Recap

01 · RECAP

Overview

The 1 October kickoff focused on turning Corsa's proposal into research and deliverables, assigning responsibilities, and coordinating Team A's research with Team B's analysis and financial model. **Samuel** led discussion of Corsa's prior work, Jakarta business-case needs, operations and strategic direction; **Ana** raised how separately researched work would be integrated, while **Paul** and **Marius** discussed model inputs and outputs. The roles were set as **Jonas** for data analysis (Team B), **Paul** as strategic advisor across both teams, **Ana** for research and benchmarking (Team A), **Matthieu** for culture and geography (Team A), **Marius** for financial modelling (Team B), and **Tiago** for experiential marketing (Team A).

The group agreed to use separate Team A and Team B WhatsApp groups alongside the general group, and **Samuel** agreed to provide a shared Google Drive. First findings, a draft financial model, roadmap and evidence gaps are due 9 Oct; the full Jakarta business package and interim presentation are due 22 Oct, with the presentation scheduled 08:00–12:00 and lasting 12–15 min. The next meeting is next Monday, 5 October; no time or place was stated. The immediate priority is to establish whether the group can deliver the current scope, rather than decide on franchising. Feasibility, workload, research integration and how the group will build on Corsa's existing research remain open; the proposed work period ending on the 12th or 14th is also unresolved. The question to ask Zurich partners about proposed hours was not addressed.

02 · RECAP

Main topics

Team Roles and Coordination

27 min · **Samuel**, **Tiago** and **Ana**

The group worked through roles and titles based on members' different strengths. **Samuel** discussed **Marius**'s financial work, **Ana**'s research and benchmarking, and **Tiago**'s marketing and market-analysis experience; **Matthieu** described a connecting role between finance and strategic fit, while **Paul** suggested "strategic advisor." **Tiago** argued that **Jonas**'s realism and ability to keep work focused could be underused in a data-analyst-only role, and **Samuel** suggested **Jonas** provide **Paul** with an initial plan to challenge. The assignments and titles were still being worked through during the meeting.

Ana proposed dividing research by focus, with her concentrating on benchmarking and other work covering qualitative, cultural and geographical angles. **Samuel** supported differentiated ownership, asking people to validate their own work, share it with the team and seek help from colleagues whose skills fit the task. **Speaker 1** had earlier raised how Team A's cultural and segment findings could inform Team B's economic location choice without creating conflicting conclusions or excessive exchanges. **Ana** later said that task division had not made it clear what others were researching or how the work would fit together.

OUTCOME The WhatsApp structure and shared Drive approach were agreed, and **Samuel**'s recap listed the role allocation, but the detailed cross-team coordination and integration process remained open. `(11:10, 30:58, 1:29:20)`

Financial Model and Margins

24 min · **Samuel**, **Marius** and **Paul**

Marius said he would need suitable software and baseline research for the financial work, and suggested using a comparable business case because he did not yet have baseline figures such as an expected margin. **Tiago** emphasized checking numbers for reliability. **Samuel** identified the Jakarta business-case outputs as funding needs, CAPEX, OPEX, revenue forecast, scenarios and sensitivity analysis. The group discussed the inputs and outputs, but did not settle a detailed workflow or identify who would provide the comparable baseline.

The discussion of restaurant economics exposed unresolved assumptions. **Marius** estimated restaurant margins in Zurich at 2–3% and said rent and employees together might be 95% of costs, while **Samuel** estimated those costs could be 50% or 60%; the figures were not reconciled. **Samuel** asked the group to determine the highest possible margin within the next 3 weeks and develop its own answer rather than rely too heavily on comparisons or simply fill in a spreadsheet. He said Corsa would provide templates and structure, with deliverables to be reviewed and potentially divided after the one week of finding and defining.

Paul said the model should connect Group A's findings with the Finnish market and be useful for presentation visuals. **Marius** proposed a standard business-case dashboard based on explicit assumptions, and **Paul** suggested including cash flow, CAPEX and OPEX, revenue and pricing assumptions, and cost control, with an illustrative price adjusted using willingness-to-pay research. **Samuel** said the main location should be modelled from at least 40 square meters, including kitchen and delivery access, and corrected the staffing recollection to 1 cook and 1 barista, with the barista also handling the cashier. He said the model should be conservative and explainable without claiming false precision, and usable for a possible investor.

OUTCOME **Marius** was assigned the business-case dashboard and financial model, but the margin target, cost breakdown, baseline data and detailed model assumptions remained unresolved. (21:24, 48:39, 1:16:02)

Market Strategy and Franchise Direction

16 min · **Samuel**, **Tiago** and **Ana**

Tiago asked whether **Samuel** had documented market research, and **Samuel** said he had researched in his own way and had a Corsa GPT with highlighted chats and material he could provide. **Tiago** said the group could build on and challenge that work, while **Ana** asked whether the team was seeking new findings or merely reproducing **Samuel**'s results. **Tiago** also asked what **Samuel** ideally wanted Corsa to become in Indonesia in 2 years, including whether it would operate only there or elsewhere and whether it would be a pop-up or a long-term restaurant; that question was not answered in this part.

Samuel argued that franchising was necessary for Corsa to scale, referring to a 100 million valuation requiring 340 locations across Asia and separately to roughly 350 franchise models globally; the assumptions were questioned and not validated. **Tiago** argued that a system could work without being a franchise and that rapid high-scale development would be difficult. He asked whether the immediate goal was an Indonesia restaurant followed by franchising, and whether the first shop should impress prospective customers and Asian businesspeople who might replicate it. **Samuel** said it was too early to focus on franchising and the group should follow the current scope. For Group A's research, **Samuel** asked the team to assess strategic and cultural fit, cited Oakberry as a benchmark, and suggested comparing Indonesia or the Philippines with Singapore and Dubai rather than copying other companies.

OUTCOME The group did not settle Corsa's future direction or franchise sequence; **Samuel** asked the team to focus on the current scope, while the research question of how to build on existing work and assess strategic and cultural fit remained open. (41:43, 44:30, 1:10:18)

Scope and Deadline Feasibility

7 min · **Samuel**, **Speaker 1** and **Tiago**

Samuel said the longer internal scope document had more questions and inputs than the version prepared for HSG, and the group indicated it could use the longer version. He explained that Corsa's responsibility included guiding and teaching the students, sharing knowledge and helping them stay focused while earning a good grade and credits. **Speaker 1** relayed ICO's concern that completing everything by 22 October was ambitious and asked whether Corsa needed the deliverables by then, given an investor discussion two days later. **Samuel** proposed working until the 12th or 14th, reviewing evidence gaps together and then using at least another week to prepare the presentation; the applicable date and workload feasibility remained unresolved. **Tiago** asked which objectives mattered most if work had to be reduced, while **Samuel** rejected treating cuts as the expected plan.

OUTCOME The group did not resolve the work deadline, workload feasibility or priority trade-offs; **Samuel** maintained that the requested work was foundational and should not be approached on the assumption that tasks would be cut. (1:02:41, 1:33:05, 1:37:51)

Also discussed

- **Tiago** proposed a Jakarta MotoGP brand activation linking Corsa's colours to the Indonesian and Monaco flags; it was welcomed but not settled. (01:29, 02:23)
- **Speaker 1** shared motorsport marketing examples from Zurich and Basel, and **Samuel** encouraged the group to photograph relevant examples. (04:08, 05:58)
- **Tiago** advocated human-made marketing for authenticity and a premium feel, and **Samuel** agreed that showing the real product builds trust. (06:40, 09:09)
- **Samuel** recounted the pop-up's rushed launch and spending, including a 3K payment to a Michelin chef and an estimated 21K invested with return on investment in 3 months. (35:19, 37:09, 38:57)
- **Samuel** described prior pop-up information **Joshua** could provide, including revenue and costs for the Bahnhof Schloss location, and a 400-square-foot plan that failed over ventilation. (1:04:58, 1:05:46)
- **Samuel** proposed a modular pasta menu with six bases, sauces, "mantecatura," voice ordering and personalization; no menu design was agreed. (1:06:36, 1:08:00)
- **Samuel** shared operational lessons on menu prices of 15 to 18 bucks, space, rent and staffing, and said brand materials were available on Instagram and CICD. (1:08:47, 1:09:36)
- **Tiago** offered potential robotics contacts, and **Samuel** advised organizing the work and building trust before approaching them. (1:25:54, 1:26:37)

03 · RECAP

Key points

- **Samuel** identified the Jakarta business-case outputs as funding needs, CAPEX, OPEX, revenue forecast, scenarios and sensitivity analysis, while **Marius** planned a business-case dashboard using explicit assumptions. (26:09, 1:16:02)
- **Samuel** asked the group to identify the highest possible margin within the next 3 weeks; no margin figure was established, and the rent and employee cost estimates discussed were not reconciled. (48:39, 48:52, 51:09)
- **Samuel** said the immediate task was to establish whether the group could follow the current scope, not to focus on franchising; the feasibility of the workload and how to add to Corsa's existing research were left unresolved. (43:09, 58:38, 1:00:08)

04 · RECAP

Ideas discussed

Jakarta MotoGP activation

Tiago proposed connecting Corsa's red-and-white branding and the resemblance between the Indonesian and Monaco flags to a Jakarta MotoGP brand-awareness activity. **Samuel** responded positively, but no activation was agreed. (01:29, 02:23, 02:55)

Keep marketing human-made

Tiago proposed retaining human-made marketing for authenticity and a premium feel, even if it costs more. **Samuel** agreed with the emphasis on authenticity and showing the real product. (07:58, 09:09)

Franchise and automation

Samuel presented franchising as a way to scale Corsa toward future robotics and Physical AI, while **Tiago** argued that a system could serve customers without being a franchise and cautioned that rapid scaling would be difficult. The group did not settle the future model. (44:30, 45:17, 46:02)

Modular pasta menu

Samuel described a possible menu combining six pasta bases with sauces, with a robot carrying out "mantecatura," and also suggested voice ordering and personalized choices. The menu concept was not confirmed as an adopted plan. (1:06:36, 1:07:16, 1:08:00)

Shared Team A proposal

Ana proposed a common proposal structure where each Team A member could place their research, to reduce duplication and start shaping the midterm presentation. **Samuel** left the structure to the team, and no final structure was recorded. (1:31:59, 1:32:40)

05 · RECAP

Decisions

01 Use a WhatsApp community structure with separate Team A and Team B groups alongside the existing general group. (41:03, 41:34)

02 The staffing figure is 1 cook and 1 barista, with the barista also handling the cashier. (1:21:52, 1:22:03)

03 **Samuel** will provide a Google Drive workspace for project materials. (1:29:20)

04 Meet again next Monday, 5 October 2026. No time or place was stated. (1:28:13)

05 **Paul** is assigned as strategic advisor across both teams.

06 **Ana** is assigned research and benchmarking for Team A.

07 **Matthieu** is assigned culture and geography for Team A.

08 **Marius** is assigned financial modelling for Team B.

09 The group can use the longer internal scope document rather than the HSG version. (1:02:41)

06 · RECAP

Next actions

Tiago

TASK	DUE
Create a WhatsApp community with separate Team A, Team B and general groups. (41:03, 41:34)	No date

Samuel

TASK	DUE
Share relevant Corsa GPT chats and research material with **Tiago** and the team. (41:58)	No date
Provide the Jakarta concept. (1:09:36)	No date
Provide the investor and expansion assumptions. (1:09:36, 1:10:18)	in the next 2 weeks
Provide the group with a Google Drive workspace. (1:29:20, 1:32:40)	today

Ana

TASK	DUE
Gather research and benchmarking information for Team A. (26:58, 27:39)	No date
Propose a shared structure for Team A's proposal and research contributions. (1:31:59)	No date

Matthieu

TASK	DUE
Research culture and geography for Team A.	No date

Marius

TASK	DUE
Build the financial model and business-case dashboard using assumptions and inputs from the group. (1:16:02)	No date

Paul

TASK	DUE
Provide strategic advice across both teams. (31:45)	No date

No owner

TASK	DUE
Take pictures of relevant brand activity seen on the street. (05:58)	No date
Write the team members' names and job titles on the Kanban board. (13:08)	No date
Determine the highest possible margin. (51:09)	in the next 3 weeks
Review the deliverables and potentially divide them. (52:59)	after that one week of finding and defining
Read number 5 in the scope material. (1:02:41, 1:03:25)	No date
Answer the strategic-fit and cultural-fit questions and simplify the research to identify what is relevant. (1:10:18, 1:11:27)	No date
Conduct data analysis for Team B. (1:28:13)	No date
Share Team A research and inputs with the financial model so the findings can be connected. (1:14:53, 1:28:13)	No date
Write down topic allocations and make sure everyone has a topic. (1:27:31)	No date
Work on the project and share documents in the Drive before reviewing the work and evidence gaps together. (1:35:02, 1:35:53)	No date
Align regularly to check progress against deadlines and expectations. (1:36:22)	No date

07 · RECAP

Open questions

- How much of Corsa's requested work, including work packages 1, 2 and 3 and the additional work packages, is realistic within the capstone project's available time and capabilities, and what resource plan and trade-offs should the group use? (1:33:05, 1:33:42, 1:35:02)
- What is the group's purpose if Corsa has already collected much of the relevant information, and how should the group build on that work rather than reproduce it?
  Raised by **Ana** (41:43, 43:09)
- How should Team A's cultural and segment research be integrated with Team B's economic location choice and financial modelling so the teams avoid working in silos?
  Raised by **Speaker 1** (11:10, 11:28, 1:00:32)
- Is franchising Corsa's next goal, or should the group focus on the current scope, and what is the intended two-year direction for Corsa in Indonesia?
  Raised by **Tiago** (43:39, 54:55, 58:11, 1:00:08)
- What baseline business case, margin, pricing, cost and location assumptions should the financial model use, and can the group obtain the relevant floor plan and location details?
  Raised by **Marius** (24:46, 49:39, 1:17:55, 1:19:22)
- Is the workload deliverable by 22 October, does Corsa require its deliverables by then, and is the work-and-document stage meant to run until the 12th or the 14th?
  Raised by **Speaker 1** (1:33:05, 1:33:42, 1:35:02, 1:35:53)

08 · RECAP

Per person

Samuel

Samuel represented Corsa, explained its business context and expectations, and guided discussion of roles, project scope, research, and the financial model.

POINTS MADE

- He described robotics and Physical AI as possible future capabilities, while saying the group was not in a hurry to build around current robots.
- He responded positively to the MotoGP and flag-based marketing idea, mentioned possible future Formula One in Indonesia, and shared a Monaco Grand Prix coffee pit stop example.
- He encouraged the group to photograph relevant brand activity they encounter in public.
- He said authenticity and showing the real product build trust, and that how a product reaches people matters alongside the product itself.
- He said employee mood affects customer service and described Physical AI as a possible, though distant, way to reduce service inconsistency.

- He said members have different strengths, referred to a persona test, and argued for distinct job titles rather than duplicate roles.
- He discussed possible assignments and titles, including **Marius**'s financial role, **Ana**'s research role, and **Jonas**'s possible coordinator role.
- He identified Jakarta business-case outputs as funding needs, CAPEX, OPEX, revenue forecast, scenarios, and sensitivity analysis.
- He suggested that **Jonas** give **Paul** an initial plan for **Paul** to challenge using his experience.
- He said team members should validate their work, share it with the team, and seek colleagues' help when work falls outside their skills.
- He said the pop-up had two weeks from contract confirmation until opening, and that initially nothing existed, not even the name Corsa.
- He said he paid the Michelin chef 3K and cancelled something else he wanted to do to fund it.
- He recalled spending about 600 dollars on a new sign after about one week, or 300 dollars at a special price, but was uncertain.
- He thought the pop-up ended with 21K in invested money and had return on investment in those three months.
- He said three days without anyone writing in the WhatsApp group would indicate something was wrong.
- He said he had done market research in his own way and had a Corsa GPT with highlighted chats and material.
- He said a 100 million valuation would require 340 locations across Asia, and separately referred to around 350 franchise models globally.
- He argued that franchising was necessary to scale Corsa, and described robotics and Physical AI as part of its longer-term ambition.
- He proposed that reducing costs by 50% through automation could allow good-quality food to be offered 50% cheaper.
- He said McDonald's has 36,000 locations and described almost all of them as franchises owned by different owners.
- He said Zurich rent and employee costs together could be 50% or 60%, and asked the group to identify the highest possible margin.
- He said Corsa's scope included deliverables, suggested reviewing and possibly dividing them after a week of finding and defining, and said templates would be provided.
- He anticipated meeting again in three to four weeks to review the group's data, comparisons, calculator, and numbers.
- He said the immediate need was to establish whether the group could follow the current scope, rather than focus on franchising.
- He said the team needed time to learn to work together and that members should not expect everyone to work at the same pace.
- He said Corsa should guide the students, provide knowledge and learning support, and help them maintain focus while earning a good grade and credits.
- He said the planned 400-square-foot Corsa after the pop-up did not work out because the location lacked good ventilation.
- He said the Corsa Latte, a flat white with hibiscus infusion, had performed really well.

- He described a possible menu with six bases and sauces, combined by a robot through “mantecatura,” plus voice ordering and personalized choices.
- He said Corsa had been the cheapest in HP, with menus priced at 15 to 18 bucks, and that large shareable portions worked but were not best.
- He said space was critical: less space could mean lower rent and fewer employees, while greater automation in the back system was preferable.
- He said brand identity and visual material were available on Instagram and CICD.
- He said strategic and cultural fit were questions for Group A, and urged the group to simplify research and determine what was relevant.
- He cited Van Gulis of Oakberry as a benchmark, saying he had 3,000 locations worldwide, wanted 5,000, and was doing 360 million this year.
- He said the group should learn from other organizations’ failures and successes rather than copy them, and investigate why businesses succeed.
- He identified Indonesia or the Philippines as markets where Corsa’s product and racing concept could be exotic, with comparisons to Singapore and Dubai.
- He said the main location should be modelled from at least 40 square meters, accounting for kitchen space and delivery-truck access.
- He said revenue estimates need not be precise to 10 bucks but should be as accurate as possible and conservative, without false precision.
- He corrected staffing to 1 cook and 1 barista, with the barista also handling cashier duties because there was no screen.
- He said the project needed a revenue model for a possible investor soon, distinguishing work to build something today from second-phase work for tomorrow.
- He advised against approaching **Tiago**’s robotics contacts before the team had its work sorted and established trust.
- He said **Jonas**’s data analysis and **Marius**’s financial modelling might need research supplied by others.
- He agreed to a Google Drive workspace and explained viewer, commenter, and editor permissions, including collaborative editing in the same file.
- He left Team A’s preferred proposal structure to the team.
- He said work would move quickly after research and documents were assembled, proposing a work period until the 12th or 14th and a joint evidence-gap review.
- He said the requested work was important and foundational, rejecting the idea of treating cuts as the expected plan.

TASKS

- Share relevant Corsa GPT chats and research material with **Tiago** and the team.
- Provide the Jakarta concept.
- Provide the investor and expansion assumptions.
- Provide the group with a Google Drive workspace.

Tiago

Tiago contributed marketing and research perspectives, questioned Corsa's strategic direction, and raised coordination and prioritization issues.

POINTS MADE

- He proposed connecting Corsa's red-and-white branding with the Indonesian flag, Jakarta MotoGP, and possible brand awareness, noting its resemblance to Monaco's flag.
- He said people may prefer human-made marketing even when they cannot distinguish it from AI-made visuals, and recommended keeping Corsa's approach for a premium segment.
- He described prior experience as head of marketing at a large club in Shanghai, including market analysis, and suggested "data researcher" as a possible role.
- He said reliable numbers need to be checked before they are used.
- He argued **Jonas**'s realism and ability to focus work could be wasted in a data-analyst-only role, describing him as a great manager.
- He raised the need to distinguish research focuses and proposed separate WhatsApp groups for the teams alongside the general group.
- He asked about **Samuel**'s existing research and about **Samuel**'s desired two-year vision for Corsa in Indonesia.
- He argued that a system can serve everyone without being a franchise, although rapid scaling to a high level would be difficult.
- He asked whether the immediate goal was an Indonesia restaurant followed by franchising, saying the answer changed his understanding of the project.
- He argued that if franchising were next, research should attract prospective operators, and Corsa's first Indonesian shop should impress customers and operators.
- He asked whether becoming a franchise was Corsa's next goal because it would change his research approach, while wanting guidance and keeping options open.
- He clarified that he did not intend to be disrespectful.
- He said he had potential robotics contacts through a cousin at a custom-robot company serving PMI and his father, who manages robotics at Philip Morris.
- He said project files could be uploaded to Google Drive.
- He asked the group to identify Corsa's most important objectives in case work had to be reduced, while clarifying that cutting work was not the goal.

TASKS

- Create a WhatsApp community with separate Team A, Team B and general groups.

Paul

Paul offered strategic-advisor perspectives on roles, market entry, franchise structures, and the financial model's contents and presentation.

POINTS MADE

- He suggested "strategic advisor" as a possible title for his role.
- He said a CFO and CEO would effectively be involved in the financial decision to enter a new market.
- He raised a qualitative and cultural/geographical research focus, and **Samuel** described him as a strategic advisor and challenger.
- He argued fragmented franchise ownership can leave operators stuck on innovation, while Corsa's lack of that legacy structure could be an advantage.
- He said the financial model should connect Group A's findings with the Finnish market and provide graphs or visuals suitable for the presentation.
- He suggested cash flow, CAPEX and OPEX breakdowns, revenue and pricing assumptions, and a cost-control system as model components.
- He proposed starting with an illustrative price, such as 5 francs, 5 euros, or 5 rupees, then adjusting it using willingness-to-pay research.
- He said financial models estimate the future and that numbers should be relatable.
- He asked where the group could store and upload project documents.

TASKS

- Provide strategic advice across both teams.

Speaker 1

Speaker 1 shared marketing examples, raised cross-team coordination and deadline concerns, and proposed regular progress alignment.

POINTS MADE

- They noted the existing Ducati relationship while discussing a possible Jakarta MotoGP activation.
- They shared motorsport-related marketing observations in Zurich and Basel, including a Ducati-related coffee venue, Racing Unleashed, and a Subway promotion.
- They asked how Team A's cultural and segment research could coordinate with Team B's economic location analysis without silos or excessive exchange.
- They reiterated that McDonald's has 36,000 locations and noted that long leases can prevent operators from cutting costs.
- They asked for a shared workspace where the group could upload documents.
- They said ICO considered completing everything by 22 October ambitious and that the interim presentation should focus on future work and the next 90 days.
- They asked whether Corsa required deliverables by the deadline, given a possible investor discussion two days later, and whether the workload was achievable.
- They proposed regular alignment checks on deadlines and progress.

Marius

Marius described his finance background, identified inputs needed for modelling, and outlined a dashboard-based financial model.

POINTS MADE

- He described prior trainee work in fund structuring and administration at LGTM.
- He said financial work would require suitable software and baseline or market research.
- He suggested starting with a mostly similar business case because he lacked baseline figures such as an expected margin.
- He asked **Samuel** whether the Harley pop-up budget was 17-3.
- He estimated Zurich restaurant margins at 2–3% and said rent and employees might together be 95% of costs, based on his friend's family restaurants.
- He said his main output would be a standard business-case dashboard based on assumptions, and asked **Paul** for a pricing idea.
- He cited 5.50 to 8.50 for a cappuccino as his initial pricing frame.
- He said he personally tends to use Microsoft products.

TASKS

- Build the financial model and business-case dashboard using assumptions and inputs from the group.

Ana

Ana focused on benchmarking and research integration, questioned how the group would build on existing research, and proposed a shared Team A structure.

POINTS MADE

- She said she could gather documents and information supporting the team's data, numbers, and strategy, and expressed interest in benchmarking.
- She said she was focused on benchmarking and asked whether the team would seek new findings or repeat **Samuel**'s research.
- She said members were researching separately without knowing what others were doing, and asked how their work would be integrated.
- She suggested concentrating on the work already identified before expanding research further.
- She said Oakberry's popularity in Brazil surprised her, despite açaí being familiar there.
- She proposed a shared Team A proposal structure with each person contributing research to avoid repetition before the midterm presentation.

TASKS

- Gather research and benchmarking information for Team A.
- Propose a shared structure for Team A's proposal and research contributions.

Matthieu

Matthieu described a potential bridge between finance and strategic fit, suggested comparable frameworks, and raised location-data needs.

POINTS MADE

- He described himself as a possible connector between finance and strategic fit, citing Southeast Asia knowledge and papers about culture.
- He suggested finding a comparable framework for financial calculations.
- He asked whether a Zurich floor plan, measurements, and staffing information were available for the financial model and possible robotics.
- He commented that university work is especially difficult during assessment periods.

TASKS

- Research culture and geography for Team A.

Points to double-check

From an automatic check (gpt-6-luna). Some may be false alarms.

DECISIONS **Paul** is assigned as strategic advisor across both teams.
No matching transcript timestamp; check this item.

DECISIONS **Ana** is assigned research and benchmarking for Team A.
No matching transcript timestamp; check this item.

DECISIONS **Matthieu** is assigned culture and geography for Team A.
No matching transcript timestamp; check this item.

DECISIONS **Marius** is assigned financial modelling for Team B.
No matching transcript timestamp; check this item.

NEXT ACTIONS Research culture and geography for Team A.
No matching transcript timestamp; check this item.

OVERVIEW Overview
The role summary misassigns **Jonas**, **Tiago**, and **Marius**: the discussion describes **Jonas** as a coordinator, **Tiago** as a data researcher on Team B, and **Marius** as a calculator in Team B.

NEXT ACTIONS Provide the group with a Google Drive workspace.
Samuel agreed to provide a Google Drive workspace, but no deadline of today was stated.

Transcript

00:00 **Samuel** With you behind Dyson, you entered the room and you were like, “Oh, looks great. I mean, this is where we have to, I think, fulfill the business in the future.” And yeah, my last week was also really intense. Today I was able to join the AI summit because of this guy. And it was really interesting to see all the robots and things that they build. The one at ETH? From ETH, and it's AI Festival Week in Zurich. So this week you have many, plenty of

00:34 **Tiago** I went to a workshop at ETH today. Yeah? Oh, as well about this? Okay.

00:38 **Samuel** Nice. Yeah, I mean, I had to connect with ETH in the best possible way. We met some guys from ETH, and what I realized today is there are many robots, so we have hundreds of possibilities coming up in the second phase of the project. But the good thing is we're really not in a hurry. What they build is maybe a robot that can grab one orange and put it here, so we cannot build a kitchen on that yet, but it will come. And for this moment, we won't be ready, so we'll be ready. Yeah.

01:18 **Samuel** But did anyone, I don't know, have some good dreams about the project start or some ideas, or is there something that, yeah, I don't know, like

01:29 **Tiago** I had a really random idea. But I don't know to what extent you like it, but I think there might be something to build on it. It's like, have you noticed that the Indonesian flag is really close to the one from Monaco? Now that you mentioned it, yeah. It's basically the same. Like, just the shade of red is different. Monaco has a Formula One Grand Prix, as you know, yeah. And Indonesia has Jakarta, which has the MotoGP. MotoGP, yes. Which is not as big as Formula One, but which

02:15 **Speaker 1** is still decent.

02:16 **Tiago** But might be maybe interesting to do something with that. We work

02:20 **Speaker 1** together with Ducati already.

02:23 **Tiago** Really? If they have, like, something, you could do something at the GP in Jakarta which could raise brand awareness or something. And you can play on Formula One, red and white, which are also the Corsa colors. Yeah, that's crazy. And never

02:40 **Samuel** I thought about the flag.

02:42 **Tiago** And then, like, the Indonesian flag, white, red, MotoGP, Formula One. I don't know. I just had this, like, sure in my head and I was like, might be something. I mean, might be not, but

02:55 **Samuel** They talked about bringing Formula One to Indonesia one day. If that happens in the next few years, yeah, then the momentum will be insane, that we cannot get on the no.

03:07 **Tiago** But you can already start with MotoGP. Since it's like the same direction, like it's like something was like Formula One-oriented. So I don't know. It was like just like was popping on my head and was like, yeah. Absolutely. This year.

03:21 **Samuel** We would have had the chance. I didn't do it because it was too short to think about it, but then, you know, in Monaco, you have all the yachts in the harbor. Yeah, like Marina's actually really far away. Like, to walk for the rich people, it's far to walk. Yeah, to the racetrack and to cross the streets. So they came up with the idea of having a small coffee pit stop at the harbor for the rich people. Because when they wake up in the morning, of course they have coffee machines, some of them have them on the boat, but nothing is comparable to a real barista.

03:56 **Samuel** They have many things on those yachts, but they don't have a barista on the yacht. Yeah, that was also things that we thought. Yeah, nice to hear. Great idea. Great idea. That's nice. Okay. Anything else?

04:08 **Speaker 1** I mean, not that much of interest, but you mentioned Ducati and yeah, like I like to know, you know, like see, like observe what I have on the street. And like just this week I observed, like since I came to Zurich, I saw like two coffees that were directly related, one with Ducati, with like a big Ducati, you know. That's our partner. Oh, Kusin Barista. And one like just next to the train station. I don't remember the name. It's like blue, but it's more than connected to NASCAR. And you could actually, you can actually in the bar just behind, like, try a simulator of Formula One. Racing Unleashed. Yeah.

04:45 **Speaker 1** And I even saw like just an advertisement from Subway for a deal, like midday deal, something like that, lunch deal. And like the marketing was in green, but with like a big cart, and it's like refuel and stuff like that. And so I found it interesting to see that. Wait.

05:01 **Samuel** Wait, where did you see that?

05:03 **Speaker 1** That was in Basel. Oh, I took a picture. Because, like, refuel. Maybe not refuel. Oh no, pit stop specials. And yeah, fuel your next move. Like, oh, that's bad. Oh, okay, Subway. Yeah, those Subway with like a different aesthetic, but like it.

05:21 **Samuel** Everybody forgot it already in 2 months.

05:24 **Speaker 1** Yeah. But I found it interesting to see that, you know, this was in Basel? That was in Basel. Yeah, they have not in Basel. Yeah. I'll try it. Yeah, but I found it interesting to see that, okay, yeah, we are. This was made with AI, by the way, so they use AI too. Can I see it? It's a cruciate Moudwoh. Can I see it? No, but that was cool. What are they

05:50 **Samuel** doing? What are they hopping on? Like, I don't see it. But I think it's that, yeah, a subway is

05:54 **Speaker 1** like public transportation, I mean, like, yeah, I

05:58 **Samuel** I see. Thank you for if you s guys, this is perfect. If you see something on the streets, just make a picture. It's interesting to see what other brands do. But as long as they do it that way, I couldn't call

06:10 **Speaker 1** it. Yeah, no, but I mean, it's not a competitor, but just to see, okay, yeah, like we are in that trend, and like since also established brands which have, like, huge marketing and people beyond that say, yeah, what's gonna be the trend? And they come up with, like, that idea to connect with, like, motorsports. Like, yeah, okay, we're not, we have this ID, and it actually fits some proper markets, and I think, like, for validation, it's, like, still interesting to see. But no

06:40 **Tiago** Also maybe interesting, but, like, in terms of marketing. I was at a friend's place today with at Ideha within computer science, but, like, also, like, he took also, like, some

business-oriented courses, and we were talking about AI-made marketing, and he was on a research, which, like, maybe we have the results a bit before the others, the official results, but it's, like, that even people that are not, that cannot distinguish AI-made or non-AI-made visuals.

07:17 **Tiago** There's a vast majority that tends to prefer or in go more towards human-made marketing, and, like, original. Like, the one from Corsa is already, like, really good, and it also already fulfills that, but not to drift apart from that because this, like, human touch, which is, like, not perfect, like, you have those blurry pictures a bit, which is really hard to make with AI. It's not impossible, it's really hard. But there is a huge trend in doing marketing with AI. It's gonna increase a lot more.

07:58 **Tiago** So remaining on, like, human-made, even if it's more expensive, if you were targeting a more premium segment, it's gonna increase the perceived value of the company because even if people cannot distinguish between human-made and AI-made, they tend to prefer a lot more the ones, the marketing that is human-made. So it's just like a research we talked about yesterday during two hours about that. So we can talk a lot more if you're interested, but in the big lines, what you're doing is already great, and if you keep doing that and without changing it.

08:50 **Tiago** It might be even more interesting in the future where everybody's doing AI. And even if you have to pay a bit more, I would say stick with the human-made because there's like a premium look to it. That's it.

09:09 **Samuel** No, I think absolutely. I think that's really important to have in mind, is that honesty and real trust is gained through authenticity. And the only way to do that is to have a real product and to show the real product. So, I mean, even Subway has a sandwich, and they show I don't know what they show on this picture, but yeah. They don't show what they have because maybe what they have is not good enough. So we will try and focus on having a great product, and this product luckily is great, but what was more important, and we also realized that in Corsa, is how we bring the product to the people.

09:55 **Samuel** If the guy who gives you your food is not smiling, is not happy about what he just gives you or prepared, it's not the same feeling, and having a franchise or having a restaurant, you always rely on your employees that they are in a good mood. I mean, sometimes you're sick, sometimes you don't feel well. Of course, you will not, yeah, you will not provide the best service at all time, and we will take care, of course, that this type of Physical AI will at least reduce the amount of not having a smile, will reduce the unhappiness or something else from the people. But I think that's a little bit far off now.

10:41 **Samuel** Does anyone have a comment, maybe regarding financials, maybe regarding some other thoughts? I just want to collect your thoughts. It really can be such a small thing. We already have 2 thoughts. Maybe from the other side, is there anything that can give you something after the meeting that you were thinking about? It can also be a downside, can be a bad thing. I don't know. It can be

11:10 **Speaker 1** I have a first question while reading, you know, the different tasks of the different groups. Well, Group 1 is maybe more about the cultural aspect, that there are a lot of society analyses of the segments, and in the second group there is, for example, choosing the location.

11:28 **Speaker 1** And while it really makes sense from an economic point of view, because it's also like the price of the meter, yeah, the meter, and all the costs that are there, it of course has to be chosen after being carefully reviewed, also what the first group has said, because different segments of the population are going to different malls or different neighborhoods. And therefore, how would you say we should collaborate between the groups? Because if we just think in silos, then the danger is that, okay, we have some conclusions from an economic point of view that don't match what they also analyzed in the other group.

12:12 **Speaker 1** Do you maybe have an idea how we should really work without just exchanging too much, because then we could not focus enough on what we should do, but still have enough contacts and just not move in 2 opposite directions?

12:28 **Samuel** Great. First thing, never explain yourself unless I ask or someone else is asking. And second thing, finally. I mean, I was hoping for it. I mean, it never came up. You never asked for it, and I think in the end it would be really messy if we have 6 or 8 people not knowing what they do. So, what does every company have underneath the email signature, underneath the name? Department, culture. Okay, phone number. But what is most important? You have a job title. And you guys don't have a job title right now.

13:08 **Samuel** So, like last week, I went home and I was like, it felt like having 6 new employees at the same time. This is how I felt for us because we work as a company, we think as a company. And we were like, we, but it's not an employee thing. So you guys all have different powers. We saw that in the persona test. And yeah, I would like someone to take a pen to the Kanban board, write down our names, and give the job titles that we need. Absolutely. Great. It would be really great if we didn't hire the same job twice.

13:55 **Samuel** So yeah, you can just write the 6 names, that's great. And once we have the job titles for any one of you, I mean, we will define that **Joshua** will guide a little bit more. Don't forget **Joshua** and **Samuel** as well. Yeah, you don't need to write us right now, I think. **Samuel** interim? No, it's **Jonas**, **Paul**, **Ana**, Matthias. Who's Matthias? Yeah, Matthew. Matthew. Oh shit, sorry. How do we all love each other? E I E U.

14:28 **Marius** E U L. Exactly. I put the two keys, though. Yeah, it's a good form of defense at this point.

14:34 **Tiago** It's a good jungle. I

14:36 **Samuel** dislike it. So, which has nothing to do with this. Great. **Paul** and **Marius**, you're both mainly in the financial group. True, yes. So you just worked at LGTM. What was your job title there? Trainee. Trainee? In what department? With fund structuring and administration. Okay, administration. Trainee administration. What else do you see, Josh, in financial, in the financial department, that we need for this next month? What position is made for **Marius** based on his past and also what he will do for us? I think I can open it. Treasurer would be good. Can I treasure something? What's it, treasure? Treasuring. Do you know what's treasuring? Because I don't. Treasury?

15:40 **Samuel** I mean, I would know in German what's just such treasury. No, that's not. It's still treasury. Treasury. It's the treasury. That's the treasury. I can pull up the translate. Yeah, I don't even know what treasury means. That treasury is Manch money. If you

16:05 **Marius** If you d- if you translate it directly, it's a vault. It's similar to a vault. A treasure is where we put valuable things.

16:15 **Samuel** Okay. Charles Carl. Okay, so you take care of the value together with **Joshua** because he will protect the company. Cool, great. Okay. Joe, please. What's the name for this? And your only up dialing? F S K Y pressure? No, tell me. That's amazing. Yeah, pair B, fine, that's. So you work in the department B. That's nice. Team B. So we have team B. And what's the function? But I know you never worked in the company and you maybe never will in the future five years, but when I started in a startup, my boss asked me, you can write whatever you want, just don't write CEO. And it worked because this is how I felt after.

17:16 **Samuel** But calculator. Calculator. Is it's just okay. Für mich ist ein Taschenrechner, aber calculator. Cost calculator.

17:25 **Tiago** Well, analyst maybe.

17:26 **Samuel** Analyst. Okay, is that fine for you? Do you see yourself in this position? So you act like this in it in this position. Sure. Okay. We go to **Paul**. He is team

17:43 **Matthieu** No. He's midfielder. Jumper. Midfielder, sorry.

17:49 **Samuel** East A slash B. How do you see yourself?

17:57 **Matthieu** I have to say that I think because you go science. I think probably a connector between the financial, between pair B, the finance part, and also because I have some knowledge of Southeast Asia already, wrote papers about culture, this discrepancies between the strategic fit and the finance fit. Orchestrator. Orchestrator, yeah, that's a better

18:26 **Samuel** word. Correct. Mm-hmm. But in a, like, in as a job title? A job title. Somebody at finance? Mediator. No

18:37 **Matthieu** that's solving conflicts. Yeah, that's true. I find it difficult. Orchestrators, like, mm-hmm. Yeah, orchestrator sounds good. I find it a bit difficult to really identify myself with the finance part. Okay. But I don't want to say that I'm not interested in it because I'm still an HSG student. I'm interested in finance. So the CFO decides?

19:07 **Samuel** Give him a job title. Are you titled?

19:14 **Paul** I would say, like, strategic advisor.

19:21 **Matthieu** Huh? You see yourself in that? Sounds more corporate than orchestrator, but it's not

19:27 **Speaker 1** You're answered when you're gonna send reach-outs like this. Like this. Yeah

19:32 **Samuel** John. Okay, oh no, you are team A, right? Yeah. I give you another five minutes. Thank you. And I was like, mm, I to **Tiago** as well. **Tiago**, I know you have many things in mind. Take one.

19:57 **Tiago** I was, oh, it's my turn or not my turn? One, two, four, one, four, six. No, so team mate. I was head of marketing in, like, huge club in Shanghai. Huh? We used to

20:12 **Samuel** Do a lot, but in this project I don't think we need a CMO, and I think I would take that part. No, but, like, I'm coming in. You're coming from that.

20:22 **Tiago** Yeah. So, but I, we used to do a lot of market analysis to understand, like, what people want, what they, how they react, how I have a good idea. What they can I write it? Of course. Data researcher.

20:44 **Samuel** I think that's, it's right. That fits you perfectly. Yeah. Yeah. I like it, I take it. Yeah. So you're not Team A. Was I Team B? But, oh, sorry, Team B. Absolutely Team B, yeah. Yeah. Well, Genesis. Was that the modules? Calculator? That's really good. At least we have a calculator. Yeah. So what does a calculator need to, like, you provide numbers to what department in LGT?

21:24 **Marius** The proper term is a management company. Mm-hmm. So basically, I did all kinds of stuff because an intern just does whatever nobody else wants to do, basically. That's not what you have to do here. Yeah. Exactly. What do I need, like, for this computer wrestling?

21:53 **Samuel** Numbers to be a calculator, okay, you will have numbers for sure. Is there something that has to be provided to you to fulfill your job in finance, like in terms of numbers? Or you don't need anything, you can do the research yourself. Do you need a researcher? I probably have.

22:16 **Marius** I probably have, like, I should have the right software. Okay. I need your... You're having access to software? Yes. Okay. Whatever you did as, like, baseline research would be great. Like, whatever market research you did. Whatever you should probably tell. What's your, like, goal? Be sure you have funding. What's your goal? What's your goal in life?

22:46 **Samuel** Like, budget? Answer my question first and then I'm gonna answer yours. What do you need to be a calculator? To be a good calculator. Coherent numbers. Coherent numbers? So if I give you numbers based on my research, yes. You just trust them and you say, "I work with those numbers"? No, you also tell me what you need. Diligence, like, I don't know what I need. I'm not working with finance. **Joshua**. **Joshua**. You're not gonna ask for help. But you know, you learned it for the past four years. What do you need as a calculator? On based on what you work, based on what you will

23:29 **Tiago** Optimization. Reliable numbers. You need to check the numbers. Check the numbers and work with them.

23:36 **Marius** I mean, you can tell me what kind of modeling you want to be utilized, depending on your jurisdiction of verse.

23:49 **Samuel** It's a new market. Nobody opened an Italian restaurant ever, let's say. What would you do first as a calculator? What would you begin with? Where would you start? See, this doesn't happen so often. I have no idea how to answer your question. You don't have to be right in answering, "Where would you start?" There's no right and wrong in here. This is a closed room. You guys have to learn. I have to learn. We have to build something here. It's okay to not have an answer now, but where would you start? You can ask your employee colleagues, if you will.

24:27 **Matthieu** For help. What do you want to say, **Paul**? I would say find the next best comparable framework in which to calculate the, and in which to the arbeiting use those numbers and calculate with those numbers. Does that make sense to you, Moby?

24:46 **Marius** Well, I would have answered now that you're gonna make me, if you put me in the pair B and I look at what it says, I don't have any baseline, like I don't know what margin you are expecting, so probably, hey, a mostly similar business case. And who would that

25:10 **Samuel** Do that? Take that as a baseline. Who would do that in a company? Yeah, probably me. Maybe with the calculator already? A data analyst, I don't know. Data analyst? Prices. Mm-hmm.

25:24 **Paul** Yeah, effectively, it would be CFO, hence CEO together.

25:31 **Samuel** And, but before it comes to the CFO, yeah. The CFO would say, "We go to a new market, let's go to Indonesia." And he will tell his employees, "Let's go to Indonesia. We're not in Indonesia right now." So he would tell his calculator and analyst. Yeah. Researcher. Data analyst. Would you like to be a data analyst? To provide him what he needs to be a calculator and give you back the numbers, if it makes sense or not. That actually sounds really good for me.

26:09 **Samuel** We're not done, Mobius. I'm officially afraid. You have numbers. You have data. And we need the Jakarta business case. Funding needs, CAPEX, OPEX, revenue forecast. Scenarios, sensitivity analysis. Do you see yourself in something else and just calculating numbers? Because this, I think, may be too boring after 2 weeks. I don't think so. You don't know me. HSG core. All right. Calculator. Also, **Marius**, you had some time. Where do you see yourself to provide to your colleagues what is missing in terms to have a great strategic fit?

26:58 **Ana** Yeah, so I feel like I fit in as someone who does what has to be done, and I feel like to get the data, to get the numbers, to get the strategy, you have to research beforehand to get documents and information, so then you can work on it. So maybe something related to it, like a person that will collect this kind of information and provide it to the others. For this, I need a name for them. Yeah. Researcher. Maybe.

27:35 **Samuel** Researcher for the strategic fit. Okay, makes sense.

27:39 **Ana** And maybe I would like to work with the benchmark, benchmarking.

27:43 **Samuel** Research, yes. SAI research, sure.

27:50 **Ana** I would like to work with the benchmarking, maybe. If you like Okiberry, it's part of my life. Oh, very nice, yeah, absolutely. I go every Sunday with my brother, so I know it. And I was there in the beginning, so maybe.

28:10 **Samuel** I don't know if it makes sense, but I'm gonna write it here, and maybe we can shorten it down after. Yeah.

28:14 **Ana** No, what's the last word? Benchmark analyst. Ah, okay.

28:18 **Samuel** Sorry. It's just, you don't want me to write in hands. This is how I actually write.

28:25 **Tiago** No, it's just a concern about **Jonas**'s role. Yeah. A data analyst is a great job. But I think **Jonas** has a talent that not a lot of people have, and it could be a bit wasted if he would act only as a data analyst. **Jonas**, I think one of his biggest strengths is to be extremely realistic and tell people, hey, you're going too far, hey, let's focus, what you're doing is useless. And when we've done group projects together, that's a strength of his that I really value because he's not against creativity and innovation, but he makes sure that it's going in the right direction.

29:17 **Tiago** So.

29:18 **Samuel** You're telling me he's a great

29:22 **Tiago** He's a great manager.

29:23 **Samuel** Coordinator. Okay, coordinator. But

29:25 **Tiago** He can do both, but for me, if I was building the team and it depended only on me, which is not the case, okay, you know what? That's a good thing.

29:36 **Samuel** And this goes directly to **Paul**. So **Jonas**, in the beginning, will provide **Paul**, I would say, a first plan. But **Paul**, I think you're really great at challenging things and seeing things differently because you just have some work experience and some other experiences, and **Jonas** can maybe see it from another way. So, I mean, yeah, I think that makes a lot of sense if you're sharing the team together. I think we have someone missing, no? Did I forget something? I squeezed before we split, like Mathias in the kitchen with I was Team A, yeah. I'm really sorry, but squeezed in a lot.

30:40 **Paul** Honestly, I was thinking about the word researcher before, so now I have to think about something else.

30:46 **Ana** Sorry. The boys. But I feel like maybe we can do the same but focus on different things.

30:54 **Tiago** There is a lot of research to do.

30:58 **Ana** Like maybe I can focus on benchmarking and can focus on something else.

31:05 **Tiago** Qualitatively, but

31:07 **Paul** also, like, geographically, cultural, geographical

31:12 **Samuel** Yeah, maybe like cultural geographic reception. Yeah. Your traveling should be differentiated. I like that one. I like that one. What that is really worth. Culture and wow, this is really important. Geographic researcher. No, I thought that's right. So you were in Australia, you were your research.

31:41 **Ana** Yeah, that's why, like, I was focused on benchmarking.

31:45 **Samuel** Good. So now that we know at least somehow where someone fits in what department to work on, in German we say verhaltihausel, behave like that. What that means is focus on your table now. This is your table. And you guys have to provide all the time to yourself, validate, and then provide to the team. And I think the other way around as well. I see **Paul** always as a little bit more as a challenger of things. Of course, **Paul**, strategic advisor, and this is what you probably have to do. If you do some research or anything else yourself, great. But I think don't focus on providing where you have experience.

32:31 **Samuel** Try to help others with your experience and not do the job for them, as I did now. I didn't do the job for **Marius**. I really wanted him to tell me what he needs. In every language possible, you could also talk in German to me. But what do you need? Because he will be the calculator. Do you really want to know the calculation that I did for the person? You want to see that? No, revenue minus cost equals profit. So we have a beautiful folder here with finances. Oh. I'm talking about the first one. I don't think you have seen that. I'm talking about the first one.

33:15 **Samuel** I mean, the name of the file is even more creative than the file itself. So this was, you see? I needed signs in my, did you ever put this logo? Yeah. It's my first time seeing it. So there is also, I started and five too many colors and that. You have to see when it's empty, yeah. I had no more interest in fulfilling this Excel point. So what I realized is, and this was, I think, latest, that was the day where I called **Joshua**. We have strengths and we do have, like, the opposite of it. Please, we are this team of 8 people.

33:58 **Samuel** Don't try to fulfill something that you maybe don't have a skill in. Challenge yourself, but there's a really small gap between challenging and trying to do it yourself. If I'm not a good basketball player and I try to challenge him in basketball, it will take at least a year that somehow I can challenge him, maybe. We don't have a year. We have 1 day sometimes. So if you really realize it's 12 p.m. and I can't go on, and okay, I can 1 a.m.

34:33 **Samuel** tomorrow, yeah, my lesson starts at 10, let's do it, and you can get it done. Great, I'm happy, really. You make something, you will leverage your skill, but if you're not a finance guy, call your colleague. That's what I did with **Joshua**. Ego should be lower than execution. If our ego is too high, we will lose time, energy, and maybe you have 1 gray hair at the end of this project, which I really don't want your time. So let's go back to the

35:08 **Marius** scope. Did you just one question. Did you start the Harley pop-up? Was the budget really 17-3?

35:19 **Samuel** The budget was more, but actually I could have spent even less. After all. That was 17. Do you know what less? Do you know what is most expensive? I have a creative media agency. I build a lot of things with my team. I didn't spend any dollars on creating a picture and making marketing and stuff. But for example, I realized I had 2 weeks' time to open up, I had 2 weeks' time since the confirmation of the contract until opening up the pop-up, nothing existed. Nothing. Not even the name Corsa. In my brain, what existed was the vision of, oh yeah, Italian place, coffee, vintage cars, maybe. Nice.

35:57 **Samuel** So in the first night I did all the visuals in my brain. In the second night I gave it a name and I made the CI/CD. In the third night, my grandmother died and I flew to Brazil in the same week. Flying to Brazil, I contracted the sponsors Vitamin Well and Microlino. They both said yes. I mean, to be honest, it never happened in my whole life that the first 2 that I call say yes. Never. Never ever. Maybe the third, Free Lemonade, we asked. But they were in, but we didn't like lemonade in the end, how they behaved.

36:32 **Samuel** So when you don't have time to ask yourself, oh my god, is it gonna work out? Oh my god, is 70K enough? Is it too little? You're gonna fail. You're 100 percent you're gonna fail because you have too much time thinking about it. But if your date is coming tonight and you have no time to go to the store, you will cook something with whatever is left in your fridge, with whatever is left on your shelf. And she will say, oh my god, it was so nice, it was so good. Because you didn't think about it and you probably made it with love.

37:09 **Samuel** And all you have to do is take the pasta at the right moment. This is all we had to do. My first question was, who does the recipe? Do I have time for that? No. Could I do it? Yes. Ego, high, low. Let's go to the Michelin chef. How much do I need to pay him? 3K? This was out of my budget. But what did I do? I paid him 3K and then I cancelled something else that I wanted to do. Because in the end the product is much more important than everything else.

37:42 **Samuel** Once we made some cash flow, we invested in a new sign because there was not a sign with specialty coffee, and the people didn't know what we have. I mean, the pictures were nice, but they didn't realize what they can buy. They saw two models. They didn't see pasta. I didn't think about it. I don't know. So I spent, I think, after one week, I spent 600 dollars on a new sign, or 300 dollars emitting a special price. And yeah, so this is how we doubled up. We realized the pans that I bought were too cheap. So we created cash flow, and I think in the second week we had great pans.

38:22 **Samuel** What can I lend? What do I don't need to pay? What can I, where do I have a favor left? The amount of favors that I gave back, no, that I took back, insane. I think over 10 favors at least. I still owe a photo shoot to someone. Hopefully he will never know. No. Of course I would do that. But those are the things we went through, that the question, “Do I have enough money?” never came up. It was always like, “Is it enough to pay them, please? Is it enough to pay them, please?” And yeah, it was.

38:57 **Samuel** It was absolutely, and I think we ended up in, I think it was 21K in the end. Invested money? Yeah, and we had return on investment in those 3 months. So in gastronomy, if you don't have a robot, if you don't have, like, you know, something else AI or a subscription-based model or whatever, it's, I think it's, yeah, it's great. It's not bad. It's not bad. I thought usually it's

39:23 **Marius** 6 months to 12. I thought you would have to spend, like, way more just to get it to

39:30 **Samuel** exist. Yeah. Yeah, I mean, but there was somehow a kitchen, and it had a ventilation system that somehow worked, but it was not enough. And we rented a lot of things, so, like, the pasta cooker I rented, so the big industrial kitchen supplies we rented. There was a coffee machine from Lamarzoco already in there, which was super nice, but super got so old and so shit in the beginning. But my barista, it took him 2 nights to clean the whole fucking, like, clean that coffee machine. But after those 2 nights it was one of the best coffee machines, so yeah, you just try and error with what you have.

40:08 **Samuel** And this is what I want you to do here. If you have access to the, I don't know, number system from the old bank, or if you have a friend that works in blah, okay, yeah, let's go. I mean, we are here to work together with those people. We are at HSG to maybe have the highest key feedback. You know, this is what we need. Of course, we need your expertise and what you've learned. But also, don't forget to not be stuck for too long. Use this WhatsApp group. I promise, after 3 days of not writing, anyone not writing anything, there's something wrong.

40:43 **Samuel** There has to be something wrong, or you're writing the job behind the chat, which is okay. At least you talk and communicate, but use this chat so at least we see. **Joshua** can interact in financial, and trust me, I can interact in team A. And yeah, we will be there where we have to be. So let's, yeah, sorry.

41:03 **Tiago** I would create a WhatsApp community. How it works, it's like a group of groups. Everybody can access all the groups. But we have a team A group, a team B group, and the group we already have. So if we want to discuss, I don't know, like a new project in team A, it's easier to find the messages if they're not mixed with team B messages and organization. Let's do it.

41:34 **Samuel** Yeah, it does very well. I already easy. Okay, great. Let's do team A, team B. Let's make sure that all the elves and the general rhythm we have.

41:43 **Tiago** I just have one question. Is you already did some market research, I guess. Did you?

41:51 **Samuel** Yeah. In our way.

41:52 **Tiago** Okay. Do you have it written somewhere, or like, are there? I can send you.

41:58 **Samuel** I have a Corsa GPT built. Okay. And I highlighted all the... I mean, once one, the GPTs are insane. But yeah, even I can provide it to you. I think the most interesting one is Corsa. So pit stop, and then I have the highlighted ones, and then, and yeah, I can share it with you. No, you cannot share it. It should be... No, this not. But why can I not see the usually? Oh, checked, sorry. iPhone is not dumb. I can go through the most interesting chats that I've had, and of course, we do have, yeah, I can provide you some stuff if that's interesting for you.

43:02 **Tiago** Just to have a look, and maybe we can build on the rest. Yeah, we can do that. We should challenge it.

43:09 **Ana** Yeah, but sometimes I feel like, are we searching for new things or just trying to get the same results as you already did? You know, like, no. Are we adding to research that you have already done? This is

43:24 **Samuel** your senses. This is your sentence. Okay. If you're right, it would be nice, but at least try to fulfill that. This is overall. This is why it's written here, and then this is not where we don't go away from

43:39 **Tiago** that. Okay, I have another question, and I know that we are supposed to do the research and help you find the best way to enter and to proceed in Indonesia, right? But if we forget that we are the ones helping you decide in your head, let's say we're in 2 years, what is happening in Indonesia? Ideally, what do you have in mind when you think, okay, 2 years from now, what is Corsa? What are we doing? Is it only in Indonesia, or are we in other places? And how is it? Is it like a pop-up in Indonesia, or is it like a long-term restaurant?

44:30 **Samuel** Second. So yesterday we calculated, to be worth 100 million, you need 340 locations across Asia. So in... Only God knows if we're there or not. That's why it's so important to focus on based on what? Based on what? Based on what kind of model is that assumption based? 350, around 350 franchise models around the globe, doesn't matter where. I mean, yeah, if you compare the currencies and where you... Do you want it to be a franchise? I mean, who are we if we don't build a system that works for everyone?

45:17 **Tiago** You can build a system that works for everyone without being a franchise. That's really hard to really develop, like, on a really high scale in a really short time.

45:25 **Samuel** Without a franchise, you're lost. Without a franchise, yeah. We built Corsa. Good in marketing, like me and **Joshua**, we are good with the numbers and the marketing, and he's from Italy. I tasted Italy. We know good taste, we know great pasta, we know how to make great marketing, but this is not the future. The future will be that many people can generate marketing, and it will maybe be enough to have a subway car refueled thing on the... I don't even know, bus or tram or what it was. It might be not.

46:02 **Samuel** So in a world where we lose a lot of quality in marketing, a lot of quality in food, a lot of quality everywhere, we lose. But people accept. It will not be average enough to have a great product and great marketing, maybe for the next 5 years. But what we're doing

here is building the footprints and the steps to lead to something that can be accessible with robotics, with Physical AI, with the future. Imagine going to McDonald's.

46:35 **Paul** How many locations around the globe?

46:37 **Samuel** 36,000.

46:39 **Speaker 1** 36,000 locations. All our

46:46 **Samuel** franchises. So almost all of them are owned by a different owner, different nationalities, different countries, different blob levels. Now you go to them. Hey guys, why you have 20 employees that doesn't bring me the ketchup? Or that is angry at me? Ever been in the McDonald's at 4 a.m.? Was it a nice experience? It was not a nice experience, right? If you were sober it would be. I mean, how not? We are human, we do not have to work at 4 a.m. But a robot you can and he will not ask you how you feel. But he will also not show you how he feels.

47:27 **Samuel** We don't have to answer those questions today because on the way we built something with 18K, we didn't think about working with HSG. I did not. I did not think in that moment. I was thinking about my grandmother and I was thinking about pasta. That was enough, guys. Really enough. Seven, six months later, I did real estate for 7 years. I checked every location in Zurich and I realised, okay, do I want to be just another guy providing food? Calculating numbers all the time, how to pay the employees because margins are so low, costs are so high in Switzerland. No. We will not survive. Maybe 5 years.

48:09 **Samuel** Maybe you can build three locations and walk around in Zurich and be like, Oh, I own some restaurants, you know. But this is boring shit. We want to build something for the future. If we can lower costs in the future by 50%, we can provide food 50% cheaper, if good quality food, if we can provide good quality food 50% cheaper, there will be millions of people willing to eat our food. Do you know

48:39 **Marius** Margins, restaurant margins in Zurich, pretty sure, is like 2, 3% and I think rent and employees together, it's like 95% of cost. How much was it in the point?

48:52 **Samuel** It really depends on, but I think 60% is employees in the rent, or 50%, and if you compare, like...

48:59 **Paul** Bonus also to, I don't know, price five or I don't know. Yeah, so it's because my...

49:06 **Marius** My best friend's family, they have some restaurants. They do Carlton, for example. They do Sobelier Roof Garden, Sabelier as well. He's Signaler, his name is. And he was like rent employee. His debt was rent employees, 90%. Yeah. What kind of margin, which makes the margin low by default? What margin are you, like, expecting, do you know?

49:34 **Samuel** With what? With or without employees? Or what do you mean with on and...

49:39 **Paul** So there are like 2 things. Now think just about we have a normal store with employees, etc. What we're gonna achieve in the future will be another stop. Yeah. But yeah, now just focus on we have like a normal 2026, 2027 standards store, and then we go to the future, yes. Yeah. And this is also what we realized, like the franchise you see today.

50:05 **Paul** I don't know how, but like the owner structure, they are like really stuck sometimes when it comes to innovation. So actually, like McDonald's is just like you own a part of the brand, but the owner of the store itself is someone else. So there are like groups of investors, they own like 5 McDonald's, or no one really owns everything. It's also...

50:41 **Paul** But the problem is like they are stuck in this ownership, fragmented ownership stuff. So actually, we have nothing, but that's our biggest advantage now. So we can start really and then build in the innovation and then go on. So...

51:02 **Speaker 1** Don't have a 20-year lease that you cannot, like, cut out any cost.

51:09 **Samuel** Yeah. They are stuck on the location, and then maybe they will tell us, "We have the robot ready," but they will say, "We need 50 square meters more because it is that size." And he will be like, "Where, on the parking lot?" And he's, "No." So, to answer your question, I want to know from you in the next 3 weeks what is the highest margin that is possible. Because we build what nobody has built before. We don't need to compare ourselves. We can. Okay, why not? Let's compare the Philippines with Indonesia, let's compare Monaco with the flag, whatever. Yeah.

51:44 **Samuel** But again, if the margins is the best, and our food is the highest quality and it's under, let's say, Switzerland 20 bucks. But this is the product, and we build around it. And we will, yeah, we will do something about it, but never forget. I always told **Joshua** also, because he also had then, yeah, but this is how you can scale and you can do this and that and this and that. And I said, man, I love you so much, but the only way to make fucking money is if we bring the pasta into the water and have 50 clients more tonight.

52:19 **Samuel** And by the way, I don't have a cook on Sunday. Can you cook on Sunday? It was really like that. And then when he was cooking the first time, you realised. You know what he said? I will never forget the one. He was cooking with the nice thing on and, like, doing his thing. He was a bit slow but great. A bit slow but great. Man, you know, we just have to sell pasta. That's all we have to do. And I said, oh really? You know, I was there in the kitchen all the 5 days, sweating my ass off. I was like, because we have to fire the cook. The bad cook.

52:59 **Samuel** The first cook that we had in the first 4 days. And I was like, oh really, we have to cook pasta? What do you think I was doing for the pasta for the first 4 days? We can dream. But please, right now, we have to come together after that one week of finding and defining. I mean, we leave a big gap. But now you have the scope, and you have written the scope, and, like, you have put it down. But our scope had deliverables on it. And we're gonna go through the deliverables as well.

53:32 **Samuel** And maybe we can divide the deliverables already so that you know in what kind of team you're not only not acting seitman out here, but in ruling in what kind of team that you rule, but also what you have to deliver. So to answer your question, I think you're gonna answer it yourself in the next 3 weeks. But this is the right question, but you're gonna solve it yourself. That's the biggest and different thing. We don't have to compare too much.

54:00 **Samuel** We don't have to, I don't know, like just fill out an Excel. Yeah, we will give you some templates and we will give you some structure, but the more we leave open, the more you will build something that is new, and the less we leave open, the less we build something new. So we really have to, that's here. I mean, guys, if it was easy, we would all be millionaires. Every one of us. But very few people can bring strategy and execution into here. Here's your margin. Here's what you're thinking about. And here's how you're gonna do it. And here we have to be at least in one moment.

54:39 **Samuel** If we can be here, black trusting guys, we're gonna meet again in 3, 4 weeks and you're gonna be like, this is this guy, this is the data, this is the comparison calculator, yeah. Show me the numbers. This is how we will work. I think it's gonna work

54:55 **Tiago** out. Can I just confirm something? Yeah. Just to be sure I got it right. The goal first now is to open your restaurant in Indonesia. That's clear. After that is to have, after the meeting next week, maybe we open a restaurant in the meantime here. Oh, really? Yeah. Nice. It can change, guys. Yeah, but like, we opened the restaurant. The pasta is so good that people want to have the same restaurants, and we build up franchise, right? Mm-hmm. Okay. Because it changes slightly the idea I had in mind. Because first, you need to have a product that everybody loves and wants to eat, which is already the case.

55:41 **Tiago** But if we are building a franchise next, you need to appear interesting not only to customers but also to people that want to replicate the franchise. If you talked about McDonald's before, McDonald's is more of a real estate agent company than a restaurant. I have the numbers here. 6.6 times more, like the operating income, it's like 600% of real estate, and wait, that wasn't clear. It's 6.6 times more net operating income from real estate than from its own food sales. So they earn more money through having the place, and translated

56:23 **Samuel** in my brain it's already shit what they do. They don't have a product

56:27 **Tiago** anymore. They have a product, but they don't

56:30 **Samuel** sell it well enough to survive.

56:32 **Tiago** No, they sell enough to survive, but how they make money is they have the place where people pay them to use the McDonald's brand and to use their machines and to sell their products that they invented, but they're not the ones advertising, they're not the ones cooking the food. They have McDonald's restaurants, but how they make money, like, what? What's the question? Okay, no, basically rent. No, they're collecting rent.

57:01 **Tiago** But if the goal is to be a franchise, we need to do research as well, not only to interest people, because that's the first point, the most important, but after that it's also to make Asian businessmen interested enough in the company that they want to replicate it. And it changes slightly the approach, according to me. Because if that's the goal, to be a franchise next, it's the first shop needs to be so impressive that, because McDonald's, everybody knows McDonald's, they don't have to raise brand awareness and they don't have to, everybody knows what it is. Corsa in Indonesia, nobody has ever heard about it almost.

57:43 **Tiago** The thing is, like, the first one needs to be so shockingly impressive that people are directly interested and say, “Hey, I want to do this too.” And it changes the approach on how you enter. If you want to be a franchise next, first make them wait and, like, “Hey, that's us,” and then open the doors and, like, “Hey, you could do that as well.”

58:08 **Samuel** You can leave it open a bit. Yeah.

58:11 **Tiago** Yeah. It's just, like, it's just to confirm the opening, just to confirm if I got it right before, because it would change the approach I would take. If the goal is really to be a franchise next. Yeah, it will be like this. Yeah, for sure. But if the goal next is to be a franchise, it's

58:38 **Samuel** We're not allowed to define things that we are not capable of needing. The thing is, and I'll be completely honest with you, if we have an investor tomorrow and it's, it will be like that, and he will be like, “Yeah, we can invest 50 million. We build with one, and with one we build 50 million.” I think at least 20 to 30 to 50 locations. So then what are you gonna ask for? Oh, we have to focus? No. No, over tomorrow we're gonna ask, “Okay, is the investor a businessman from Indonesia?” I think it's still too far away.

59:18 **Samuel** I would not think about that now because if we focus on those things and those things right now, in 3 weeks your answer is answered.

59:28 **Tiago** Okay. Your answer.

59:29 **Samuel** Your question is answered.

59:31 **Tiago** Okay, but it's still an idea, a possibility to open a franchise.

59:34 **Samuel** Yeah, but then again, you think as a franchiser and then you do this again.

59:40 **Tiago** No, it's, it, I always leave the doors open. It's just like to have a red line, and he knows me, I go like that. But it's just like to have what you have in mind clear. Yeah. So we can go in that direction, and on the way I always see, like, tack tuck tack tuk.

1:00:03 **Samuel** The thing is, I know you're gonna do it anyways.

1:00:05 **Tiago** The French, I mean, he was just...

1:00:08 **Samuel** Yeah, I know that when we hang up the phone after a call, I know you're gonna do this type of research first. And then maybe you're gonna come back with, “Look, Sam, the thing is, I still did it, and it's okay.” But for now, what I need to hear is: can we follow the scope? I have a question, actually. Like...

1:00:32 **Ana** Now that we have the split things to do, like, you dropped that. Yeah. Like, I feel like we're just doing against something that was already a problem because, like, I feel like everyone was researching about the topic and, like, collecting data, but no one knew what each other was doing. So I feel like maybe now even more that we had split it, we have to, like, think how we're gonna, like, put it in together in a line, okay, in a line, because I feel like I'm lost regarding what they're doing.

1:01:11 **Samuel** Yes. I knew this meeting is longer than an hour, but we're gonna keep it short. So now we are actually having the meeting that we need to. But without the conversation before, I think nobody knew where he is on the field. And we have to give each other time. Time is so important right now, even though we need speed, it's a bit controversial, but we don't work together every day since, like, one year, so how do we want to behave like that we can? And this is what I want to say, is, like, we can pull the pace a bit down, but if **Tiago** thinks he's gonna do 3 more researches tonight, absolutely, please do.

1:01:56 **Samuel** But don't expect from each other that the others will be the same. Let's also know that we have to find our way of being a team, and this needs time. And this is why I said, please take some time tonight to have at least one drink, to not talk about Corsa, to just talk about maybe whatever, and to become this team that we should be, because in month 2 there we have to behave like a team, and now you have the little advantage of working with stuff that you mostly have a relation with. But after that, you have to be a team that doesn't know whatever anyone is doing, because everything is new. Everything.

1:02:41 **Samuel** Watch YouTube videos about robotics already because it will be so new. Really, I learn new stuff every day. So I would like to take on our internal scope, the one with more pages. I know you prepared one for HSG, but I mean it's basically what we had summarized, written down with you, but I didn't see anything that was completely different. Would you prefer this one or the other one? I don't know. You can take yours, yes. I think so. It has more questions, it has more inputs, you know. So did anyone, and I'm asking, and please say no if not, it's not a problem, did anyone read number 5? No. Good. Okay.

1:03:25 **Samuel** So this is what we can provide. And please read it through. Mine shortly.

1:04:13 **Samuel** So, to keep it short. The logic behind something and answering the margin are two different things. Again, it's not only that you have to provide to us, we also have a task here. We have to guide you, we have to provide you knowledge, we also have to be careful of you actually learning something new, but also not lose yourself in the process, and also to get a great grade at the end and your credits, right? So never forget whenever you sign a contract in the future and you work for someone, you're not only the one that does things just to get a salary.

1:04:58 **Samuel** Please make sure that this person also provides you what is surrounded with a good contract. So whenever you guys feel not respected enough or whatever, let's have a chat and let's talk about it. That's the only way to have progress. Until then, we provide you with the pop-up learnings. We gave you a few today. We can give you more. I think that happens with time and talks. And the pop-up revenue and cost information, I think that's really important to have our relation. He's already on. So **Joshua** can provide that for you, or at least for the Bahnhof Schloss location that we almost did, where we did the full calculation. Yeah. Yeah.

1:05:46 **Samuel** So we have a full business case because I was eager to create, after the pop-up, a 400-square-foot Corsa. Which, yeah, could have been none without, but they didn't have a great ventilation system, so it didn't work out either. Product performance insights is, in my opinion, the Corsa Latte. Corsa Latte was one of our products that performed really good. It was an infusion of hibiscus. Hibiscus helps you to increase blood flow, especially in the morning. So we did a flat white coffee with hibiscus. From the menu, we didn't have quite a logic what we want to have in the future, and I'm really sorry, but I was not sure if Ock was actually, yeah.

1:06:36 **Samuel** The menu logic was in the end, and this is the learning already from it, so don't think about the pop-up now. Just what I tell you now: to have 6 bases, all pastas, gluten-free, protein. Normal, integrale, what else? I think a few as a base, so you have the great carbs, maybe rice pasta, maybe something, chickpea pasta, whatever. To have those as a menu logic like RiceUp. Maybe you have been to rhizop before. You have the bases. Then you go over to the sauces. Mediterranean sauces. Great to have protein sauce.

1:07:16 **Samuel** You can just create the cream, heavy cream, like healthy cream sauce, with protein powder, like tomato as a base for almost everything, and then you have pesto and maybe carbonara or whatever, so you have those different types of sauces that you can put on your pasta, and this is what the robot in the future also will do. He will not do anything else. He will just use the base and the sauce, and you have this great word that I

was able to learn. It's mantecatura. So you mix the pasta and you shape the pasta. This is actually the menu logic behind it.

1:08:00 **Samuel** If you have a better one, and we talked about ordering just by voice and having an account, and the people will create your drink or whatever. Create your own. Oh, Sam, you're back. Have you been into the gym? Yes or no? No, I haven't been. Okay, let's put some more proteins in because you didn't have your protein shake, right? Oh yeah, absolutely. Or your protein shake done. You wanna have carbs in your pasta or not? Oh no, I'm on a keto diet. Oh, okay, no problem. Let's do avocado cream. So this can be a menu logic. Pricing logic, absolutely up to you. We have been cheapest in HP.

1:08:47 **Samuel** I don't think anyone was cheaper than us. We made it happen with 15 to 18 bucks between the menus. We had normal and a bit large. Our idea was having a large portion, sharing it together, which actually worked. But was not the best one. But it worked. Not for **Joshua**, but for me. Operational learnings. I think we gave you many. One of the most important is, in our business, I would say space is everything. What I mean is, the less space, the better. Not the more, the better. The more we can save costs in rent and don't need a lot of employees. The more we have automated in the back system, the better.

1:09:36 **Samuel** We have a kitchen that exists where the cook only has to do the baby jano and gives you a breath and disc, and the rest is automated kitchen. If you tap on Google Automated Kitchen, you're gonna find those companies. Brand identity and visual world, we gave you enough. Go through Instagram, go through the CICD and you will find everything you need. Existing course strategy materials as well. I think we gave you concept Jakarta, that's what you asked for. I'm having it on my list. I'm gonna provide it to you. What we have existing investor and expansion assumptions.

1:10:18 **Samuel** Yes, with time, not yet, but I'm planning the trip and everything, so we'll be provided in the next 2 weeks. And this as well. So strategic fit, those should be the questions in Group A at least to resolve. Those are a bit open questions. And again, 100% Yango, I know you already have 2 more questions. And that's good. That's good. We are not professional. We didn't have a lot of time to prepare those things to use it. So I didn't think of more. I did not think about key questions. In the end, you end up maybe with such a research, so what do you have to do? You have to simplify it.

1:11:07 **Samuel** And that's okay. So sure. Relevant. Relevant. But what is relevant? Or I ask another question: what is normal?

1:11:17 **Ana** I also feel like we already have a lot to work on. So, like, maybe focus on it and then maybe just after doing what has to be done, like, open it to more.

1:11:27 **Samuel** Please answer those. And the cultural fit. And you have some benchmarks as well. So here you have it. Here we have Van Gulis, the entrepreneur that inspires me a lot from Oakberry. Should be included. He's doing it right. He has a startup and he still says it's a startup. He's doing 360 million this year. He has 3,000 locations worldwide and he wants 5,000.

1:12:02 **Tiago** But I did not want to lack respect or twins. No

1:12:06 **Samuel** no. All good. All good. I would have told you. No. But we don't have to copy it. But we have to understand. And we have to learn from those failures. From all the failures in the world. Because we can't do failures right now. That's so cool. Imagine we would have

10 locations and we would tell you, "Oh my God, I have 2 locations not performing and 3 locations we have robotters," and, **Marius**, you want to be the calculator for 3 different restaurants at the same time? Hell no. We don't have that problem.

1:12:37 **Samuel** So the more we dig into the problems that the others have, the more we dig into why is McDonald's good today? But maybe why is McDonald's not winning in the next 10 years? I mean, if I told you Nike food, it's bullshit. Yeah, because that's still come back, you know? But if I told you Nike was where it is today, you would laugh at me, and I would even laugh at myself. But nobody knew. But then quickly, if you see the numbers and realize why they are where they are, everyone is like, "Ah, makes sense, yeah, of course, why they didn't do that," right?

1:13:12 **Ana** Actually, Oakberry is the same for me because, like, I was in the beginning, there is one in my neighborhood, and then I didn't even know, I didn't even know that it was that big here. Like, today walking to Campo, I saw like 2 cups of Oakberry in the street. I didn't ha... I had no idea that it was that big here. Like, I know that Brazil is trending and, like, the açaí is trending. But you already had açaí. Yeah. Okay, they're so basic for me, and then here it's like a very big...

1:13:42 **Samuel** But Brazil is trendy. Brazil is trendy. Barcelona Opera have been everywhere. So the thing is with those things, but you have to go with your product where it's exotic. And I'm happy to call this out, because this is the idea, this is why we want to go to Indonesia or the Philippines or whatever. Because we are exotic there. We are something new there. And if they see the racing and those things and the Bugatti and the racing car and the concept, I mean, you, we all know Asians. I love them for being so crazy. Yeah. Yeah. Because they have fucking emotions. And they tell you that they like it.

1:14:23 **Samuel** And they talk about it at home. And they don't shy away from it. So nice. Why not go where our energy is wanted? And this is the benchmark that we want to fulfill in group A. Questions are below, expected output are below. If there is something on top, please, no problem, but we do have a small comparison to Singapore and Dubai.

1:14:53 **Paul** So the financial model and business case. Let's see, actually, the present question. So this is more like questions like before, like **Samuel** told you. These are just to make a framework that you can work with. Ideally, if you use the captured interview as a strategist, it would be nice to have a financial model where you can then do some graphs, some visual things you can include in the presentation, and then underline what Group A has found and connect the dots with the Finnish market. So, yeah. Maybe not completely like, yeah, I do the calculations and then without the help of the others.

1:15:54 **Paul** Well, yeah, building the financial model can be something really easy. I

1:16:02 **Marius** started to, I mean, I'm thinking, when I think about the whole project, I'm thinking just a standard business case dashboard. Yeah, exactly. Whatever assumptions you want to make, and you're gonna straight up, and it's gonna be factually correct if the assumptions are correct. That's what I'm thinking as my main outputs. Yeah.

1:16:28 **Paul** Also do like five small things for me, like you have a cash flow statement, maybe for the first year or even on a monthly basis, where you see, like, okay, when is cash coming in, and then you have the CAPEX and OPEX breakdown. So CAPEX, well, we need to invest to have the store itself. This is really not depending on the others. No, because there you just focus on equipment, what can you lease, what can you buy, what needs to be done. So,

more of an overview. Like, at the end, it would just be a number, like, hey, we need, I don't know, 300K.

1:17:17 **Paul** And then you have the revenue model. It's a little bit, yeah, really, because it has to do with the pricing logic. So actually, I don't know, you have 50 orders, like who wants, I don't know, extra protein? How much are they impacting the revenue? This means, like, the revenue model, like how much flexibility or how much depending on extra stuff is depending on the revenue. These things, how are they influencing it? And, yeah, pricing assumptions. Yeah, I think here. Do

1:17:55 **Marius** you have any idea regarding pricing? Because when you tell me to sell a cappuccino, I'm gonna think 5.50 to 8.50.

1:18:10 **Paul** Do a price like 5 francs or 5 euros or 5 rupees or I don't know, and then based on the research of them, adjust it. Adjust it. Because it doesn't matter if it's 10 francs or whatever, we can price it how we want it. At the end, we need to have at least, yeah, some money left. You know, like, it needs to make sense. And also, they will focus on the willingness to pay, like our customers, what are they willing to pay for a pop-up?

1:18:42 **Paul** But we're gonna integrate this in our financial model and then see what is missing. Maybe we overshoot and then we're already highly profitable, maybe not, where we can tweak something where we can, and then save some money. Yeah. And yeah, this is also really like the backbone here, is to also have like a cost control system. Well, maybe you have like a budget, I don't know, 300K for the location. But at the end, sometimes you end up with 500K, and then you're like, "Oh shit, okay, what is really important?" And again, you sit on the table, you adjust the CAPEX, and then

1:19:22 **Matthieu** Yeah. Yeah. Yeah. I have a question which is probably relevant for the financial model, as well as if we want to look into the robotic aspect of the expansion. Do you have a floor plan of how the location in Zurich looked and what the measurements of it were, and how many employees it took in Zurich? Yeah. So

1:19:50 **Samuel** We don't have a floor plan? No? I mean, we have SBB provided something, no? We have different plans, but the thing is, that's what I wanted to say: a coffee pit stop at the harbor of Monaco can make sense. Can it be a robot who does coffee? It exists. Yeah, why not? So the calculation should really be based on the main location. And the main location is starting at least from, I would say, 40 square meters, but you have to, in the kitchen, you need some place where the truck driver brings food to, so where can he stop? Does it make sense, etc.

1:20:34 **Samuel** We could give you real estate and tell you to build it around that, but again, then we would do a job that has to be done by someone else. So I would not focus on a revenue model that you have to pitch to investors has to be one that is a bit open. There is some room for having a gap. Nobody's demanding you to do a revenue model that is correct to like 10 bucks. No. It will be like plus or minus 5 figures. Yeah. So maybe even 6. But if it's 100,000 more at the end of the first year or 100,000 less, dude, we're not gonna die.

1:21:22 **Samuel** But we have to be as accurate as possible. So what we do is to be a bit more conservative, to be a bit more Swiss with the numbers. I don't like the Americans in Silicon Valley. Like the hockey stick. Yeah, we don't know. And I think you had some great examples in school for being more on the realistic side. And you can have the insights from the Corsa HP. Yeah.

1:21:52 **Paul** So in Corsa we had 2 cooks and 1 barista.

1:22:03 **Samuel** No, in the end we ended up with 1 cook and 1 barista. Yeah, and on average. No, average. 1 cook, 1 barista, and the barista even did the cashier. Yeah, because we did not have a screen.

1:22:18 **Paul** Yeah, so, and it worked. It worked. But no. I don't know. We can really focus just like, how can we start again? Like, because it's startup phase again, ramp-up phase. And then we focus on the robotics stuff. That's why we have the second phase. So...

1:22:42 **Samuel** But I think you have to know you're not doing the first month and then we threw it all away. Because the first month now, like, those things are so important. Imagine I come to you in 4 weeks. We have the investor ready, and he wants to build it now, and he needs all the documents. We will provide the documents to build something today. And the second phase is to build something for tomorrow. Our job is to do both things at the same time. Trust us, we will be able to do that. Otherwise, we wouldn't do it. I would not do that if I was not sure.

1:23:22 **Samuel** But I need to be keen on that you guys can focus on this month for those things. To have a revenue model. In good hands. That's what we need. The Swiss trust that we have, let's build on that. This is what the investors believe. When they walk in here, and he will be here on the ninth chair, or there in the back, three people, you're gonna explain your revenue model. Maybe. Can it happen? If you don't want to, I will explain it. So you have to explain it to me. Yeah, it has to work out somehow. Yeah. So he will see, oh yeah. Wow, makes sense. Yeah, around 300,000 profit, yeah, okay.

1:24:02 **Samuel** And then when the robber comes, yeah, 30% more profit. Oh, okay, nice. That's all.

1:24:07 **Paul** Yeah. Yeah. And based on my experience, like the financial model. So it's always a guess in the future. But it's like how, like, some kind of sense. Yeah, I understand. Make the numbers relatable. Yeah. And it's also nice to have, like, now it's gonna be your first time to do this thing. But then in the future it will be like, oh, okay, yeah, let's, I will do it quickly and, like, everything makes more sense. But now it's just the first time you need to do it, I think.

1:24:41 **Samuel** **Joshua**, I don't know. Compranking, how many companies do you go through a day? I don't know, maybe 10. So 10 companies a day, from what he told me, check somehow the numbers and then look into that person's eye and be like, is this guy actually able to do the job and will we finance the new 5 electric trucks? Because you're doing calculations in terms of electric trucks with electricity prices from today. What happens in the next 3 months? It's more expensive. Did you calculate with more expensive electricity? No. But he gave you the money. Sure. Maybe. In 3 years, do you know the price of electricity? No. No. No. Consuming.

1:25:25 **Samuel** We can also take oil. Yeah. So we don't know. So he has to somehow make the calculations to make it relatable somehow. To have trust in the numbers, and at the end he will look into Mr. Fabian Müller's eye and he would be like, yeah, Fabian is a good guy, we give him the money. Yeah. So it's, so let's do a good job here. And the good job here, and it will work out.

1:25:54 **Tiago** Just to record for later? Yeah. So it's in the transcript. It's already recorded. Yeah. It's just like I do have contacts for the robots part. Yeah. My cousin, who works in a company

that makes custom robots for PMI, for Philip Morris as well, among others. And my father, he is managing this robotic side at Philip Morris as well. But this past year, he has been to so many countries where they are building the robots, so I can try to get some contact. Just to record that if we need it later, so it's

1:26:37 **Samuel** Why not? Why not? Yeah. Again, what I also like in business, what I had to learn in the past 3 years. Was ist Mehrwert und Mirabelle? Service of value. If you have contacts like this with whenever in real life, don't go to that person without having everything sorted, because in, I think, in that field, at the end, you don't need favors. Favors will not be enough. It's all about: can this person make money with you or not? And if it's not money, I don't know, save 1,000 lives or at least build infrastructure. I don't even know. It's about trust. It's about trust. So first, we have to trust ourselves, become a team.

1:27:31 **Samuel** And then, yeah, why not? Absolutely. You will feel the team very soon. Welcome. Be patient. What else? Did we forget anything? No. I think that's it. I think you know what to do. Ask us any time. Please don't ask us 2 nights before the handover. We are not in school. I'm not gonna put the topics to the certain person. I think you're able to do that by yourself, and be fair with each other and please make sure that everyone has a topic and to write it down.

1:28:13 **Samuel** So once you started work, so **Jonas** knows as a data analyst maybe where to get another analysis, or **Marius** as a calculator, he will need probably some research so to be able to have that provided for him. So split the team is split team A and Team B exists. You can start with giving you the topics that everyone should have. And I think then the subgroups will start existing. And yeah, I wish you also a bit of luck. We start or we see each other just to make sure, because last time we forgot it. Next Monday.

1:29:00 **Paul** Do you have a room where you work in, like with all the documents, or where you can upload stuff?

1:29:06 **Speaker 1** That was something we wanted to ask. So you could either, we could have a drive, for example, or you could provide us, I don't know, like a playground in the drive where we can actually upload some document or let us access something of

1:29:20 **Samuel** Then we will provide you a playground on Google Drive. Yeah, okay. Do what you need to do there. Yeah. You can also, when it's Figma or something else, you can just upload it afterwards. Do you

1:29:34 **Marius** I noticed you always use the Microsoft products? Me personally? Like, this is not about the project. I personally always use the Microsoft stuff. Yeah, but

1:29:46 **Tiago** You can upload them to the Google Drive. Yeah. Do you? It works excellent. Because with our uni account, we cannot work with people outside of uni on the same documents. Surely you can. Really? Surely. I've done it.

1:30:04 **Marius** But, like, not regarding the project, do you generally like Google more?

1:30:10 **Ana** Yeah? Yeah? Yeah, and for me, like, Gemini and Google. Google is better too.

1:30:14 **Tiago** Explained. Having some problems in Microsoft from

1:30:17 **Ana** here and my community, so it's all crazy.

1:30:26 **Samuel** Yeah, but when I'm resolved. Yeah, so you have the capsule file here. And I divided it by my pre-made folders, which can make sense or not. But usually in the company,

yeah, I can make it too. But in the company, we work with those to have an overview. So I would not build any more. Trust me, we've tried it for years, and it's not necessary.

1:30:52 **Samuel** But once you go to prototypes, which I can, yeah, Derry can start building, we either start on, I would say, either team A and team B, and then every team has its own structure, which ends up messy, 100%. Or you start with everyone having their own folder and you provide each other documents, or what you can do in the end, and this is why I love Google, you press this button here. Sorry, here, and you can share. And you can decide how you want to share: as a viewer, as a commenter, or as an editor.

1:31:29 **Samuel** So when you give the rights as an editor and copy the link, you drop the link in your group chat. Hey guys, I just created this calculation. Can you please, **Paul**, have a look over it? Whatever. **Paul** can click on the link and it's in that file. If he's in that file and you as well, you're gonna work together on the same thing up here. And you can see it. And you can see it. So, but like

1:31:59 **Ana** I feel like maybe for Team A, maybe it's better, like, re-deciding the line, and then we do a proposal, and then each one puts their part of the research there. Yeah. So then, like, for the first midterm presentation, yeah, we have, we already have, like, the body of the presentation, so that then we don't have, like, 2 days before we put everything together and see that we're repeating things. I agree. Like, we like to do the topics, and then that's my topic, that's your topic, and yeah, maybe it's better, like, for the midterm.

1:32:40 **Samuel** Mm-hmm. Okay. Yeah. Yeah, that's up to you. I will share you the folder where you can do whatever you need to do. I will put this in, and then it's up to you. Derivative, 10 October. Was haben wir da?

1:33:02 **Tiago** The next deadline?

1:33:05 **Speaker 1** From a uni perspective? Yeah. Oh, by the way, we had one question regarding the draft review. Intermediate, yeah, we had one question regarding the intermediate presentation. Because we had, like, the meeting with ICO today, and he told us, yeah, that's really cool, but that's really ambitious to have everything done by the 22nd. And the thing is that from his side, what he wants at that date is not necessarily to have an overview backward of what we did, but what we're gonna do, actually. And my question is, you want a

1:33:40 **Samuel** A presentation on how it goes on?

1:33:42 **Speaker 1** Well, a bit on what we've done, but mostly like, okay. We did some stuff. How can we build on that, and what's the overview for the next 90 days? And therefore, I just also want to make sure, because it has its own deadline for the capstone, like for the uni, but for Corsa, the deadlines might be different. Like, the deliverables, you really need them because you're gonna talk to the investor two days after, and you cannot wait a couple of more days. I just want to make sure that we actually coordinate and that we have a workload that we can actually deliver, like what you expect from us.

1:34:20 **Speaker 1** That's what I'm saying before.

1:34:35 **Samuel** I think Heiko doesn't know what's possible with AI in the end. I mean, once you did the research and once you have the documents together, this, I don't know, this goes so fast. Yeah. Yeah, true. This goes so quick. And I'm happy to show you if you don't know how.

1:35:02 **Samuel** I think in the, you have the full business scope package interim right presentation, which you already have, so you just have to put it in a presentation. Once, we didn't work at all until today, like, we just defined and organized, so we start work now. So we have, in my opinion, not a difficult task. Until the 14th or 12th, we can work and we can provide each other documents and build this drive and fill this drive with what we just talked about. And then we go over that. We have a meeting together and we're gonna go through, and you will find those evidence gaps that you may have or found already.

1:35:53 **Samuel** And then you're gonna finish those and have at least another week left to just make a presentation of what you all, like your 6 people, have put together, and then you need maybe 2, how do you say, 2 papers on the presentation on what's the outlook, and we already defined the outlook. Yeah. Yeah. I don't know. That should be fine. Anyway

1:36:22 **Speaker 1** We're just gonna align regularly just to check if we're within the deadlines and if we just work as expected, so wouldn't be concerned. Yeah. Absolutely. It's always

1:36:36 **Paul** Funny, like, the university. I mean, they put you through 4 years. What's the bachelor?

1:36:43 **Samuel** 3 to 4, depends on pure stress, no? Yes. Pure stress. Yes. Like, overfill presentation. How many presentations have you been looking at? You don't even know.

1:36:53 **Tiago** This from the beginning.

1:36:55 **Matthieu** Per course. It's only really bad during the assessment afterwards. It's okay. Depends.

1:37:00 **Tiago** On the courses you take. I think.

1:37:02 **Samuel** Now where you have actually something that you could work on, he's worried? I don't know. I'm being able to. No.

1:37:10 **Tiago** Heiko is, it's fun that Heiko is saying that. I had a class with him last semester. We had to do a presentation every week. Every week. Same presentation. Not that different, but same.

1:37:27 **Marius** And my son of jobs is a little 5 to s.

1:37:31 **Samuel** Yeah, no, I think not meaningful. No, I mean, let's have this conversation in a minute. And then we at least see where we're fucked up or, oh, actually, 70% is done. Okay. Okay.

1:37:51 **Tiago** It's really fine. The goal is to do everything. But just in case, could

1:37:59 **Samuel** You never talk about that.

1:38:01 **Tiago** No, just in case. If we were to cut down something. It's not the goal. We won't do that. But just so we know where the most relevant objectives are for you. What the ones that you, because not all of them are as important. I think, yes, no, it is. It is. I think it is, yeah. It absolutely is. It wouldn't

1:38:22 **Samuel** Give you that if it was not important. Okay. Really, there were so many things that we could focus on now. I mean, I could talk with you about what would be gifts for the guests that come, yeah, trust me, I had also this type of what you have here is really the most important. Without that, you don't build a startup, you don't build a company. And you need to learn that, guys. I want you to learn that. I want you to know those things.

Because hopefully next year, project is done, you fulfill your dreams, one is doing a master's, the other one is traveling around, one is coming to new whatever.

1:39:00 **Samuel** You're gonna see that brand living and you can tell yourself, "We build on this thing." And those are the fundamentals. So we either let people noise in our head, and I'm not saying it's a bad noise or the comment doesn't even matter, if it's from Heiko or not, it's noise. And the question is, do we let noise in here or not? On the whole floor, I think there's one blonde girl still working.

1:39:25 **Ana** Yeah, she was here.

1:39:26 **Samuel** Right? Yeah. She was still there?

1:39:28 **Ana** Like here? Yeah.

1:39:29 **Samuel** Oh. I don't know why, but I think she has a good reason to do so. She could, her head is thinking, "Let's go home," blah. She's not doing it. I don't know why, but she's different from the others. And this is the mentality that we need in here. We have to be different. We need, you don't understand what my parents told me. Sam, what the fuck are you doing? Or what the f... What is course? What do you mean, what Brazilian parents? You were talking about it today. Yeah, so it's normal. That's normal. That's absolutely normal, and don't let that in.

1:40:05 **Tiago** No. I think proving the haters, the non-believers, wrong is the biggest source for motivation.

1:40:13 **Samuel** If you did it once in your life, you will be insane in a good way. And since it happened to me, maybe more than once. Yeah. I think that's just another book to read, and one day it's done reading and we begin with the next chapter. I think there's also projects together in the master's and in others, so yeah, for sure, see you again. Let's do it. Let's go. Let's have a drink. Let's have a drink.
