matthieu

TASK	DUE
Organize the cultural and geographic research into a prioritized framework, including what matters most and where community-building and sales could work. (20:31)	No date

Samuel

TASK	DUE
Have a call with the Indonesia family office. (38:16)	tomorrow
Set up a call between the group and the Indonesia contact once the group is ready. (39:19)	around 22nd of October, once the group is ready

No owner

TASK	DUE
Verify sources by checking links and where the information came from. (35:32, 36:35)	No date

07 · RECAP

Open questions

- How much of Corsa's requested work is realistic within the capstone project's available time and capabilities, and what scope or workload trade-offs are needed? (29:25, 30:00)
- How should the group build on Corsa's existing research and demonstrate the value of its own work?
  Raised by **Samuel** (07:13, 12:00, 29:25)
- Which framework should the group use, and how should the work be split, including with **Paul**?
  Raised by **Samuel** (29:25, 31:22, 41:33)
- Can the team find reliable data on Oakberry's Asian markets or other relevant brands, and what can be concluded if little evidence is available?
  Raised by **Samuel** (11:12, 12:00)
- How sensitive are Jakarta and Indonesian customers to order customization, and would they like and recognize a pasta concept such as Spoleto?
  Raised by **Ana** (05:38, 14:59, 22:30)
- Which cultural and geographic factors matter most in Indonesia, and which locations could build community while generating enough sales for cash flow?
  Raised by **Samuel** (20:31)

08 · RECAP

Per person

Tiago

Tiago handled experimental marketing and contributed customer research, market-entry frameworks, source verification, and a proposed Drive structure.

POINTS MADE

- **Tiago** said the meeting should align the team's work and proposed that members share their plans for the task.
- He described his experimental marketing role as researching Indonesian customer behavior, comparing what exists and works, and connecting findings with cultural and financial research.
- He said Statista was available through the university, offered to share relevant data, and said he was finishing his research document.

- He offered to help check the data and asked whether the proposed approach to reviewing evidence worked for others.
- He offered to share course slides about CAGE and entering emerging markets.
- He argued that community and emotional branding depend partly on logistics, ingredients, raw-material handling, and contract negotiation.
- He explained that CAGE considers market differences relevant to Corsa, while PESTLE describes Indonesia's and Jakarta's broader operating context.
- He began identifying political risks and opportunities, family influence, disposable income, willingness to pay, inflation, currency, wages, and rent as PESTLE considerations.
- He said framework findings could help answer project-scope questions if connected with the team's other work.
- He agreed that some analysis could be reused across CAGE and PESTEL.
- He proposed organizing the Drive into folders for cultural, administrative, geographic, and economic dimensions.
- He noted that source bias can depend on who publishes the figures, using Indonesian government numbers as an example.
- He asked for comparable data and further information about the Indonesia contact.
- He agreed that sources should be verified and said he would discuss the approach with **Paul**, including whether **Paul** wanted to join.

TASKS

- Research Indonesian customer behavior, compare what exists and works there, and integrate the findings with the cultural and financial research.
- Finish the document containing his data and research.
- Challenge the evidence in the research and ask **Matthieu** and **Ana** for additional information when needed.
- Send the course slides about the CAGE framework.
- Create a Drive folder for each dimension: cultural, administrative, geographic, and economic.
- Discuss the approach with **Paul** and ask whether he wants to join.

Samuel

Samuel represented Corsa, pressed for verified evidence and prioritized research, and explained the timing and limits of access to an Indonesia contact.

POINTS MADE

- **Samuel** said the students should develop their own ideas and that he could provide guidance when they had questions.
- He said he had not yet seen **Tiago**'s data and that he needed to verify the sources behind the research.
- He argued that experiential marketing requires truthful, verified evidence and asked **Tiago** to challenge research and request more information when needed.
- He cautioned against seeking only confirming evidence, saying limited findings could indicate that little exists beyond what a brand already offers.
- He suggested Renelo as another possible benchmark and contrasted Oakberry's accessibility, saying a store could open with 50 thousand bucks.
- He questioned whether Renello could be franchised like Oakberry and asked about the appeal of robotics-focused locations.
- He asked **Matthieu** to prioritize cultural and geographic factors, including locations that could build community and generate enough sales for cash flow.
- He described Spoleto's Brazilian adaptation, including abundant sauce, cream, and cheese, and unfamiliarity with al dente pasta.
- He asked **Ana** to research brand creativity, representation, and Oakberry's community-building through real-world examples.
- He asked **Tiago** what PESTLE is in German.
- He supported using a framework to combine the discussion and address scope questions, and suggested dividing work with **Paul**.
- He asked **Matthieu** to add pictures, graphics, and other visual material to make the cultural and geographic research more tangible.
- He emphasized checking links and original publishers, saying AI use does not remove the need to verify information.
- He said the Indonesia contact was a family office working with Indonesia's biggest brands, had received the business scope, and could not be identified.
- He said he would speak with the family office tomorrow and arrange a group call around 22nd of October once the team was ready.
- He said the team should continue its current research and not rush to contact the family office.

TASKS

- Have a call with the Indonesia family office.
- Set up a call between the group and the Indonesia contact once the group is ready.

Ana

Ana contributed Oakberry and Spoleto benchmarking ideas, raised questions about customization and Asian-market evidence, and discussed continuing her research document.

POINTS MADE

- **Ana** raised customer order customization as a possible research priority based on her Oakberry research.
- She said her Oakberry research covered its story and growth, while Asian-market research and supporting data remained difficult to find.
- She asked **Samuel** what additional information he needed from the team.
- She proposed benchmarking Spoleto for logistics and pasta preparation, while checking whether Jakarta customers like the dish and recognize the brand.
- She suggested investigating adjustable sugar and toppings, vegan options, and gluten-free pasta in light of local preferences and eating limitations.
- She suggested comparing Oakberry's South Korea entry and its use of a networking contact.
- She said she would continue the document, look for gaps and further useful information, and add material today or tomorrow.

TASKS

- Develop the Oakberry research on the Asian market and look for supporting data.
- Research creativity, brand representation, and how Oakberry built community using real-world concepts for comparison.
- Continue working on the document and add material if she finds gaps.

Matthieu

Matthieu contributed cultural and geographic research, proposed role-based research organization, and discussed evidence sources and frameworks.

POINTS MADE

- **Matthieu** proposed focusing on part 6 of the scope and dividing its questions by role, identifying his cultural work, **Ana**'s benchmarking, and **Tiago**'s experimental marketing.
- He said **Tiago**'s customer-behavior research could support the team's claims.
- He said he had checked the sources he sent, some findings had supporting studies, and other claims were abstract and could use more data.
- He suggested Hofstede's cultural-dimensions framework and Indonesian collectivism, including the idea of a "third place," as relevant to Corsa.
- He said benchmarking Spoleto could be interesting.
- He proposed researching theory with PESTEL first and then CAGE, while noting that using one framework would already be useful.
- He said his current evidence included one or two surveys conducted by people at universities and academic papers.

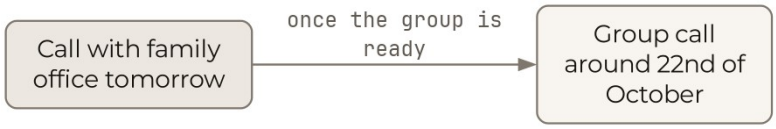

TASKS

- Organize the cultural and geographic research into a prioritized framework, including what matters most and where community-building and sales could work.

09 · RECAP

Diagrams

Indonesia contact calls

Samuel's call with the family office is planned before the group call with the Indonesia contact around 22nd of October.

Points to double-check

From an automatic check (gpt-6-luna). Some may be false alarms.

OVERVIEW Overview

The 9 October lunchtime deadline and review by Speaker 1 and **Joshua** are not stated in the transcript.

MAIN TOPICS Evidence and Brand Benchmarks, paragraph 1

Matthieu said he had checked his sources; the transcript does not support saying both his and **Ana**'s research still needed source verification.

Transcript

00:00 **Samuel** No, I can't, and I can't use Pocket right now.

00:03 **Tiago** All right, no, it's fine. I'm doing it on mine. All right. So

00:13 **Samuel** the purpose

00:15 **Tiago** of this meeting is just that we all go in, like, not the same direction, but in coherent directions, and that what one does, the rest is aligned with the rest, right? Yeah, so we act as if you're not here, right? Or

00:43 **Samuel** No, I mean, I'm here, but I will not... I will let you guys have and discuss and then come up with your own ideas. I mean, that's what this class should be about. And if you have a question or if you need some guidance, I of course can intervene.

00:59 **Tiago** All right. Okay. So I think the first step would just be also to say how each of us has, like, what I have in mind, what you have in mind, and what you had in mind regarding the task

01:19 **Matthieu** in terms of cooperation

01:21 **Tiago** yeah, and then we see how we can put that together and make it work. Yeah, okay. Or then, or say if something is bad.

01:31 **Samuel** I agree. Okay, good.

01:34 **Matthieu** If I can, I think that right now we should, as we discussed Monday and the other as well, focus on the questions that are asked in part 6 of the scope. And I think it's good if we just split those questions between us and between what role we've been assigned. Like, I know that

02:03 **Samuel** from the first audio on the phone, I think the audio is really bad. I don't know why, but maybe it's because of your room, but you're in it. It's acoustically not so

02:15 **Tiago** not that pleasant. Let me check if I can join the meeting on my laptop.

02:22 **Ana** Should we open the door?

02:23 **Tiago** We could open the door.

02:25 **Ana** So then it means

02:27 **Tiago** Yes, let me just turn here. Can you say something, **Samuel**?

02:41 **Samuel** Yes, test one, two, three. Okay, yeah. It works. It works.

02:46 **Tiago** All right. Thank you, guys. Great. So let's go then. You were talking. So

02:55 **Matthieu** Yeah, then I was saying some of the first questions here are mainly, like, for me, I think. But then there's all the benchmarking that's, **Ana**, for you. And then I don't remember what your role is, **Tiago**.

03:11 **Tiago** The role was supposed to be experimental marketing.

03:21 **Matthieu** Okay. Okay. Yeah. Experimental marketing. So it will correspond, like, if you look at the questions that we see in the

03:34 **Samuel** Yeah. And then the

03:37 **Matthieu** the scope

03:39 **Samuel** Mm-hmm.

03:40 **Matthieu** like, does it correspond to something, or does

03:45 **Samuel** that mean

03:46 **Matthieu** it is

03:49 **Tiago** As I understand it, it's page file. But yes, yeah. I mean, he had a fair point, actually. But how strong is the fit with human? And I was, yeah, how? What did you have in mind when you said the experiential marketing? Maybe because I had in mind just to have some behavioral analytics about customer behavior in Indonesia and to compare it to also what exists and what doesn't, and how, what works there, what doesn't, and then merge these findings with your cultural aspects and your research.

04:48 **Matthieu** Yeah, I think it's nice. Like, I remember now that we chose this work for you because you looked for a lot of data, like in the reviews and stuff on Google. Yeah. But I don't think it really corresponds to something specifically here, but maybe you can have some data that supports everything that we say.

05:10 **Tiago** Mm-hmm, yeah, and like...

05:12 **Matthieu** Bridge the, yeah, exactly, bridge and...

05:17 **Tiago** Also, like, with what unison and financial to see how to what extent it can go together. Yeah, actionable. I, that's how I had... I had this in mind, and, like, yeah, doing some research. Yeah, also...

05:38 **Ana** One thing that I faced and saw how important it is, and I think we have to start searching about it, is how sensitive Jakarta's and Indonesian people are to customizing your order, because now I feel like all the research I did about Oakberry is actually based on the different points that they have, like the opportunity for the customer to customize their own order. So maybe, if you're not looking for it, I can start searching about it, because now that's the data that I need to access, you know. So have you, like...

06:24 **Tiago** It? I had found some data, but this website is pretty good. It's called Statista, and with the uni you have access to it. I can share my screen if you want. I'm just trying to find the data. Here.

06:57 **Samuel** The only data I haven't seen yet is the one from **Tiago**.

07:00 **Tiago** Yeah, I'm finishing the document. I had just a group project yesterday, but it's almost done. It's, I think, gonna... All good. It's gonna be up. From.

07:13 **Samuel** From what I've seen from **Matthieu**, for example, what I liked about it, or what, how should I say, to pull it together? **Matthieu** had the open task, and you research based on facts. Whatever I read in your document is our frameworks and things that exist and work. Absolutely, **Matthieu**. So at least you have one source of evidence, right? Then when it comes to Oakberry from **Ana**, when I look through your stuff, it sounds true. I think it makes sense. I see the sources. I have to go through the sources. I don't know if you went through the sources to verify your research. But what I can read, hopefully, is more or less also correct and based on current circumstances that we have today, that we can verify from different sources. So maybe it's important to verify the benchmarks and the Oakberry summary, because with those 2 things, **Tiago** can have, on the one hand, proof

of work, credibility studies, and everything that makes sense more or less to be experiential. This is the mixture that I was thinking about having in the group, because experimental experiential marketing can only start if you have a marketing framework that works. And because we are not a company that already, for example, if we would have 3 locations, we would have our own proof. I could give you data, analytics. I could tell you, hey, this Pesta works, this community framework works. I can just tell you we had a community run with Whitaman well in January. We had over 100 people joining, which is quite a lot for Zurich, with a brand that only existed for 2 months. There are running clubs in Zurich; they didn't have 100 people in the first 3 years because they didn't have a brand in the background. So in order for Kyoko to be more experiential, I think it's really important that you deliver truthful facts and studies that are verified.

09:43 **Tiago** And I can also help verify the data. I don't mind the

09:49 **Samuel** Thing is, the thing is, you should challenge it. Yeah. Once you get it from them, you have to choose: can I work with that information to get back to **Matthieu** and **Ana** and tell them, like, guys, I need more information on this, I need more information on that, to not do their work but still be able to do your work?

10:15 **Matthieu** Yeah.

10:17 **Tiago** Okay. But should we? Okay. Does this work for you?

10:28 **Matthieu** Yeah, I think it's pretty clear. Like, for example, me, for my part, I did already some. I did check every source that I sent, and they're good, but it could be great to have some data on them. Some of them, I have already some data, like some studies that I found, for example, the fact that young people, or Gen Z, like healthy food or things like that. This is checked and it's good, but some others, as **Samuel** said, are quite abstract, so it would be great to have something more if we can find it.

11:12 **Ana** Yeah, and also there's something that I wanna add. The research that I did by now is more about the Oakberry story and how they got that big. But I know that I have to develop more about the Asian market that they are now in. So it's not ready because I have to look for some data about it. It's kind of hard, actually. Oakberry doesn't have a lot of data. That's why maybe Sam thought that it kind of needs more because they don't host everything, but yeah, there are some things that I know that I have to add. But it would also be great to hear from you what you need from us.

12:00 **Samuel** I think the approach from **Paul** that he showed last time in terms of culture could be worthy because, again, we don't have to... The problem is if we look out for evidence that we want to hear, we end up with a brand that is probably normal. So if you don't find a lot, that can be a good thing because then there's nothing more. Then there's just what they have is running and açai. Yeah. So, as you can see. So if you've been there, maybe you can go a step above and be like, "Okay, how can we become a more attractive franchise where you maybe end up already in some Physical AI things or robotics, or maybe, okay, I give you that hint. There is another concept out there that is insane, and I'm gonna give you the brand's name as well. So maybe you find something like that in Asia. And if you don't find anything reliable, you can use this brand as another bench. But again, I don't know if you find a lot of things about them. So the name is Renelo. Ren Renno? Renello? Yeah." They are fucking creative, fucking awesome, and crazy in what they do, and they

take pasta really seriously. Right here, you can see it, so they behave like to be detainer of food and have ambassadors like Vinicius. They are based in Madrid, Barcelona, and it's

14:00 **Tiago** full. I like it. Yeah, I like that it's a re, you know, with 2 eyes.

14:06 **Samuel** Here you have it. And you see robotics, so fully thin. There's you don't execution, you just get great food out of your spot, and then you can eat like food is served in the relleno. This is their packaging. Whoa

14:27 **Ana** Styling. Okay, I gotta look for it.

14:31 **Samuel** So this is what you find in a creative way. We are more than creative, but the question is maybe how attractive are locations like that? Are they a franchiser, or do they just build it by themselves? Because in the future, we want to be as attractive as Oakberry. That's actually really important because Oakberry is attractive because you can, I don't know, take 50 thousand bucks and open a store. I don't think that's possible with relano.

14:59 **Ana** Mm-hmm, but also there's one thing. Like, in the end of my document, I added one more possible company to the benchmark, not in the design or creativity way, but in the logistics and how the pasta is made. Maybe, I don't know if you know this one, it's Brazilian, but it's very common in airports, bus stations, shopping malls. Maybe we can, because they're kind of very similar to Oakberry when you put on toppings, but in that context of pasta. So maybe it would work if we test and see that actually Jakarta's population likes this kind of dish and this kind of recognition.

15:50 **Matthieu** It could be interesting.

15:53 **Samuel** Yeah, I have tried Spoleto myself. You have it? Can you hear me? Yeah. Yeah. **Tiago**, let me call you on the phone. It's really, the connection's not cool. Yeah.

16:18 **Tiago** We have to call twice. Oh, you just need to call twice, yeah. Sorry. All right.

16:29 **Samuel** Can you hear me now better? Can you hear me now better?

16:31 **Tiago** Yep.

16:35 **Samuel** All right.

16:38 **Tiago** Oh yeah, let's do it like that. Do you hear me? Yes. Yeah. Okay, it's gonna be a bit quiet. Oh, maybe let's just wait like this. Great. Perfect. Let's go. Did you want to add?

16:59 **Ana** Wait, we're not just, wait. One.

17:04 **Tiago** Say something again. What did you want to

17:09 **Samuel** say?

17:13 **Tiago** Yeah, that's weird, just here. Yeah. It's fine. All right. Say

17:18 **Ana** it again at the end, Jason.

17:21 **Tiago** Yeah. Can you say again?

17:24 **Samuel** What did you want to say, what you?

17:27 **Matthieu** I wanted to add that the thing that ties to the dimensions, the cultural dimensions that **Paul** showed the other day, could be a really good base for us, like something that we can add alongside the questions that we have in part 6, because from my side, I just saw that we spoke about individualism and collectivism and the fact that in Switzerland we are very individual people and in Indonesia we are very collective people.

And I found a lot of sources that explain that it's very important and that the Indonesian people, they call this a third place, which is just a place to hang out and to feel safe and to have a drink and just speak with friends and people. So, like, it could be a great example, especially here in of collectivism, which would support the case of **Paul**.

18:44 **Tiago** Yeah. About **Paul**'s framework at Hofstede's cultural-dimensions framework. It reminded me of a course that I took last semester. It was called Dealing with Uncertainty in Dynamic Markets. And the course basically covered the fact of entering emerging markets. So Indonesia, Brazil, China. And it basically included a lot of, not like a perfect recipe because that's impossible, but a list of criteria that need to be considered before entering a market. And I really like the teacher, by the way. But one of the frameworks that we saw was called the CAGE framework. And the reason this reminded me of **Paul** is because the cultural dimension is the first dimension. So basically, CAGE has 4 dimensions: cultural, administrative, geographic, and economic. And within each dimension, there is a list of points that should be considered before entering a market, right? I'm gonna send you the slides about this one because it's still useful and interesting to see if interesting.

20:31 **Samuel** I think something like this is great because in the end, **Matthieu** has geography and culture. They don't help you by saying, "Oh yeah, you need a great party to have community," right? So what is exactly the framework behind it, and how can we adapt it to course learning from maybe brands like Oakberry, but we don't have to. So, I mean, you did some research now, **Matthieu**, but I think if you can pull that into a framework, into again an order from top to bottom, like what thing is most important culturally in Indonesia, what thing is most important geographically because we have different availabilities in several locations, but maybe you can tell us this is the number one location to build community first and also have enough sales to generate cash flow. I think then you really hit your part on the spot, and in order to do that, you need information from **Ana**. And **Ana**, I know Spoleto. I hated everything about Spoleto, but it works perfectly for Brazil. So I love Spoleto. It's so gross for an Italian to be there. But it's, you know what they did? What they did perfectly is adapting to the Brazilian market: a lot of sauce, a lot of cream, a lot of cheese. Al dente is not a word that they know. So it's perfect. I made carbonara for my uncle and he was like, "What the fuck?" And then he took some tomato sauce from the fucking fridge and put the ketchup in and stuff, and he made it a big fucking subject. Yeah.

22:30 **Ana** Yeah. Yeah. But also, like, I was thinking of, we know that, like, because of some cultural differences, they have some eating limitations in Indonesia. Maybe this would, like, work as an option because I was looking for Oakberry data and this kind of stuff. There are some places, there's some places that the menu is basically the same everywhere, but they adapt, for example, level of sugar or the toppings. Maybe, like, I was thinking of exploring more about the possibility of doing in your way, if you like a lot of sauce, if you like a lot of cheese, or if you, for example, don't eat milk and then you want, like, a vegan, maybe, like, we could add it, add this kind of adaptation to the order in that is polite away, you know. Like, be with your way in now in, like, in the topic that you can choose your limitations, or, for example, I want a gluten-free pasta, and then I can choose the combination, the best combination for me, my pasta. Right. Like being able to choose it.

23:38 **Samuel** I think for you to have a proper to find yourself also in this task, I think it would be nice to do the research in terms of creativity and how to represent a brand correctly. And this is Renello for me. Renello is insanely dumb in terms of design to provide also some design features that are nice to have to **Tiago**. And also the other thing is, yeah, more to compare it with Oakberry again is maybe how he really built this community, because if you do that research based on real concepts and not you does the research based on, I would say, more how do you say that, strategically, like more in general? Then you can compare. Then you can really compare the real world and what research puts out, and then **Tiago** can really become experiential with those things and be like, hey, look, those 5 things we can't miss, those are normal, running clubs, blah, we have to do it anyway. And then on top, this location would be interesting because nobody's next to the racing track, or this could be interesting because nobody did it before. Or in terms of AI, we can implement this and that. I think then we really have thought about as much as possible.

25:15 **Tiago** So I think I mostly agree. I just think that in addition to what you said, we need also to analyze some more formal aspects as well, because this last part, well, with the running clubs and what people do, that's a lot about the person in itself, right? The brand, the emotional aspect of Corsa, which is one of the most important aspects according to me. But it only works if also the things behind are in place, meaning if we also, from the beginning, think about logistics, about ingredients, about how to handle with people that are gonna the raw material, how to negotiate the contracts. The thing, the way it's done here is a lot different from there. And having this in mind, it also allows us to describe to what extent it is possible to create this emotional aspect of the brand, how we can even advertise it once you're there, how to advertise it. Absolutely. So if you just allow me, just an idea. If we work all together, we could start a PESTLE, you know, PESTLE. We don't need to go to do the complete PESTLE because it might not be relevant. But political PESTLE, are you aware of PESTLE? So it's if you compare it with the CAGE, I just asked ChatGPT the other day to compare CAGE and PESTEL because I wasn't sure anymore. But

27:42 **Samuel** What is it in German?

27:45 **Tiago** It's a political, economic, social, technological, environmental, and legal context, basically. But based on what does Indonesia and Jakarta look like? CAGE answers what do those differences mean for Corsa? PESTEL is how is it there? The CAGE is the first one I mentioned. It's how do this affect core stuff? In this context, PESTEL is just like, it's P-E-S-T-E-L. But first you need to understand the politics there. You said that it's very family-based, right? Some families have a lot of power, and if you were close to them, you are more able to get what you want. But I think we also need to go a bit deeper, but, like, slightly deeper, just to first check it and also to see if there are other risks or opportunities regarding politics. Then it's the economic point of view. It's like to what extent you can grow, but also, like, the customers' disposable income, how much are they willing to pay for food? Inflation, currency, wages, and rent. For the social aspects, it's

29:17 **Matthieu** I have to, as I said, I have something, I have the other meeting at five. But, like, that's why if we

29:25 **Samuel** can just, we can just, like, I think this framework analysis is great because it really combines just what we just, like, what we have talked about. So maybe you guys can find a solution with **Paul** in the group to split it. Because you're first of all gonna answer the

questions of the scope. And second of all, I think you have a framework here that **Dr. Bergmann** will really like.

30:00 **Tiago** The guy who gives this class is a guy who had, like, I think now, like, 3 or 4 different businesses that all he, like, worked well. He expanded to Asia a lot, to India also, and I think he was in Australia and Malaysia as well. The guy knows his, knows it. I mean, at least what he says, right? But I think we can answer the questions of the project scope by also adding a few things from this because it would give a full answer, but then we would also need to link with the others.

30:56 **Samuel** **Matthieu**, if you can also implement more pictures from graphics, state of mind, or, like, more visual stuff, because, like, culture and geography has to be felt, and I think we can feel it more the more graphics we have. That's all I'm gonna say.

31:17 **Tiago** Yeah. I'm gonna send you the slides just to if you wanna

31:22 **Matthieu** Yeah, I have them from last year. You take the class? You took the class? No, but I had the presentation of best, so I think it's good. But what I think is good is if we try to take the theory that we have now, maybe do a bit more research, and then try to put them into a framework. Maybe PESTEL and CAGE, but already one would be great. So we can say that we've tried to focus before on PESTEL since we understand how it is there. And then we can have a meeting or a check-up here, and then we move to the CAGE one.

31:58 **Tiago** I mean, CAGE, the analysis is not different for CAGE and PESTEL. You can reuse some of the things.

32:05 **Matthieu** That's what I'm saying, but then we have to do before the test arrived.

32:15 **Tiago** Yeah. And the last thing that I wanted to share also about this is, in the drive, I'm gonna create one folder per dimension. Okay. So cultural, administrative, geographic, and economic. So we can organize the information where we find it. Great. Great. And last thing, dynatic is when you get data, do you also check for bias or not? Yes. Bias is like who published the numbers. You can do

33:04 **Matthieu** the website, basically. Okay. And like the

33:07 **Tiago** depending on the source, sometimes it's relevant to see who published because, like, the Indonesian government can publish numbers that favor them, right? Yeah, of course.

33:18 **Matthieu** No, for now I just have, like, one, so one or two surveys that come from people that did surveys in, like, university. Okay. So it's mainly papers like we do, so basically it should be great. So

33:35 **Tiago** Thank you. Last here, I just wanted to check

33:44 **Ana** The open door, the door open. See a

33:49 **Tiago** Pipe. I just want to check if the current enter answered me. No answer from the, do you hear me?

34:11 **Samuel** I, you hear me? Yeah, yes. Okay.

34:16 **Tiago** Yeah, cause because we don't hear, it's kinda bad. I close, I have to

34:22 **Samuel** do calls from this room again. I really think the connection in this room is

34:26 **Tiago** shit. It's awful. It's awful.

34:29 **Samuel** Oh, good. All good.

34:31 **Tiago** Should we try again with the, let's just end it like this.

34:44 **Samuel** Oh, Zoom. Okay. I mean, you have a further question?

34:57 **Tiago** Excuse

35:00 **Samuel** me.

35:03 **Tiago** Not really. The rest was just, I wanted also to help **Ana** to set up the HSG AI tools and show her a few things and, yeah, discuss some potential sources, but I don't think, like, I think we discussed the most important things with you. Yeah.

35:32 **Samuel** I think what you guys just realized and what you came up with is awesome. And in the end, you have several sources of information, and nowadays working with AI and ChatGPT and blah must be nice, but we cannot get over the verification process. We do have to still verify our sources and stand behind the vision, or at least behind what we say. And in order to do that, we need a framework that works for all of you, and to split also the tasks. And I think if you all split it in the right way, based on your needs and what you are good at, you're gonna end up with a great summary. And please verify your sources. At least click once, check the link. Where did you get the information from?

36:35 **Tiago** The great, okay? We will do that. And one exception, I think that's it. If you have next question.

36:49 **Ana** Experience.

36:51 **Samuel** In terms of timing, do you have any, like, is there anything you need to fulfill this way of summarizing?

37:04 **Tiago** If they, if we prefer, if we need something to fulfill this way of summarizing according to the transcript. Not really, apart from if you have some data that you gathered that could be interesting to compare. Otherwise, a bit more information on that contact in Indonesia that you mentioned once, yeah, who are they and how can they help, maybe.

37:48 **Ana** It would also be great for me to have this information because I just saw today that when Oakberry went to Korea, they also went through our networking contact and this kind of stuff, so maybe it would be good to compare and maybe think about doing the same as they did to enter the South Korea market.

38:16 **Samuel** Yeah. Yeah, I mean, the contact that we have, I cannot give you, but I can tell you it's a family office that works together with the biggest brands in Indonesia. Okay. And we have the business scope. They just received the business scope. I have a call with them tomorrow. Okay. I think in the middle or end of October, once you've finished your task, they really want to see that. And once it's all together. So, no, there's no need to stress right now. It's more important to focus on the path that we're on because if we do our job correctly today, people in South Korea, Hong Kong, wherever, will join us on this journey for sure.

38:58 **Tiago** Yes. But how, like, at the moment, without knowing who they are, to what extent do they like us?

39:11 **Samuel** I mean, they like

39:13 **Tiago** me. Which is already 50 percent of the job, right?

39:19 **Samuel** Exactly. And I would like to put you in contact with them once we are ready. Of course. Of course. But answering questions like which cultural aspect. If we know Jakarta, you have to understand Jakarta, you have to understand what works, you have to understand the culture. Once you're there at this top, like 22nd of October, I will set up a call between you and them, but then you speak on the same level. Then you know each other. Like, you don't have to explain things. You could just talk about, okay, having an interview, having a collaboration with a school, looking at certain locations specifically. Those are questions we want to answer. We want to answer today, and right now we have to answer the past and compare and do research. Mm-hmm.

40:08 **Tiago** Perfect. Great. So, thank you very much for this. I think it helps things a lot.

40:19 **Samuel** Of course. And thank you very much as well. I still have to say what you guys spoke. No, just say

40:30 **Ana** I just want to say, like, I'm gonna continue working on it, so if you have, like, feedback or so, if you feel like something is missing, like, I can add it today or tomorrow or something like that because I know there are some things that I have to develop more buttons.

40:47 **Tiago** I think it looks great. The document looks great.

40:51 **Samuel** Yeah, but I gave you my feedback. I gave you my feedback. I hope **Tiago** has recorded it. Yes. The feedback I gave you today, guys, is really important. What I gave you in certain moments was really what I just knew was the right thing to do. So it's all about optimization at this point. Okay. But

41:09 **Ana** Also, if you remember something important, maybe like this, like, really, no, I'm gonna search more about it and put it in this same document.

41:21 **Samuel** Yeah, maybe you find a gap. Maybe you find something Old Query doesn't have. Yeah, then you know you're at the right point.

41:33 **Tiago** Yeah, just brainwork. Yeah, I'm gonna talk with **Paul** and tell him that if we take the best link approach, what he thinks about it and if he wants to come in.

41:53 **Samuel** He has to give you a better thing than pastel if he doesn't want to do pastel.

41:58 **Tiago** Okay, great. All right. Okay. So

42:02 **Samuel** Great ideas, guys. Thank you very much. Thanks. Ciao, ciao.
